Sorry to say the old farts are quite adept at chasing the young away.
You will give up. You will be podded if you do not surrended as in
Invasion of the Ham Snatchers.

SB DX @ ALLBBS $OPDX.224
Ohio/Penn DX Bulletin No. 224

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 224
BID: $OPDX.224
October 2, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1VWL, WA3RHW, K4UTE, KJ4VH, K9AJ, WA0PUJ, 4N4XJ, DF4RD, DL9GOA & DX News Letter, F6AJA, G4BUE & DX News Sheets, JA1IDY, OZ5AAH, SP5EWY, VE1UK and VE9RHS for the following DX information.

3A, MONACO (CORRECTION). John, K1VWL, will be here from November 21-28th, not October 21-28th as was reported in OPDX.223. John will be in BY-land during October to attend the Beijing DX Convention. Please refer to OPDX.223 for further details.

4U/KC0PA QSL CARDS (UPDATE). Rudi, VE9RHS, QSL Manager for Major Tim Hardy, KC0PA, reports that the 4U/KC0PA and KC0PA/S0 cards are being processed, but unfortunately a small problem has developed. On Tim's return from the Western Sahara, his laptop was damaged and is now not functional. Ordinarily, this would not be a problem, but the diskette that was mailed from the Western Sahara with the log updates has yet to arrive (it has been 2 1/2 months) and he feels that this particular disc will not arrive. So now he must wait until Tim's computer is fixed and another disc can be forwarded to Rudi. Meanwhile, all QSL cards that have been received for QSOs up to and including June 5, 1995, have been processed and mailed out. If you had a QSO with Tim between February and June 5th and have sent a card, they should arrive at your QTH within the next 2 weeks. However, QSOs from June 6th through August 3rd will have to be held until a log disc is received (Please be patient.). ADDED NOTE: The 4U/KC0PA operation is good for DXCC accreditation, but the KC0PA/S0 operation was not accredited.

4X4NJ (CQ 160M - North America). Riki, 4X4NJ, states he will be active daily at his sunrise. On Friday and Saturday, he will often be active even earlier (about 2 hours before his sunrise). He will stay on the frequency as long as there are conditions (usually for 15 minutes or more after his sunrise). Riki's main goal is 160M WAS. He still needs Nevada, Utah, Idaho, Oregon and North Dakota. Riki states if anybody

hears the West Coast calling without his response, he would appreciate QSP, etc. He will transmit on 1828 kHz, but may QSY possibly within 1827-1833 kHz range depending upon the QRM. He will listen from 300 Hz to 1 kHz above his transmit frequency. He has supplied the following sunrise times (UTC):
OCT 1-0338, NOV 1-0401, DEC 1 -0427, JAN 1-0445, FEB 1-0438
OCT 10-0344, NOV 10-0408, DEC 10-0434, JAN 10-0446, FEB 10-0431
OCT 20-0351, NOV 20-0417, DEC 20-0440, JAN 20-0444, FEB 20-0421
QSLs via WA4WTG, R. Kaplan, 718 SE Third Lane, Dania, FL 33004. Riki can be reached via E-Mail (rikik@shani.net), Packet (4X4NJ@4X4HF.ISR.MDLE) or via a letter to his QTH (Riki Kline, Naaleh, 71932 D.N. Modiin, Israel).

5A0A OPERATION CANCELLED. SP6RT and SP6AZT were in Benghazi but had to cancel their planned activity as 5A0A because of the political situation NOW in Libya. They are now back in Poland.

8Q, MALDIVES. The DX News Sheets report that Rudi, DK7PE, is active as 8Q7CW, but his length of stay is not known. He has been on 160 meters (1828 kHz) between 2230 and 2315z. Also check, 3505 kHz between 2200 and 2345z, 7005 kHz at 0050z, 10105 kHz 2115z and 14025 kHz at 1545 and 2030z.

CY0, SABLE ISLAND. CY0TP is active with a team of four operators which include Wayne/VE1CBK, Ken/VE1RU, Don/VE1AOE, and Gary/VE1RGB. Their activity is expected to last for 10 days (October 10th). Please use the following three QSL routes: (a) All 6-metres, VHF, UHF, Satellite and EME QSLs go to, Don Roland, VE1AOE, PO Box 1257, Truro, Nova Scotia, Canada B2N 5N2. (b) HF QSOs (including SSB, CW, RTTY & other digital modes) go to, Wayne King, VE1CBK, 63 Brook Street, Lake Fletcher, Nova Scotia, Canada B2T 1A5. (c) JA (Japan) and HL (Korea) HF QSLs (including SSB, CW, RTTY & other digital modes) go to, Zorro Miyazawa, JA1AJT, Box 8, Asahi, Yokohama 241, Japan. (Read OPDX.222 for more details.)

IOTA NA-147, CARRIACOU ISLAND (Grenadines). After the J3A CQWW SSB Contest operation, K9AJ, W9IXX, and KA9RHK will operate CW, SSB & RTTY from here using the callsigns J3J, J3X and J3Y respectively. They will pay special attention to the IOTA frequencies, using two rigs, a kw amp & multiple antennas. Dates of the operation are October 30th-November 3rd. Note that the above J3 calls may be used from Grenada for testing prior to the contest, but they will be on NA-147 only during the above dates. QSLs for all three calls go to K9AJ.

JX, JAN MAYEN. The DX News Letter reports Marit (YL), LA4CJA, and Terje, LA3EX, will be active as JX4CJA and JX3EX on 80-10 meters, from now until April 15, 1996.

OX, GREENLAND. Mako, JA1OEM, arrived in Greenland on September 24th and plans to stay and be active as OX/JA1OEM until October 16th. His activity will be as follows: CW - 3508, 7008, 10108, 14008, 18113 and 21008 kHz and SSB: 3754/3795, 7058, 14130, 18113 and 21180. This is the 20th country Mako has been active from since 1988. He plans to begin issuing JA1OEM

Awards which will require more than 3 country QSOs. Details of this award will be forthcoming. QSL to his home call.

OY, FAROE ISLAND. Ben, OZ5AAH will be active as OY/OZ5IPA, from November 1-6th. He will also be an entry during International Police Association Contest from November 4-5th. Ben states contacts with him count towards several special diplomas and awards (such as Sherlock Holmes, Hercule Poirot, Windmuehle, etc...). QSL via homecalls. Ben is bearing all expenses for this DXpedition himself and will be grateful for any donations to: PO-box 96, DK-1004 Copenhagen K.

S7, SEYCHELLES. Gerard, F2JD (ex-5V7JG, 5Z4JD etc...) will be here for 3 or 4 weeks, starting on October 15. He is waiting for a licence. After that he will be in Malagasy (5R) for, at least, 6 months. Gerard's main purpose for being at these two locations is work, but he will try to operate, of course. QSL via F6AJA.

T32, CHRISTMAS ISLAND (EASTERN KIRIBATI). Lothar, DJ4ZB, is currently active as T32ZB. His length of stay is unknown at this time. He has been heard on 3799 kHz around 1030z and 0230z. Check 20 meters (14192 to 14220 kHz) between 0100 and 0230z. Also, check 18145 kHz before the 20 meters time. QSL to callbook address.

VP5, TURKS AND CAICOS. VP5T will be on the air during the CQWW DX Phone Contest from October 27-30th. It will be operated by KE2OP, N2VW, and WB2YOF. Each operator will be on the air before and after the contest from October 24-31st, using VP5/homecall. Their operations will put an emphasis CW and on the WARC bands. All QSLs for VP5/homecall go to each operator's homecall. QSL VP5T for this operation only to N2VW via the ARRL W2 bureau or direct to his callbook address with SASE or SAE and postage.
Also, look for The North Florida DX Association to return to VP5 (Providenciales) for the CQWW DX Phone Contest. Their callsign will be VP5S. Operators will be W3ZNB, KC4FWS, N4KE, NU4Y, WB4EYX, WB4KSP, WB4MAI, and WR4K. They will sign VP5/homecall before and after the contest. QSL via K4UTE.

XZ, MYANMAR. (Excerpts from a news release by Tim Totten, KJ4VH):
A group of three amateur radio representatives, JA1BK, OH0XX and OH2BH, were very successful in demostrating amateur radio for the Myanmar government representatives. The establishment of amateur radio is now well underway, and the first Myanmar citizens are expected to appear on amateur radio frequencies towards the end of 1996. The detailed proposal for establishing amateur radio service was well received by the representatives of the State Law and Order Restoration Council as well as the Minister of Telecommunications.
The team of operators' day was very busy with a lot of ceremonial activities--including meetings with two Myanmar ministers--the group was able to make some 1000 QSOs from the Government facilities in downtown Yangon. The reported callsign used was XZ1X. The operators used a Yaesu FT-900 and Dentron GLA-1000 with R5 for equipment. The presentation of Yaesu FT-900 was made on behalf of Yaesu Musen Co. as a training aid

for future local amateur radio operators.

ZONE 2. AH9B, KG4DX (KD0XK), N0AFW and WA0PUJ will operate in the CQWW SSB Contest from Zone 2, located in Labrador City, Labrador. They will use the callsign VO2WL and enter the contest as a Multi/Single. They will operate before and after the contest between October 25-30th using the VO2/homecall on mostly the low bands. QSL via WA0PUJ.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

The following is a QST

A hate message on packet is also a computer virus. An FCC
commissioner says no to cutbacks and why you can't use a cellular
telephone on an airplane. All this and more on Newsline report
number 946 coming your way right now!

(*****
HATE MAIL VIRUS

The neo-Nazi packet messages calling for genocide against
minorities is a radio relayed computer virus as well as a message
of hate. So say several European hams who have been tracking the
messages ever since it first appeared and have now broken its
source code.
DL2HBX reports via packet that the virus triggers only if a
receiving station reads the hates messages in the "remote on"
mode. This says Uli, causes automatic regeneration of the hate

message, passing it right back into the system and on to the next unsuspecting victim.
Several Austrian operators who have intercepted the messages are now saying in their packet postings that the virus can also mutate. That is, it can regenerate the same text under a brand new bulletin identifier. This says the European packet operators, give a system operator a false sense of security. He thinks he has cornered and killed the virus laden message. But by the time he has acted the bulletin has literally left his system and taken on a new life of its own.
Many Europeans hams are now openly speculating that the source of the original message may have been from other than ham radio. Some believe it got its start on the Internet and found its way onto the ham bands through someones unattended packet gateway tied to an internet provider. If this proves true, it could mean that a non ham was the actual writer of the hate mail and its virus sub-routine. It also means that unrestricted ties to the internet could be hazardous to the health of packet radio.

(*****
UK GOVERNMENT SAYS YES TO HF NO CODE

The radio regulatory agency of the United Kingdom says that it will backs worldwide no-code licensing for high frequency ham radio operations. Word comes in the form of a notification to the Radio Society of Great Britain from the United Kingdom Radiocommunications Agency, the British equivalent of our FCC. According to the RSGB, and as reported last week here on Newsline, the New Zealand government is to propose the abolition of the international requirement for radio amateurs to pass a Morse test. This, prior to being permitted to use the HF bands. The RSGB says that it now understands that the government of United Kingdom intends to support this proposition.
The Society says that it has protested to the Radiocommunications Agency the government decision to support New Zealand. RSGB contends that it runs contrary to the views of UK radio amateurs expressed in a survey carried out by the Society in 1993. The RSGB says that the governments pro code-free position also appears to ignore the policy of all three regions of the International Amateur Radio Union.
But it now appears as if several of the worlds most prominent governments care very little about what the current ham radio community wants. Both New Zealand, and now the United Kingdom are telling their hams that whether they like it or not, no-code is a way whose time has come.

(*****
QUELLO vs. CONGRESS

Long-time FCC Commissioner James H. Quello says that he opposes a proposal by Chairman Reed Hundt to close some Commission offices

and reduce staff. Speaking at a press conference, Quello said that while in principle he supports the idea of streamlining commission operations when possible, that he is not prepared to support Hundt's proposal, especially in the area of staff reductions.
Quello said he is very concerned with the rushed timing of Chairman Hundt's administrative approach. He says that he believes that any reductions should have been discussed with Commissioners in advance of a one-day notice, particularly while Congress is in recess and some Commissioners are on vacation.
In Quello's view, any reorganization of this commission must take careful account of its core functions and assure that their integrity is not compromised. Commissioner Quello adds that he not
sure the plan described by Hundt will achieve this, particularly in light of the sharp disagreement that has arisen over the staffing and functions of the field offices of the Compliance and Information Bureau.

(*****
NO MORE CLEVELAND SCANNING

If you live in the city of Cleveland Ohio and own a scanner radio, you soon will have very little to listen to. This is because Cleveland is the first American city to fully implement a fully encrypted trunked radio system that is specifically designed to keep the ears of the general public out.
According to a story by Stephen Bellamy, AA8MX, appearing in Popular Communications magazine, Cleveland's twenty municipal divisions, including police, fire and emergency medical services will soon be on the 800 MHz digital trunked system. Once fully operational, the only way to eavesdrop will be with a special receiver manufactured by Motorola. A receiver that is not for sale to the general public, and whose operational technology is a closely guarded secret.
And even if someone where to get their hands on one of these next generation of two way radios it will do little good. In addition to the receiver he would also need the proprietary decoding algorithm that Cleveland is making available only to those who they authorize to listen in.
Scanner enthusiasts, ham radio operators, and the general public
will not be included in this group. Nor will they be able to buy new radios to receive the digitally encoded messages and Motorola appears unwilling to license its technology to anyone providing hobbyist monitor radios to the general public.
So one the new Cleveland radio system is fully operational all a scanner listener will hear is a some hashy sounding noise if they use their radios to tune in. More information on what's happening in Cleveland can be found on page 14 of the October

issue of Popular Communications Magazine.

(*****
HAM COLUMN CANCELED

Speaking about Popular Communications Magazine, word that a weekly column on ham radio, communications and broadcasting written by Pop Comm editor Chuck Gysi, N2DUP, has been canceled due to budgetary constraints at an Iowa newspaper. The column, which promoted amateur radio activities in eastern Iowa and western Illinois for more than five years, appeared for the last time on September 3rd. This, in The Hawk Eyen, a daily morning newspaper in Burlington, Iowa, with a circulation of about 20,000. Gysi wrote 284 On The Air columns during its run. It is uncertain at present whether it will picked up by any other publication. Gysi's ham column was one of only a handful that appear in newspapers across the United States.

(*****
REPEATER MEETING

October 7th may be an important day for amateur radio. That's when an ARRL sponsored repeater coordinator's conference takes place in St. Louis, Missouri. The meeting will be a chance for repeater frequency coordinators from across the nation to discuss issues and problems of mutual concern. Some of the issues likely to come up promise to be subjects of disagreement.

Depending on where you live in the U.S., certain parts of amateur frequency bands may be designated for particular modes of operation, such as link frequencies or amateur television. The same frequencies are often used for different types of communications in different areas... this, even though the ARRL suggests a nationwide bandplan.

"There's just no way to do a national band plan on most of the bands because of the what's going on locally." Dave Baughn, KX4I

Dave Baughn, KX4I, is frequency coordinator for the Alabama Repeater Council. He expects bandplanning to be discussed during the meeting.

"There's a possibility that the ARRL will try to push a national bandplanning on us. I think that will be resisted very vigorously." KX4I

The possibility of licensing repeaters, something that was done previously, may also come up. It's an idea Baughn strongly opposes. Developing a single point of contact between coordinating groups and the FCC is expected to be a main topic. Baughn sez he hopes coordinating groups nationwide will be able to develop a better relationship with the FCC.

"I hope that I get to meet some of the other coordinators and get some of the, hear some of the problems they are having and talk them over a little bit to help us out here." KX4I

Though there could be heated discussion on some subjects, Baughn calls the St. Louis gathering a good idea.

Baughn will be one of about seventy representatives of repeater councils from around the country attending the meeting. What these people decide will have a direct impact on your day to day repeater operation for decades to come. Newsline is teaming up with World Radio Magazine to bring in-depth coverage of this meeting to the amateur public.

(*****
NO CELPHONES ON AIRPLANES

Not only can the captain of a commercial airliner ban you from using a cellular telephone while in-flight. So can the FCC. In fact, the commission did so back in December of 1991 when it issued a Report and Order on CC Docket 88-411. There, it totally banned the use of all cellular telephones on any aircraft while in flight.
The agency did not take this action primarily as a safety precaution because it feared interference to an aircraft navigation and communication systems. That came a few years later when the airline industry itself conducted an in-depth study of the potential problems caused by cel-phones and other electronic devices.
Rather, the prohibition was put in place to protect the cellular service itself from interference to multiple cell sites because of the wide coverage possible from altitude. Any ham who has ever operated a two meter hand held from a private plane knows that its possible to talk on several repeaters simultaneously from only a few thousand feet up. Can you imagine the havoc that even a low power pocket phone would have from say 30,000 feet?
Well, the FCC did and as a result the language in the Report and Order in docket 88-411 is very unambiguous. It simply says No. You cannot operate a cellular telephone from any aircraft -- large or small -- commercial or non-commercial -- while that aircraft is in flight.
The FCC did not ban the use of cellular telephones while a plane is on the ground, and many private pilots carry pocket phones for use after landing. But most airlines and then the Federal Aviation Administration took up where the FCC rules left off. They have instituted an across the board ban on the use of any transmitting device including cellular telephones and ham radio transceivers on board any commercial airliner at all times. Even when the doors are open and the aircraft is standing at the gate.

(*****
ELT INFO NEEDED

K3GPJ, says via packet radio that he is looking for information on available aircraft band receivers to monitor for downed aircraft
emergency locator transmitters. He hopes to interface this with a mountain top repeater and would like to hear comments from anyone who has done this.
He specifically needs information on the receiver used, how it was interfaced, and what problems have been encountered in the operation of this monitor. You can contact K3GPJ at his Callbook address.

(*****
SAFEX ON MIR

German Cosmonaut Thomas Reiter, DF4TR, has arrived on the Russian Mir space station with the new SAFEX 2 repeater in space. Reiter will stay on the Mir for 135 days and as time permits he will operate as on 2 meters as DP0MIR and also install the first module of the new SAFEX Two, 70 cm space repeater. This section will only be capable of FM voice and frequency shift keying at 9600 Baud for packet relay operation. This latter mode using the G3RUH system.
Thomas Kieselbach, DL2MDE, and Joerg Hahn, DL3LUM, of the Ham Radio Group of DLR -- that's the German Mission Control for EUROMIR 95 -- they have announced that there will eventually be regular ham radio video transmissions from Mir. This, by means of a new "SSTV" mode that will transmit pictures, taken by a still video camera aboard MIR, in AX.25 packets.
Kiesenbach and Hahn say that the new protocol will not generate the normal line by line video. Rather it uses a random sampling system. This makes it is possible to have an idea of what the picture looks like after a short time. The resolution improves as the transmission is being completed.
Eberhard Backeshoff, DK8JV, author of the well known JVFAX program, is in charge with the software development of this new system. He will make a receiving program available as soon as it is completed. He asks that nobody send any requests right now, but stay tuned for further information on its availability, which will be released soon.
As to when the SAFEX 2 FM voice and packet repeaters will be on the air from space? This information has not been released. At least, not yet.

(*****
SATELLITE FAILURE

Chile's first satellite, FA Sat-Alpha, failed to separate from the first Ukrainian satellite SICH 1 after its launched from the Plesetsk cosmodrome in northern Russia. Several attempts have been made to separate the two satellites, but these operations have not been successful. If the Chilean satellite does not separate, the Ukrainian satellite will still be able to operate.

FA Sat-Alpha will not be activated until it separates since it is programmed to start its functions after being jettisoned away from the SICH 1.

(*****
DX

Operators of the Frankford Radio Club that will be active from Antigua as V26B in the CQ World Wide SSB Contest operation on October 28th to the 29th. There will be two awards available for contacting V26B. A regular certificate for working them on 10 through 75 meters during the contest and a special certificate for contacting them on 160 through 10 meters. QSL requests will automatically get you the certificates if you qualify.
Also, G3MRC has returned to Ziare as 9Q5MRC and has been heard on 18.081 MHz around 18:45 UTC. Joe also has plans to operate from Burundi at a later date. Also active is 9Q5TR, who can sometimes be found on the 14.226 MHz DX Net around 22:30 UTC. QSL both to their Callbook address.

(*****
MILITIA NETS

With all the talk about militia groups in the news these days, it may not be much of a surprise to know that several of these groups are taking to the ham bands. According to several packet radio postings, a national high frequency militia radio network is being formed. Those behind the net say that they are doing it in the hope that once initial contact between the various elements of the militias is accomplished they will each develop their own net times and frequencies.
The first of these regional militia nets was scheduled to begin earlier this month on Friday at 22:00 eastern time on 3960 KHz. This is followed by a national Militia Net intertie at 22:45 Eastern Time on 14.275 Mhz. If these frequencies are busy -- and if the net tries to use 14.275 you probably will hear some gunfire you might want to look up the band. The nets are reportedly controlled from -- and we quote from their press release -- Dallas -- in the free Republic of Texas.

Gary, I have admired some of your comments on digital matters, but
you disappoint me here. France is a member of NATO and has been ever
since NATO was established. They do not place any part of their armed
forces under NATO command except on an ad hoc basis, for instance,
in air strikes in Bosnia. Other members, including the United
States, do have some of their forces under NATO (which has always
meant U.S.) command, but many U.S.forces are not under NATO.

7. Re: The sorry state of HF digital was(Re: Drop Code? No Way!

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-01 00:00:00 UTC
From: wautelet@innet.be
Message-ID: <AC9477D9966866155@pool02-25.innet.be>
Source record: 237542
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc

I read your post abt the state of Ham radio and it's future.

I'm pretty sorry about that future myself.

I'm a ham since abt 1979 and involved (too) heavily into
packet radio when it all started (with Vancouver board,
TAPR etc). At those times, 1200 Bps was quite good as the
average affordable phone modem was still duplex 300 Bps.

Nowaday, it's still 1200 Bps at the user level with a few
link at 9600 mostly half-duplex.

Use of the 23 cm band is very weak (and we have 60 Mhz free there !).

Most hams are still using 2 meter / 1200 Bps access to the "network".

Anyone with a V34 access to their internet provider would laugh
looking at the speed of current AX25 ham "technology".

I'm living in a higly populated and developped country, without
hurricanes or earthquakes and emergency services have all
communications equipement they could dream off, yet the
red-cross maintain some ham organized support that (hoppefully)
is never used "for real".

So the state of Ham radio here is honestly desesperate.

I'm pretty sure more than 50% off people holding a licence
never used their equipement or have sold all of it.

As long as commercial activities does'nt need our bands, we will
keep them, but if there is need for these (especially 23cm and
higher) I'm pretty sure we will loose them quickly. (and we wo'nt
have to argue about that, not using them anyway).

I do'nt think there is a way to reverse this evolution, technology
is just to difficult to developt and build someting ourself (just
look at the price off portable phones vs ham-radio transceiver).

Maybe we should go back to our roots, building simple CW transceiver,
but you wo'nt make a kid dream after that, like it was before.
(Hey, they all have portable phones, internet access etc nowadays).

So you may heard someday "is there anybody still earing me ?" on
the ham's band.

Looking after your through on this,
Have a nice day,

Thierry,

CQ 20m from KOREA.
This is HL1VEE.
I want to have a scheduled qso to practice english on ssb.
I have a first class licence which is the highest class in KOREA.
Since I got the license 20 years ago, I have not operated any ham station.
Therefore I forgot CW.
I got my call sign last year.
I do not have a lot of experiences to qso.

I am using 20 m band 4 element Yagi and TS-850SAT and Ten-Tec Hercules II
HF Linear which ouputs 500W.
I am not interested in getting an award,
but rag-chewing in English to practice.

I can use both radio and e-mail via internet simutaneously.
After both of you and me contact by internet at first to find the best
frequency on 20m band, we can start to talk.

Please let me know your suggestion via e-mail,
if you have a good idea on how to start qso by using both of them.
Please send me an e-mail message to start qso.
Please give me an exact frequency and a convenient time to connect.

I do not know whether or not CQ is allowed on the news group.
Let me know on it.

Thanks in advance!

In a recent article, ellsworth@bravo.otis.utc.com (Brian Ellsworth)
wrote

> Does improving your CW receive speed mean you are better equipped to
> enhance international good will? No.

I must beg to differ. My recent QSO with CO4BM in Nueva Gerona, Cuba
was a very friendly QSO. There hasn't been much friendliness between
The United States of America and Cuba in the last 30 years, and that
bad relationship is getting increasingly strained. With my ability to
send and receive CW, I was able to make a QSO that did slightly increase
international good will, at least by making me think of Cuba not as a
faceless newsbyte on TV but as a real country where there is a real,
living human being named Lopez that was once on the other end of my code key.

Could I have made the same QSO using SSB? Definitely not, at least not
with the antenna and rig that are in my budget. Perhaps by using clover or
one of the better packet modes, which I can't afford and which I doubt is
available in Cuba. Of course, we haven't even begin to discuss what
CO4BM can afford.

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Greetings from ARRL headquarters!

The services that the American Radio Relay League provides via the
internet include a World Wide Web page, an FTP file archive site,
an automated email information server (Info-Server), a number of email
mailing lists and direct email to most HQ staff. If you have any
questions about the following information, please send them to me at
mtracy@arrl.org.

Best regards - Michael Tracy, KC1SX, ARRL Technical Information Services.

* World Wide Web (URL http://www.arrl.org)

The ARRL's Web home page is now located at League Headquarters
in Newington, CT. This page, maintained by Dave Newkirk, WJ1Z,
features the following information links:

ARRL News Services (W1AW bulletins, etc.)
Lists of upcoming Amateur license exams
Email links to ARRL Officers, Directors and HQ staff
Listing of ARRL sponsored hamfests and conventions
Information on ARRL Membership benefits and how to join
Catalog of current ARRL Publications
...and more!

* FTP archive site (oak.oakland.edu)

The ARRL's FTP site is provided for by the generous folks at
Oakland University in Michigan and is maintained by Scott Ehrlich,
WY1Z, of the Boston Amateur Radio Club. This currently contains
a complete mirror of the files on our Email Information Server and
our telephone bulletin board.

To access this site, FTP to oak.oakland.edu. At the "login:" prompt,
type ANONYMOUS and at the password prompt, type your email address.
Change directory to pub/hamradio/arrl/infoserver and get the file
index.txt for a listing of what files are available (and in what
directories!)

* Email Information Server (info@arrl.org)

The Email Information Server (Info-Server, for short) is an automated
mail server that gives you access to many text files relating
to various facets of Amateur Radio. To obtain more detailed instructions
and a list of available files, send an email message to info@arrl.org
with any subject (it is not used) and the following text in the body

of your message:

HELP
INDEX
QUIT

Each file you request is then mailed to you automatically.

* Email Mailing Lists (listserv@netcom.com)

The following email lists are distributed by Netcom internet services
and are sponsored by Mike Ardai, N1IST, and the Boston Amateur Radio
Club. If you have any questions about these lists, please direct them
to Mike Ardai, N1IST at n1ist@netcom.com. For more information on the
Boston ARC, subscribe to barc-list.

arrl-exam-list: Amateur radio license examinations scheduled in the US
and in some foreign areas.
arrl-nediv-list: Bi-monthly bulletins from the ARRL NE Division director
arrl-ve-list: Announcements to VEs and VE teams.
barc-list: Information, discussion and announcements for the Boston
Amateur Radio Club and hams in Eastern Massachusetts.
barc-races: RACES in Massachusetts and emergency management
ema-arrl: ARRL Eastern Massachusetts section discussions
fieldorg-l: ARRL field organization discussions
fox-list: Fox hunting and Radio Direction Finding
ham-tech: Technical discussions and questions about Amateur Radio
ky1n-list: VE exams in New England
letter-list: Redistribution of the ARRL Letter
newsline-list: Redistribution of Amateur Radio Newsline
w1aw-list: ARRL bulletins, news, and information

These lists are automatically maintained by the Majordomo software. To
sign up or inquire about these lists, send mail to listserv@netcom.com
with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.

To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information about a list: info <listname>
For more information about Majordomo: help
To post (to the two-way lists), send your message to <listname>@netcom.com

* Headquarters Email for the American Radio Relay League

The complete list of HQ email addresses can be obtained on the
Internet via:

World Wide Web (http://www.acs.oakland.edu/barc/arrl.html) -
Click on the "Contact information" link.

FTP (oak.oakland.edu) - At the "login:" prompt, type ANONYMOUS and
at the password prompt, type your email address. Change directory
to pub/hamradio/arrl/infoserver and get the file hq-email.txt.

Email (info@arrl.org) - Send an email to info@arrl.org with any
subject (it is not used). Put SEND HQ-EMAIL.TXT on a line by itself
in your message. For a set of instructions on using the email server,
add the word HELP on another line by itself.

Best Regards, Michael Tracy, KC1SX, ARRL Technical Information Services

Hi Cecil,

And I'm going to borrow the argument that I use against the pro-coders:
None of that matters because it is 1995 and the world has changed. (In
code vs no-code, it means that the code has outlived it's usefulness as a
mandatory testing element; in Social Security vs no-Social Security, it
means that we're broke! We don't have the money anymore!)

(Not that I didn't appreciate the irony of the argument used. That's a
good one! :-)

Windtrax 6, a continuing series of flights for fun and education will be
launching on Saturday October 7, 1995 from Whiteland, Indiana at 7:30 am
or 12:30 UTC. The balloon will carry the following equipment:
ATV on 439.250 running 1.5 watts, showing two camera views plus a video Id'er
with the call of KT9V.
GPS on 446.000 running 1 watt running 1200 baud packet APRS software giving
altitude, latitude and longitude.
Cross band repeater. Input on 144.300 with outputs on 444.850 at 250mw
and on 52.525 using a recrystalled and tweaked baby monitor transmitter
running aproxmatley 80mw.
A hf net will be held on 3871 for launch and status information.
All amateur operators are invited to participate in this flight.
This flight is sponsored by the Midstates Amateur Radio Club.
Please pass on this announcement to clubs and nets thru the midwest.
9-30

>from Iraq or do other things that our government would not want to see
>happen.

Gee, since France *isn't* a member of NATO, and since France did and
does trade with countries we don't or didn't like, that's all rather
moot don't you think?

The real basis for the restriction is the Cold War idea that technology
is a weapon (which is true enough), and that exporting encryption
technology is arming our potential enemies with secure communications
we can't intercept and decrypt. The fallacy of this is that the rest
of the world already *has* encryption technologies we can't read. That
particular genie was out of the bottle long before DES and RSA. All the
world's militaries, and diplomatic corps, have access to secure encryption
techniques *now*. Since we already cannot read the other gentlemen's mail,
export restrictions on this technology are moot.

Citizens of France, and other nations, can *already* download
secure encryption techniques from sources outside the US (and
France). And commercial software vendors in some other countries
can already include encryption in their offerings to commercial
customers while US companies cannot offer such a feature to their
export customers. This has the effect of reducing the competitiveness
of US companies in the international market.

What really disturbs governments, including the US government,
is that encryption has expanded beyond the military and diplomatic
realms and into the province of ordinary citizens. Governments
become upset when they can't read their own citizens' mail or
financial records. That's why many believe that DES has a back

door which allows the government to easily break it, why the government is pushing a law to make future encryption technologies for the phone network include a backdoor for government eavesdropping, and why the government is so upset that many ordinary citizens have gotten their hands on PGP. It represents a lock that they can't smash with a jackbooted heel.

When ordinary citizens have a way to *enforce* privacy on their records and conversations, governments have less control over their citizens' lives, and that frightens and angers the would be tyrant. Governments prefer that people's rights remain only things on paper, empty promises easily broken, rather than for those rights to have a tangible enforceable reality outside of government control.

>[snip]

As long as we are the only radio service in the US allowed to build/modify transmitters, whose signals can extend worldwide, and whose signals could cause havoc on a worldwide scale (transoceanic air-to-ground freqs immediately come to mind), then yes, we need to keep our standards very very high.

We are amateurs in the sense that we don't receive any monetary gain from our pursuit.

Jeff NH6IL

20. Re: Hams in Wisconsin with Internet Address -

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-01 00:00:00 UTC
From: wb9lbt@aol.com
Message-ID: <44l4k5$4op@newsbf02.news.aol.com>
Source record: 237602

Brian,
I'm Bob DeRoche in Greendale, WI - outside of Milwaukee. My call is
WB9LBT. I have an internet address - actually several:
9618derocher@vms.csd.mu.edu
or robertd@ifebp.org
or wb9lbt@aol.com

If I can be of assistance, let me know. Bye the way, I have a Jesuit
priest friend who is currently visiting Australia - for about 3 months.

21. Hams in South Bay (Los Angeles)

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-01 00:00:00 UTC
From: care4k9@rain.org
Message-ID: <44l5rp$gfl@news.rain.org>
Source record: 237603

Hi, I've been really lagging in trying to study for my Ham license
and wondered if there are classes in the South Bay area to get me back on
track. I need a little push, angel, study buddy or something to keep me
going so I can get my license! Any information or help would be GREATLY
appreciated!

--
Take Care,
Christy
Redondo Beach, California (Los Angeles)
(care4k9@rain.org)

+ eaddy@nacec.org
+
+ EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS
+
+ After a large disaster strikes your community and your family, I am
+ sure you will agree that its a little late to start building a massive
+ rapid response, emergency communications system supported by thousands
+ of people within companies, organizations and serving as volunteers to
+ provide essential support services.
+
+ We are the North American Center For Emergency Communications Inc.
+ (NACEC), a federally-registered non-profit organization serving North
+ America since 1992. We have been developing a system that merges many
+ different technologies to create a unique, high-capacity,
+ rapidly-deployable solution to the problem of communications outages
+ and shortages that occur following a large disaster. Our volunteer

+ network in using the Internet as its communications backbone, is
+ itself using one of the many technologies employed in NACEC's overall
+ solution.
+
+ To help ensure the greatest possible effectiveness in as many
+ communities as possible throughout North America, we are developing a
+ very large volunteer network of community volunteers (Community
+ Ambassadors) who work with our staff and their local communities. If
+ you are community active and are interested in helping, we need your
+ help, NOW. Please, don't wait until disaster strikes, help us to be
+ prepared and be ready to assist your community.
+
+ The more communities that are represented by our volunteer network,
+ the more effective we can be in disaster preparedness, emergency
+ operations and in the area of emergency and military family message
+ handling and delivery.
+
+ As a NACEC volunteer (Community Ambassador) you will assist with the
+ movement of information that is vital to the continued success and
+ growth of this organization and the survivability of your family and
+ your community following a large disaster.
+
+ This project is growing rapidly, as we locate and add new dedicated
+ volunteers from as many communities as possible from across North
+ America. I hope you will join us in making this organization a
+ success.
+
+ To find out more about how you can get involved in this project and
+ use your Internet skills to help your community, please review the
+ information that is in our WWW Homepage area which can be found at:

+ http://www.winternet.com/~nacec/index.html

+ An electronic volunteer application form can also be found there as
+ well. Should you have any questions, please address them to my E-mail
+ address above.

-
- * VHF packet (AX.25 and TCP/IP)
- * HF SSB and RTTY
- * FM/repeaters
- * Clubs/activities
- * Public relations
- * Writing (for newsletters and ARRL publications)
-
- My job at as QST Features Editor at ARRL HQ includes (among other
- things) writing and editing general-interest feature articles for QST,
- and writing the FM column, Up Front in QST and Strays.
-
- I'm the "handling editor" (copy editor+) for other regular columns
- conducted by other contributors, including Packet Perspective by Stan
- Horzepa, WA1LOU; Public Service by Rick Palm, K1CE; Club Spectrum and

- Section News by Steve Ewald, WV1X; How's DX? by Bill Kennamer, K5FUV;
- Happenings by Jim Cain, K1TN; Contest Corral and Special Events by
- Warren Stankiewicz, NF1J; Hamfest Calendar and Coming Conventions by
- Gail Iannone; most of the contest rules announcements and results
- articles; and I compile the Annual Index in the December issue.
-
- I coordinate and often contribute to the New Books reviews and New
- Products listings scattered throughout the magazine, and often
- contribute to QST Product Reviews. I also wrote the "Modes" chapter in
- the 1995 ARRL Handbook and chapters in the ARRL Operating Manual, and
- I've contributed to several other publications, including W1FB's Help
- for New Hams (ARRL) and Ham Radio Horizons (CQ Communications).
-
- I started working at ARRL HQ as QST Copy Editor in December 1989.
-
- I'm 37 years old, I've been a ham since 1976 and I hold an Amateur
- Extra Class license. I'm a member of the ARRL, the ARRL A-1 Operator
- Club, Ten-Ten International Net (53313), and the Middlesex Amateur
- Radio Society/Connecticut Amateur Radio Emergency Service (MARS/CARES,
- an ARRL Special Service Club, in which I served two terms as president
- and a couple of years as newsletter editor). I'm also an ARRL Public
- Information Officer for the Connecticut Section. These days, most of
- my on-air time is limited to 2-meter and 440-MHz FM and 2-meter TCP/IP
- packet radio, although I crank up the HF rig when I can spare some
- time and try to join in VHF/UHF contests when I have the time and
- access to equipment. My favorite Amateur Radio activity is Field Day;
- the MARS/CARES club has a terrific time with that event every year.
-
- I have about 10 years' experience with personal computers, including
- MS-DOS, Windows and IBM OS/2. I was a full-time professional
- commercial broadcaster for 12 years.

! ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

AMATEUR RADIO NEWSLINE IS NOW ALSO BEING ARCHIVED, TOO:

! ftp://ftp.barc.org/pub/hamradio/docs/newsline/

MACINTOSH AMATEUR RADIO SOFTWARE ARCHIVE:

! ftp://ftp.barc.org/pub/hamradio/mac/

HAM RADIO AND MORE, THE RADIO SHOW CARRIED LIVE EVERY SUNDAY (6PM - 7PM EST)
! ON THE TALK AMERICA RADIO NETWORK, NOW HAS A WORLD-WIDE WEB HOME PAGE:

! http://www.barc.org/barc/ham-more/ham-more.html

! THE BOSTON AMATEUR RADIO CLUB ALSO HAS A WORLD-WIDE WEB HOME PAGE:

! http://www.barc.org/barc.html

DUE TO THE POPULARITY OF THE KY1N VE LISTING AND W1GSL'S HAMFEST LIST, I HAVE
INCORPORATED BOTH OF THESE LISTINGS INTO THE BOSTON AMATEUR RADIO CLUB'S WEB
PAGE:

! http://www.barc.org/barc/ne-happenings.html

! The American Radio Relay League (ARRL) World-Wide Web Home Page has
! now moved to ARRL HQ. See David Newkirk's entry for more information.

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a
copy of the page via E-mail; send a message to listserv@info.cern.ch

+
+ AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER
+
+ The American Radio Relay League is pleased to announce the startup of
+ ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL
+
+ http://www.arrl.org/
+
+ ARRLWeb will serve as an essential Internet resource for active hams,
+ carrying ARRL news, details on upcoming hamfests, conventions and
+ Amateur Radio examinations, the ARRL Publications catalog, information
+ of ARRL membership benefits and services, and more.
+
```

```
+ In inaugurating this new service, the League thanks Scott Ehrlich,
+ WY1Z, and the other Boston Amateur Radio Club volunteers who've
+ worked since December 1994 to keep ARRL up and coming on the Web via
+ the ARRL home page they installed and maintained at oak.oakland.edu.
+ Their volunteerism helped show us that upgrading our Internet
+ connection to a level that allowed on-campus Web service would be
+ essential to ARRL's mission of serving Amateur Radio.
+
+ Your comments, criticism and suggestions on how to make ARRLWeb bigger
+ and better are *essential* to its ongoing success, so please drop by
+ and say hello!

STATE FREQUENCY COORDINATOR, TEXAS VHF-FM SOCIETY

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10
years. I don't know it all, but through my contacts I can find someone
that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@kentrol.synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

JPS COMMUNICATIONS, INC.

For those interested, JPS Communications, makers of DSP noise filters and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses of DSP in amateur radio. If you know of some, I'd appreciate hearing about them. There are a lot of people experimenting with new modulation schemes, voice compression, noise reduction, DSP IF techniques, and lots of other interesting applications. I'm planning to add a page with links to this information, so keep an eye out for it, and if you have something to share, please drop me a line.

Lance Halle KC7FVX

Brian Hammill KD4BFJ

Brian Hammill, KD4BFJ | brianh@dante.exide.com
Software Engineer | Exide Electronics - Small Systems Group
Raleigh, NC | "Powering Your Network with Intelligent Solutions"

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham- Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

Steve Harding KA6ETB

For amateur radio related information, send a message to:
ham-server@grafex.sbay.org
and put "HELP" and/or "GET /HAMRADIO/INDEX.TXT" in the body.

HAM-server is now on a 486 with nearly 70 MB of data. Besides DOS,
there are some UNIX, Mac, and OS/2 files.

Most files have been taken from the various ftp-servers world-wide.
However, there are many programs that have been donated by HAM-server
users.

Submissions welcome. Send to incoming@grafex.sbay.org.

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package

on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

Richard Hieber DL8MFQ, AA8CP

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise:

* QRP work
* mobile operation
* computers (DOS, OS/2, Linux)
* Packet Radio
* wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free
environment for discussion of any subjects relating to low-power
amateur radio operation. Example topics: portable operation, equipment
design and construction, solar and battery power, QRPp, contesting,
kit building.

Jack G.F. Hill W4PPT

Jack, W4PPT/M (75M SSB 2-letter WAS #1657/#1789 -- both from the mobile! ;^)

Jack GF Hill |Voice: +1 615 459-2636| Ham Call: W4PPT

root@jackatak.ThePorch.com - "Plus ca change, plus c'est la meme chose"

MOBILE ANTENNA SYSTEMS AND INSTALLATION (PRIMARILY HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ.

The new mailing list addresses are now

* boatanchors@ThePorch.com
* rra-wg@ThePorch.com

Use these addresses for messages of general interest to the entire
group. Please don't use them to subscribe, change address, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe
boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly,
to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't
be resolved otherwise.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS FRIDAY NIGHT FIST FUNCTION

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

PACKET : WB3FFV @ WB3FFV.MD.USA.NA |

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line).
Through user support I hope to keep the latest and greatest ham
software on-line. The BBS also offers access to nearly all of the
Internet (USENET) NetNews groups, plus access to most Internet
services such as E-mail, FTP, TELNET, Gopher, WWW, Callsign Lookup,
Etc... Below is the information that is needed in order to access the
BBS via Telephone, Telnet, or FTP. Please pass it around to as many
ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET/FTP - telnet://bbs.abs.net/ (login: bbs)
ftp://ftp.abs.net/

WWW - http://www.abs.net/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

* KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
* KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
* KA9Q TCP/IP for UNIX based systems
* KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
* KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
* N2GTE Packet Message Switch [GTEPMS]
* WA7MBL BBS for the PC
* W0RLI BBS for the PC
* MSYS BBS for the PC running KISS TNC's
* AA4RE BBS for the PC (plus BETA versions)
* F6FBB BBS for the PC
* G8BPQ PC-Node (Version 4.08)
* Various BBS utilities and enhancements
* Several MORSE CODE Tutors
* TheNet software by NORD><LINK
* Modifications for many HAM Rigs and Scanners
* Digital Signal Processing software (DSP)
* DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of available archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic directory.

If you want to access the BBS via Telnet, all you have to do is access:

telnet://bbs.abs.net/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://ftp.abs.net/

and login as 'anonymous' (may not be necessary, depending on your FTP client).

AMPR.ORG IP COORDINATOR FOR MARYLAND SUBNET (44.060.XXX.XXX)

(see James Fay's entry instead for ampr.org IP coordination in Prince George's, St. Mary's, and Calvert Counties)

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

The URL is:

http://www.qrz.com/email.html

Register your E-mail address today!

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State Univeristy
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

myers@fc.hp.com

Antennas, Novice/Tech instruction, batteries, power supplies, RFI, equip. testing/troubleshooting, FAQs, homebrewing. Basic theory questions also welcome.

My particular interest is in antennas and transmission lines, but I'm also more than willing to answer whatever I can in general radio theory, propagation, analog and digital electronics, etc.. (I'm a display engineer in "real life", have done my share of digital design, and have taught communication electronics at the local community college. I'm also active in some display and television standards activities.)

Amateur Radio Elmers Resource Directory (as of 10/01/95)

------------------------------------------------------------------

- A -

------------------------------------------------------------------

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).
```

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

Chuck Adams K5FO

adams@sgi.com

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.winternet.com/~nacec/index.html

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and
search types.

In doing so, I'll have the ability to add data for many more
countries. That is, of course, if I have the data. In order to do this
I need help. I need to get in touch with all people that have access
to databases from countries other than the US. The more up-to-date
these databases are, the better. If you have access to a database and
would be willing to donate a copy to the callsign server for everyone
to use, please contact me. A lot of people would genuinely appreciate
it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

MAINTAINER OF LIST OF PERIODICALS OF INTEREST TO QRP ENTHUSIASTS, ELECTRONICS BOOKS OF INTEREST TO QRP ENTHUSIASTS, AND ANTENNA BOOKS OF INTEREST TO QRP ENTHUSIASTS

Available from the QRP-L WWW Page at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your guest login name (if you have one). If you want a permanent login, write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and

LAN Workplace.

I'm still clueless in the electrical/circuit department.

RELAYER OF AMATEUR RADIO NEWSLINE BULLETINS

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

- D -

Matthew A. (Matt) D Alessio KC6VIM

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

I am the US National Coordinator for RAIAR, Radio Amateurs International Awards Registry, we have over 78,000 registered members and just over 2,500 general members, plus lifers and charters also.

RAIAR only deals with the VHF/UHF spectrum for its awards, plus SWL on all bands.

I am ready to help any interested individual obtain his Novice or Tech ticket, as well as teach him the ins and outs of VHF Packet.

Our radio club holds classes for those inclined to advance to General and above.

Boston ARC ftp archives: ftp://ftp.barc.org/pub/hamradio/
Boston ARC Web page: http://www.barc.org/barc.html

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file
archives with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A VIRTUALLY COMPLETE ARCHIVE OF ALL ARRL BULLETINS SINCE 1992 IS AVAILABLE
AT:

ftp://ftp.barc.org/pub/hamradio/barc/w1aw-list/

A MIRROR OF ALL FILES AVAILABLE FROM THE ARRL INFO SERVER IS ALSO AVAILABLE:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserver/

THE ARRL INFOSERVER MIRROR HAS FCC PART 97 (U.S. AMATEUR RADIO SERVICE RULES
AND REGULATIONS) AT:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserver/rib/part97.txt

PROGRAMS MENTIONED IN QST ARE IN:

ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

AMATEUR RADIO NEWSLINE IS NOW ALSO BEING ARCHIVED, TOO:

ftp://ftp.barc.org/pub/hamradio/docs/newsline/

MACINTOSH AMATEUR RADIO SOFTWARE ARCHIVE:

ftp://ftp.barc.org/pub/hamradio/mac/

HAM RADIO AND MORE, THE RADIO SHOW CARRIED LIVE EVERY SUNDAY (6PM - 7PM EST)
ON THE TALK AMERICA RADIO NETWORK, NOW HAS A WORLD-WIDE WEB HOME PAGE:

http://www.barc.org/barc/ham-more/ham-more.html

THE BOSTON AMATEUR RADIO CLUB ALSO HAS A WORLD-WIDE WEB HOME PAGE:

http://www.barc.org/barc.html

DUE TO THE POPULARITY OF THE KY1N VE LISTING AND W1GSL'S HAMFEST LIST, I HAVE INCORPORATED BOTH OF THESE LISTINGS INTO THE BOSTON AMATEUR RADIO CLUB'S WEB PAGE:

http://www.barc.org/barc/ne-happenings.html

The American Radio Relay League (ARRL) World-Wide Web Home Page has now moved to ARRL HQ. See David Newkirk's entry for more information.

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a copy of the page via E-mail; send a message to listserv@info.cern.ch with the word

help

in the body for more information). Ask me for more details about this.

Posting-Frequency: posted on the 1st and 15th of each month
URL: http://www.gonix.com/pschleck/elmers/admin.html

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

------------------------------------------------------------

This administrivia file and the companion Amateur Radio Elmers
Resource Directory are intended for non-commercial distribution via
the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this
Directory, I've decided to adopt Uniform Resource Locator (URL) format
throughout. In addition to being a straightforward, human-readable,
format for specifying File Transfer Protocol (FTP) archives, Gopher
and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also
amenable to formatting as hypertext links in Hypertext Markup Language
(HTML). For example, users viewing this document at designated
World-Wide Web Servers (see "How may I obtain the latest copy of the
Elmers List?" below) will see all URL's converted to hypertext links
on their WWW client. Rather than fumbling with the various conventions
of FTP, Gopher, WWW, and Usenet News software, the document or
directory referenced by a hypertext link is but one mouse-click (or
key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide
further information about how to obtain and use WWW client software
such as Lynx and Mosaic (see his entry). While I'm happy to
incorporate the latest and most popular information-formatting
standards into the documents that I maintain, I really can't allow
myself to be dragged into the role of a WWW help-desk for all of the
Internet. Please understand this when I politely refer you to other
Elmers, easily-obtainable on-line documentation, or even local
expertise such as resident gurus, consultants, or help-desks at your
school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of
this somewhat radical new standard, especially to many users who can't
or won't use WWW. Those users should be assured that I wouldn't have
adopted a standard unless it was easily human-readable by those
accessing this document as straight ASCII. The URL format is easily
mapped into human FTP, Telnet, Gopher, and Usenet News reader
commands. For example:
```

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of

Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K

message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news.rec.radio.info
+ news:rec.answers
+ news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites:

+ http://www.gonix.com/pschleck/elmers/
+
http://www.smartpages.com/faqs/radio/ham-radio/elmers/top.html
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html

The advantage of reading the Elmers list at these sites via WWW
client software is that all URL's are converted to hypertext
links.

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

It focuses primarily on Contesting, DXing, and technical matters.

David Newkirk WJ1Z

webmaster@arrl.org

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and

Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Bob Nielsen W6SWE

nobody@nowhere.nodomain

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

Available from:

* http://www.smartpages.com/faqs/radio/ham-radio/faq/top.html
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/

* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

PHD CANDIDATE IN ADULT AND HIGHER EDUCATION

EDUCATIONAL ADVISOR, AMERICAN RADIO RELAY LEAGUE

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

I'm certainly willing to be an Elmer if there's a need. I hope I've learned a few things since 1966 when I first went on the air. :-) Here's a list of subjects I might be able to help with:

* Combining amateur radio and flying
* Antennas
* Civil Air Patrol

* General Operating Practices
* Older (Tube) Equipment
* Test Equipment and Measurements

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design

* Fairly broad interest in amateur radio (but not contests!)

* Antennas, Transmission lines,filters from fundamental theory to
practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing

* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available

locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

QUARTER CENTURY WIRELESS ASSOCIATION

(see also Jim Walsh)

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your

local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be

processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

Message-ID: <44m6u7$1434@usenetp1.news.prodigy.com>
Source record: 237617

I am in full agreement that there is room in ham radio for people to have an incredible spectrum of interests. I have been a ham for about a year and a half. I started as a no-code as have thousands of others. As my interests grew, I upgraded to tech plus and am working on general.

I have really appreciated the opportunities to help with local public service activities such as health and welfare nets for parades and road races. I will probably get to help a new school club get started this year and teach part of a novice class.

In the mean time I have built a couple of antennas and am thinking about qrp.

Yesterday I helped get our club repeater back on the air.

So is it people or technology? It is both. Some pursue 90% tech and 10 % people, others do the opposite or any mix inbetween. We have to be careful to respect the way other hams pursue this hobby. The discussions are great, but the hazing of no-codes as "not real hams" and similar internal squabbles (as well as other un-ham-like behavior) IMHO can be damaging. The public that puts up with us by allowing us to use the airwaves don't care about these internal differences, we are all the same to them. As long as we continue to serve the public, and expand the technology collectively, we can fulfill part 97 as a group. We don't all have to be EE's while running orphan and widow nets on CW.

: Now you need to explain why *Miss* Tastycakes is even mounting anything
: at all. Usually only male dogs do that.

You are putting "human" ideas for dogs (anthropomorphizing).
Mounting is a dominant gesture. If you watch dogs play, the dominate dog
will jump on the back and some do mount. Females also do this because it
is dominance NOT a sexual indentity crisis.

This situation can be corrected by the owner. Luckly the owner
doesn't have to mount their dog, but can use other means. Check your
local community for a good obedience instructor. They can help you with
the problem.

Maybe when...notice I didn't say "if", but rather "when" the outdated
Morse requirement is finally rescinded, it will no longer be an issue.

> But I guess that's not too likely, given your
>attitude. In my experience, there's more to communication than merely
>living nearby. I doubt very much that you've been a ham as many weeks
>as I have years.

Believe it or not, there's more to communication than just amateur radio.
I have 12 years' worth of commercial radio experience. How many do you
have?

> I hope that some day you'll have the grace to be embarrassed by your
>behaviour here on the net. This is in public, after all! More than
half of the active hams are active on CW.

What is your source for this? I am tired of hearing these numbers thrown
around without the facts to back them up. If you're referring to the
recent ARRL survey which said that 54% currently use code, please
remember that this survey included ONLY ARRL members! Considering that
over a third of all hams are no-code techs (a number that's growing quite
rapidly, by the way) and that the large majority of no-code techs are NOT
ARRL members, I doubt very seriously that you can substantiate your claim
that "more than half of the active hams are active on CW."

>Of those who bother to attain proficiency, then, I guess the vast
majority >continue to pursue it. There are forces at work here that you
do not >understand.

Please, do tell us about these mysterious "forces at work", will you?
I'm all ears...

Give your self about 9-12 months time and write a letter to the ARRL
to saying that you want a temporary license to operate there and they
will send you the right forms for this also instructions are in a June
95 or before QST.

Hello,

I have a friend with CAP and there is a new CAP law that in the future
they can use ONLY comercial radios.. For what reason they did this, I
have no idea.. But have NOT hear wether MARS will do the same.. So if
this law is not tabled, then only MARS personell can have ht's modified
at HRO & AES.. For a nonlicensed HAM that uses the ht out of band for
other than CAP - MARS)Saying this person IS licenses for MARS or CAP)
then his Ham License can be taken away and possible fines or
imprisement.. It is a FELONY for use FCC frequencies illegally.

If the CAP person is not a ham then he/she has no extra cost in buying
a comercial ht.. Have seen a Relm 16ch for about $389.00 just a little
more than a 2m ht.. But if that person IS a ham then another radio may
be in the works??

Yes, Kevin, you are just too much of a tech weenie, but without the years to support the half vast claims you make. Nothing is further from the truth than old ham radio is defunct. It is not and never will be since you fail to recognize the difference between social aspects of the hobby and the technical aspects that are possible. Take a few more years of observation before you tell the rest of us "old farts" where ham radio is!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 02/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 02 OCTOBER AND FORECAST FOR 03 OCTOBER - 05 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/10

GOES satellite data for 01 Oct
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
03 Oct 04 Oct 05 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 03 Oct: 73/10

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 01 Oct
Learmonth 11 2223 4322
Fredericksburg 15 02
Planetary 13 03

Observed Kp for 01 Oct: 1011 1112
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 Oct 15 Unsettled to active
04 Oct 15 Unsettled to active
05 Oct 12 Unsettled
COMMENT: IPS Geomagnetic Warning 24 was issued on 29 September and is
current for interval 2-5 October. Geomagnetic activity appears to be
milder than on previous roatation.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Oct normal normal fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Oct normal fair fair
04 Oct normal fair fair
05 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
02 Oct 8

Observed Australian Regional MUFs:
Darwin MUFs were depressed 30% during interval
04-09UT. Townsville MUFs were depressed 15% during
interval 04-07UT. Sydney MUFs were near predicted
monthly values.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
03 Oct 5 Near predicted monthly values
04 Oct 5 Near predicted monthly values
05 Oct 5 Near predicted monthly values
COMMENT: Due to apparent weakness in geomagnetic activity,
ionospheric depressions are now not expected.

Anybody got a site source for viewing or d'loading the CURRENT FCC
regulations, specifically parts 15 and 87? By the time you buy them
from GPO and get all the amendments, you are generally about a year
behind the real world. anon ftp or www would be the best.

62. 1995 CQP THIS Weekend!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-02 00:00:00 UTC
From: jholly@cup.hp.com
Message-ID: <44p0ue$ssu@hpax.cup.hp.com>
Source record: 237494

Are a California ham? Want to be the center of attention? Here's your chance to be the one others want instead of just another six. California QSO Party is this next weekend, October 7 and 8!!

Are you a county hunter looking for the elusive last couple in California? Good News!! All 58 counties will be on the air this weekend. Here's your chance to get the last few.

Want to enter a contest and get a certificate? CQP is the one! Everyone can be a winner. Send in your log with 100 contacts and a personalized certificate will show up in your mail box next spring. Send in your log for 100 contacts and $8 and you can get a vintage CQP T-shirt to show off at club meetings and ham fests. Lots of other prizes ... see the rules below.

Just finished putting up your version of the Eiffel tower with a shiny new Laser-Fire beam and want to see how well it works? This weekend is your chance?

Got your new amp finished? You know, the one where the finals have handles ... and the power company got the 3 phase power in last week. Well here is your chance to show off your new toy.

Got a new computer in the shack and want to try out computer logging? Here's you chance to try it out with freeware programs.

For those wishing to try computer logging there are three very good freeware programs availiable. They are authored by Northern California Contest Club members. Al, AD6E has written a CQP only program that has a nice free form input and handles all the duping chores in real time and finally prints the summary sheet. His program comes complete with basic source. Andy, AE6Y, has a dos and windows program that does not only CQP, but also the November SweepStakes and WPX! Of course Andy's program also handles the duping chores and prints the summary sheet at a touch of a key. Here's your chance to try a program and hone your skills for two other contests at the same time! Both are very nice programs and have had several years of real use by a number of satisfied users!

You can pick up the freeware programs at the maspar ftp site (maspar.maspar.com or 192.84.231.1). Al's program is in /pub/k2mm/cqp/pgm-ad6e/cqp94.zip, and Andy's program is in /pub/k2mm/cqp/pgm-ae6y/cqp94dos.zip or cqp94win.zip. I understand Andy's program can also be downloaded from compuserve in the ham forum library.

See you on the bands for CQP!

73, Jim, WA6SDM
jholly@cup.hp.com

##

1995 California QSO Party (CQP)
Sponsored by the Northern California Contest Club

Begins: 1995 October 7, 1600 UTC Ends: 1995 October 8, 2200 UTC

OBJECT:
Stations outside of California work as many California stations in as many CA counties as possible. Stations in California work anyone.

EXCHANGE:
California stations send QSO number and county. Stations outside of California send QSO number and state, province, or country.

QSO POINTS:
Each complete non-duplicate Phone contact is worth 2 points. Each complete non-duplicate CW contact is worth 3 points. No partial contact credit. Duplicate contacts must be clearly identified in log.

MULTIPLIERS:
California stations count states (50) and Canadian provinces (VO/VE1-7 and VY1/VE8) for a possible total of 58. All others use California counties for a maximum of 58. CA stations on a county line may be claimed as a multiplier for any or all of the counties they give in their exchange. Number each multiplier as worked.

SCORE:
The total score is the total number of QSO points multiplied by the total number of multipliers (58 Maximum).

FREQUENCIES:
160, 80, 40, 20, 15, 10, 6, and 2 meters. WARC band contacts do not count. Suggest CW on 1805 and 40 kHz up from band edge. Phone on 1850, 3850, 7230, 14250, 21300, and 28450 kHz. Novices 10 kHz up from band edge and 28450. Try CW on the half hour. Try 160 meters at 0500 UTC, 80/75 meters at 0300 and 0700 UTC. Try 147.54 MHz at 2000, 0000, and 0400 UTC.

CLASS ENTRY:
Single-Operator, Multi-Single, Multi-Multi, California County Expedition, Mobile, and Novice/Tech. Single-Operator entries limited to 24 hours maximum; off times must be clearly marked in the log and be a minimum of 15 minutes. Multi-Operator entries may operate the full 30 hours. Multi-Single entries must work only one band/mode for at least 10 minutes before changing band or mode. Stations may be worked once on CW and once on Phone per band. Single-Operator and Multi-Single entries are allowed only one transmitted signal. All CW contacts must be made outside the Phone sub-bands except for 160 meters. MCW is not permitted. All contacts must be simplex. California stations that change counties are considered to be a new station and may be contacted

again for point and multiplier credit. California stations operating on a county line may be counted only as one QSO.

ENTRIES:
Entries must be submitted no later than 1995 November 15. Entries of 200 or more QSOs must include duplicate check lists.

Logs may be submitted via postal mail to: NCCC, c/o Ken Anderson, K6PU, Box 853, Pine Grove, CA 95665. Entries may be submitted in CT Version 8 or 9 format with .BIN, .SUM, and .ALL files on 5-1/4 or 3-1/2 inch diskettes (no 2.88-MB diskettes). Label each diskette with call, entry category, and county/state/province/country. Please include a hard-copy summary sheet. Logs may also be submitted electronically by e-mail in ASCII format to cqp-1995@kb.org.

A one-dollar donation to help defray costs of printing and postage is encouraged. For a CQP paperwork package containing log and summary sheets, county abbreviations, and contest records, send a business size SASE to the above address.

AWARDS:
Entries with 100 or more QSO's qualify for the special CQP T-shirt; please include your size (L/XL) and $8 if you qualify and would like this special award.

Certificates -- To top Single-Op entry in each CA county, state, province, country, and to stations with 100 or more QSOs.

Trophies -- To top three non CA Single-Op entries, top three CA Single Op, top CA Multi-Single, top CA Multi-Multi, top Single-Op and Multi-Op CA County expeditions, and to the Mobile (multi-county) Single-Op and Multi-Op with the most QSOs.

Special CQP Wine Award -- The top 20 CA and top 20 non-CA Single-Op operators will receive a personalized bottle of NCCC Private Reserve California Wine. Winners under the age of 21 will receive a non-alcoholic personalized award.

Special Awards -- To the CA and non-CA Single-Ops with the most CW QSOs, with the most Phone QSOs; to the top CA and non-CA Single-Op low power entries (200 watts or less output); to the top CA and non-CA Single-Op Novice/Technician entries; to the top scorer outside of the USA and Canada; and to the top club in California. (5 entries minimum. NCCC, SCCC, NCDXC, and SCDXC are ineligible.)

published every week and is made available for unlimited free distribution.

* JOINT ESA/CNES PRESS RELEASE *
================================
Revised Ariane-5 launch timetable

Tests on the Ariane-5 launcher's cryogenic main stage have been under way
in Kourou for a year and were to have ended in the third quarter of 1995
with the subassembly's qualification. Many positive results were obtained
over the summer, but it was not possible to achieve some of the objectives
set for that period and a number of malfunctions disrupted the tests,
mainly as a result of problems encountered with operation of the ground
facilities. In addition, a leak in the oxygen feed line in the upper part
of the stage and a hydrogen leak at thrustframe level made it necessary to
improve the leak-tightness devices in a number of circuits. Lastly, an
incident on 01-September affecting the actuator system in the Vulcain
cryogenic engine led the board set up to analyze the problem to conclude
that the fault lay in the high-pressure oil distribution system, which
was subject to a water-hammer effect. Measures were immediately taken to
reinforce the circuit and repair work on the Vulcain engine was completed.

An overall verification test without a firing will be carried out early in
October to validate the changes made to the stage. It will also provide an
opportunity to check that the test systems are operating properly.

A detailed review of the time schedule has been carried out to take account
of the qualification objectives that have already been met and those that
remain for the launcher as a whole (systems, stages, subassemblies and

ground facilities).

All this work means that the start of the 501 campaign is now planned for early February 1996 with a view to the 501 flight taking place in late April and the 502 flight in September.

The European Space Agency has delegated the management of its Ariane-5 programme to CNES, the French space agency.

[Info via Peter Guelzow, DB2OS, of AMSAT-DL]

* SABLE ISLAND DXPEDITION *
==========
Wayne, VE1CBK; Ken VE1RU; Gary, VE1RGB and Don, VE1AOE will be active as CY0TP from Sable Island October 1 - 10, 1995, weather permitting. Sable Island is located at 60 degrees 2 minutes WEST Long., 43 degrees 56 minutes NORTH Lat with a Maidenhead Locator Square of FN93xw.

The equipment is already on Sable Island and the four operators will be departing Halifax, Nova Scotia by air at 13:00 UTC 30 Sept 1995. Don, VE1AOE will be the principle Satellite Operator and will be active on AO-10 and AO-13 along with most of the LEO analog satellites (including Mode K on RS-12/13.) Operation on the RS (and LEO) series of satellites will probably appear first followed by AO-10 and AO-13 later. Don expects to be very active on the satellites throughout the whole DXpedition period.

All 6-meter, VHF, UHF, satellite, and EME QSLs go to:

* AMSAT-NA AT SHORE AREA HAMFEST '95 *
=====================================
The seventh annual Shore Area Hamfest will be held from 8:00 AM until
2:00 PM on Sunday 08-Oct-95 at Brookdale Community College in Lincroft,
New Jersey. Brookdale Community College is located in Monmouth County
on Newman Springs Road, about two miles west of Garden State Parkway
exit 109.

This year's Hamfest promises to be the BEST EVER and will feature an ARRL
NJ State Convention, technical seminars, computer and electronics vendors,
door prizes, VE testing sessions, and offer breakfast and lunch in the
College's cafeteria. A representive from AMSAT-NA will also be in
attendance to demonstrate the latest in satellite tracking software,
answer questions, and display a scale model of the Phase III-D satellite.

A World Wide Web page has been established for additional information on
the Shore Area Hamfest. Feel free to visit the page at the following URL:

http://www.njin.net/~magliaco/hamfest.html

I hope to see YOU at the Shore Area Hamfest '95!

Amateur Radio Newsline Monthly Information Notice
================================================

Last Revised: 09/16/95 |

Amateur Radio Newsline is a weekly audio service produced by Newsline,
a service of the Westlink Radio Network. Editorial comment, news
items and all other business should be directed to Bill Pasternak,
WA6ITF, Newsline's Producer and Editor-In-Chief.

E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com
Phone/Fax - +1 805 296-7180
Fax senders should wait for voice prompt, then press start.

The transcribed version is produced by Dale Cary, WD0AKO from
materials provided by Newsline. and is jointly distributed to online
services and bulletin board networks by Steve Coletti and Dale Cary.

All others are asked to not post Newsline to any BBS or network
without the permission of Steve Coletti. There have been distribution
problems with many of these networks recently and posting Newsline to
an echoed conference because you haven't seen it there doesn't mean it
hasn't already been seen elsewhere. Reposting causes wasted bandwidth
and additional telephone charges to be incoured by the sysops of these
volunteer networks.

The copyright owner of The Amateur Radio Newsline is Newsline.
Permission to reuse all or part of either this written, or the audio
form requires that the item be taken in it's entirety, not be subject
to any further editing or commentary, and that full credit is given to
Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio
version in it's entirety over nets or repeaters. The text version may
be used for packet distribution as long as it is sent in its entirety
and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice or
digital forms of Amateur Radio, it is recommended that the closed
circut advisory be deleted. Audio, Computer, and Packet
retransmissions must be made without the editing or deleting of any
other part of the Newsline content. Unauthorized additional
commentary to the original message is also prohibited. To do so is a
violation of copyright and subjects the initiator to legal action by
Newsline.
```

Newsline may also be excerpted for code practice transmissions, and
may be used as a reference source in bulletin board discussions under
acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of
Newsline.

>happen.

France has been out of NATO for over 20 years. While they conduct
joint exercises with NATO, under DeGaulle they refused to place
French troops under NATO command. All NATO troops were thrown out
of France during that period.

The French have generally been unwilling to do anything in common
with others unless they have been in charge. I doubt seriously
whether French concerns had anything to do with restrictions. Remember
that British and US Naval codes were "stolen" through a French
computer system.

The security community in the USA just plain doesn't want
encryption technology to be exported from the US. This
restriction of public key encryption schemes has been in the
works for a long time and no other nation is responsible for
it.

What do you gain by putting it on 6 meters? Why not just use it
on 49 MHz?

Can't speak for others, but Georgia beat Louisiana to it two years ago.
Governor Miller made Amateur Tags "just another vanity plate" with a $25
manufacturing fee, a $25 vanity fee, a $20 annual tag fee, plus ad valorem
taxes. Our GA Section leaders got involved and effective this year, the
Amateur Tag has no manufacturing fee, no annual fee, and no tag fee.
Registrant pays only ad valorem taxes on the vehicle so tagged.

Sadly, ad valorem taxes are *too* high regardless.

Whoever it might be, tell em they need to jump on the fact that Louisiana is heading towards being the FIRST state (whoa, first in something! Cant be edjucashun!) in the US to *RECIND* a special Ham Radio License plate, making them the same price as all vanity plates, around $25 a *year* plus registration.

Fix that and I'll think about it.

Gerry, France did sign the North Atlantic Treaty in 1949, but when they expelled NATO forces from their territory, and withdrew their forces from NATO command in 1966, necessitating the withdrawal of SHAPE from Paris to Chasteau, Belgium, they de facto withdrew from NATO even if they maintain a de jure presence on the North Atlantic Council. It doesn't really matter if they still talk the talk since they refuse to walk the walk. Or put another way, they may claim to be a duck, but they don't quack like a duck, or waddle like a duck, instead they crawl like a snail behind the protection of their betters.

Its true that SACEUR has traditionally been a US general, but *his* boss, the North Atlantic Council's Secretary General, was a German last time I checked. SACEUR can't commit NATO forces without orders from the Council (though since he wears two hats, he can commit US forces in Europe under orders from the US President without Council authority, just as his counterparts in the British and German force structures can commit *their* troops on orders of their respective governments). The SHAPE staff is so integrated, however, that there would be serious practical difficulties with any major unilateral actions by individual national force components.

The latter is one of the strengths of NATO, and a major reason why France can't be considered a player since they've isolated themselves from the command structure.

What "commercial" service does this? Automatic CW IDers on private
land mobile systems are required to use 40% (+/- 10%) of the maximum
permissable modulation/deviation, maintain a speed of 20 to 25 wpm,
and use tone of 400 Hz (min) to 2000 Hz (max).

Hello amateurs,

I run APRS software. I tried to track the N9WST balloon flight
of 9/30. When I went to save the run in the backup file
at the end of the day, I goofed up and did not save the history
track so I cannot replay the run. Does anyone have this track?
It would be an ASCII file so it could be e-mailed easily.

Thanks.

A couple of years ago I went out on patrol with a State Trooper friend of mine. After each stop with radar, he pulled out a tuning fork, struck it against his steering wheel and placed it in front of the radar gun, and activated the gun. When I asked him what he was doing, he said that a law (state? fed?) required him to check the calibration of his radar gun after every stop. Does anyone know if this is a law in every state? If I get a ticket and the cop claims that I was speeding more than I actually was, I plan on asking for the calibration records for his radar gun.

A happy story: My dad dispatches for a trucking company. Each truck uses a Cadec computer module that records speed, stops, etc. One of his truckers was ticketed by a cop in a small town for going 65 in a 55 mph zone. He wasn't speeding and he got my dad to download the module and print out the information for him to take to court. Any time the truck would exceed 55, it would be recorded by the module. He took the printout to court and showed the judge that he wasn't speeding like the cop claimed. The judge threw the ticket out.

Huh?? I don't follow your logic here. Wasn't ham radio around long before the advent of the ARRL? So how can they be "the only reason (I am) a ham today?"

And how can I owe them "at least a year's worth?" As most of the vociferous pro-coders on here regularly point out, I've only been licensed for less than 4 weeks.

>They must charge someone...

Like a lot of states, Georgia does not issue a new "plate" each year -- they do that every five years. In the interim, they issue decals. Decals with the standard tag fee of $20. I did not know this when I got my AR Tag. The county tax office *refunded* my $20 tag fee and included a note explaining the law was written to exclude such a fee on the AR tag, just as they do for National Guard tags.

So I think the answer is "they overcharge everyone." But if it makes you feel better, Georgia is, as I indicated, an ad valorem tax state. The taxes on this particular vehicle were in excess of $400. Great deal, huh?

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio Software List
Terry Dawson, VK2KTJ, terryd@extro.ucc.su.oz.au
v1.8, 9 July 1995

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field. This document also
provides some detailed information on how to configure and install
some of the more important pieces of software.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but Matt Welsh
suggested that there was no reason why it shouldn't be distributed
with the Linux Documentation Project documents, so it has been renamed
the HAM-HOWTO and will be made available with the rest of the Linux
Documentation. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added Brian Lantz's TNOS.
Added Philip VanBaren's audio spectrum analyser.
```

Added Emarit Ranu's FT-890 controller program.

Corrections:
Updated Packet Cluster information.
Updated AX.25 kernel software.
Updated AX.25 utilites information.
Updated howto configure PI card.
Updated rspf daemon information.

2. Where to obtain new versions of this document.

This list will be periodically posted to the comp.os.linux.announce newsgroup, and to the HAMS list on niksula.hut.fi.

It is also available from the following World Wide Web sites:

The Linux Documentation Project runs a Web Server and this list appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ <dennis@nanovx.atl.ga.us> makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW <jgotts@engin.umich.edu> makes it available at: www.engin.umich.edu <http://www.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd <dantodd@fusilli.ucdavis.edu> makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF <alan@dap.CSIRO.AU> makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application
viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/microsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the Moon are also provided. Future releases will provide more options. SatTrack requires about 5 MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://ssl.berkeley.edu/isi_www/sattrack.html>

Compiling the software under Linux is quite straightforward. Manfred has designed the Makefile to compile the software directly under your home directory, this is easy to change.

The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack.V3.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack.V3.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack.V3.1.tar.Z> or
the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used
without special permission for non-profit, non-commercial use.
For commercial applications a license from the author is
required.

Contributed by:
Manfred Bester, DL5KR

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, drranu@holly.ColoState.EDU, KG0CQ.

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.
Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt
equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com
port to use. Once started the program is menu driven. Future
versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

o You may not charge ANYONE for the program itself.

o You may not distribute modified versions of the program.

o If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, drranu@holly.ColoState.EDU

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. Kernel Based AX.25 networking.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk and Jonathon Naylor, G4KLX, jsn@cs.nott.ac.uk

Description
Software that allows the Linux Kernel to perform AX.25 networking.

Status
ALPHA. Still under development. In a working state.

System requirements
Linux kernel 1.3.0 or later.

Detail
Alan's software provides the programmer with a berkeley socket based interface to the AX.25 protocol. AX.25 sockets can opened for either connected, or connectionless modes of operation. Support to allow tcp/ip over AX.25 is provided. The user applications have been written by Jonathon Naylor G4KLX. Jonathon has recently added NetRom support and provided fixes and other enhancements to the code. The software comes in two parts, a kernel patch, and the user programs. The user programs included are:

axassociate
to associate a particular AX.25 callsign with a userid on your system.

axattach
to convert a serial device into a KISS device.

axl
an AX.25 listener designed to start a PMS when it receives an incoming connection. The PMS is still very new.

axsetcall
to change the callsign of a port.

beacon
generated beacon messages every 30 minutes.

call
A linemode AX.25 connection program. Call allows you to make connections to other AX.25 nodes. It provides file transmit and receive capabilities, and newer versions allow YAPP binary file transfers.

listen
a packet trace tool for radio links.

mheard
a program to display callsign heard on radio ports.

netromd
a daemon program to generate netrom routing broadcasts.

noderest
a program to restore netrom routing information from a file.

nodesave
a program to save netrom routing informtion to a file.

nrparms
a program to configure a netrom interface.

rip98d
an implementation of the rip98 routing protocol.

Where and How to obtain it.
There are a number of different versions of the software. You must choose the one that suits your version of Linux kernel. Software for kernel versions older than 1.3.* is available from:
sunacm.swan.ac.uk
<ftp://sunacm.swan.ac.uk/pub/misc/Linux/Radio/>

More detail on where and how to obtain the software is provided in the AX.25 section of the `Installation, Configuration, Hints and Tricks' chapter below.

Licensing/Copyright
Most of the software is covered by the GNU Public License, some of the software is Copyright by the Regents of University California Berkeley.

5.2. JNOS

Author
Brandon Allbery, KF8NH, bsa@kf8nh.wariat.org

Description
Brandon ported JNOS to Linux. His port is currently of the 1.09 (aka 1.08df) release of JNOS. Future versions will probably be based on Doug Crompton's evolution of 1.08df. Brandon suggests that JNOS for Linux is primarily of interest to people with existing DOS-based NOS configurations (especially server/switch configurations) who wish to switch to Linux or to escape the 640K barrier.

Status
The current version is ALPHA.4. Brandon is still tracking down bugs, as well as evolving new features.

System Requirements.
Any version of Linux along with ncurses 1.8.1 or 1.8.5 (the latter is preferred). Optionally you will require Linux networking (at least loopback) and slattach (kernels pre-1.1.13 or post-1.1.20 required for this).

Detail
If you include the Linux networking code in addition to JNOS, you can link the two by a slip link running over a pty, so that Linux can provide services to your radio users. In this way you can easily add servers without having to build them into JNOS itself. Brandon has supplied the following list of known bugs:

o some servers seem to be causing unexplained exits.

o PPP is reported not to work in ALPHA.4, although it worked in ALPHA.3.

o BBS forwarding when convers is compiled in but not configured causes core dumps.

o the finger server is getting bad filenames.

o the bbs W command is case-munging filenames.

Where and How to obtain it.
You can obtain JNOS for Linux ALPHA.4 at: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/j109lxA4.tgz> ncurses is available on most Linux ftp sites.

Licensing/Copyright
Brandon's modifications to JNOS are public domain. Most of the pre-existing NOS code is copyrighted and restricted to non-commercial use by the various contributors from Phil Karn on.

Contributed by:
Brandon Allbery, KF8NH

5.3. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is avialable for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 1.14 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/current/linux/>.

Where and how to obtain it
The current version of TNOS is always available from: www.lantz.com <http://www.lantz.com/tnos/current/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/tnos/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.4. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set

to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.
Contributed by:
Bob Proulx, kf0uw, rwp@fc.hp.com

5.5. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.6. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in March 1995.

System Requirements
Linux Kernel version 1.1.50 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

o It is fully compatible with the internal PCxx protocol and from a users' point of view. It allows multitasking and different priorities for different things.

o The software detects looping DX spots without generating endless messages. clx filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". clx knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by clx.

o An interface to call your external programs (even dialog programs).

o clx uses modern programming concepts like shared memory for common data, lex & yacc to implement command language, shared libraries to keep binaries small (this is still on our wish list), remote procedure calls for inter process communication. It is strictly modularized with its own dedicated process for every major task.

o Comprises the following modules:

con_ctl
interfaces AX.25 kernel code and provides a socket for local users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).
clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

o The following is the only application program which can be run
on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

o A console monitor to watch ongoing activities

o Speed optimization

o An internal clx protocol

o An additional command shell for experienced users

Where and How to obtain it:
You can obtain clx from ftp.uni-erlangen.de <ftp://ftp.uni-erlangen.de/pub/public/pc-freeware/hamradio/packet/packclus/clx> or ftp.ucsd.edu <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

o 00index

o clx_105.tgz

o install.clx

o README_1.06

o upd_106.tgz

Licensing/Copyright
clx is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to <clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.7. Single floppy disk AX.25 router.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A single floppy disk version of linux with enough software to allow a PC to act as an AX.25/IP router.

Status
Development, not yet released.

System requirements.
As for any Linux system a 386SX class PC or better.

Detail
No detail yet.

Where and How to obtain it.
Not yet available.

Licensing/Copyright
Unknown/Undecided.

5.8. TNT.

Author
Mark Wahl, DL4YBG, DL4YBG @ DB0BLO.#.DEU.EU, wahlm@zelator.de

Description
A Hostmode terminal program for TNC's that support the WA8DED hostmode protocol.

Status
Version 0.8 is reportedly stable.

System requirements
TNC supporting WA8DED hostmode protocol, serial line.

Detail
TNT is a full featured hostmode terminal program. Compiling it on Linux is as difficult as untarring the source and typing `make'. It provides both a `dumb' terminal and X11 version. It comes with some comprehensive documentation which describes its features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual screens that you can switch between. Each session window provides split screen (seperate transmit and receive text) operation with a status line. Commands can be entered in either a command session, or in any terminal session using a command key. Each of the virtual screens can be larger than the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an

ethernet and you want other terminal on the net to have use
of your radio.

Where and How to obtain it.
The software is available by anonymous ftp from: ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc08.tgz>. This site
is mirrored at a number of places so you will probably find it
at other places as well.

Licensing/Copyright
GNU Public License. Freely redistributable, no warranty.

Contributed by:
Steffen Weinreich, DL5ZBG.

5.9. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA
(port to BSD), then Ron Atkinson N8FOW and John Paul Morrison
(port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an
IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have
been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet
radio you have probably been connected by an encapsulation
gateway of some descpription. Most run KA9Q's NOS and DOS, but
others run Unix and this daemon. It allows you to encapsulate IP
within IP, so that you can 'tunnel' IP connections over the
Internet. The software allows you to connect a KISS TNC to your
linux machine and to have all datagrams received on it carried
across the Internet to a similar gateway. Bdale has installation
instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com
<ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp
site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code

and like it you might send him a QSL card or a postcard.
Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

5.10. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an
AXIP encapsul ating gateway.

Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It
allows you to encapsulate AX.25 frames in IP to carry them
across the Internet. This is useful for linking AX.25 networks
in remote areas. Ron has supplied a Makefile for linux, and with
it the software compiled without errors on my system running a
recent version kernel. Ron has also written some README files
which give you the detail necessary to compile the system and
the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps
directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is
not removed.

Contributed by:
Ron Atkinson, N8FOW

5.11. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, <dc6iq@insu1.etec.uni-karlsruhe.de>

Description
This is a version of the convers server that allows multiple
users to simultaneously chat with each other in a round-table

style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.
System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers-941122.tar.gz>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.12. AX.25 digipeater for Linux

Name
axdigi

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Allows Linux to digipeat across different ax.25 ports

Status
Beta release

System requirements
Requires Alan Cox AX.25 kernel support

Detail.
Allows frames to come in one port and out another using normal ax.25 digipeater methods. Changes the digipeater callsign to the correct one for the correct return port.

Where and How to obtain it.
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/axdigi.tgz>
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/axdigi.tgz>

Licensing/Copyright etc.
GNU GPL

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.13. Gracilis PacketTwin kernel driver

Name
Gracilis PacketTwin kernel driver

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Device driver for Gracilis PackeTwin cards.

Status
Alpha test - needs some more work before it is properly
released.

System requirements.
Gracilis PackeTwin card, Alan Cox's AX.25 kernel software.

Detail.
Provides kernel based driver support for the Gracilis PackeTwin
card using the kernel AX.25 code.

Where and How to obtain it.
Currently available only by email from the author.

Licensing/Copyright etc.
Restricted use by alpha testers only, general GPL release is
some months off.

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.14. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha test - running. Current version is 0.03

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It hopefully addresses some of the quirks of RSPF v2.1, the version in NOS. It will also allow remote/local queries via a tcp session.

Where and How to obtain it.
Alpha versions are available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/> or from the author.

Licensing/Copyright
Will be covered by the GPL when formally released.

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.15. Z8530 SCC driver.

Name
generic Z8530 SCC device driver.

Author
Joerg Reuter, <DL1BKE@melaten.ihf.rwth-aachen.de>

Description
A device driver to allow you to use a range of 8530 based SCC cards under Linux.

Status
stable

System requirements.
a modern Linux kernel

Detail
The Zilog Z8530 SCC provides Synchronous/Asynchronous, HDLC, NRZI encoding and other capabilities. There are a number of peripheral cards that use the Z850 as the basis of their design. The driver is generic enough to be pushed into service for just about any sort of 8530 card. The README file that comes with the package provides detail on installation and configuration.

Where and How to obtain it:
The driver can be obtained from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/z8530drv-1.8.dl1bke.tar.gz> for kernel versions older than 1.3.*. Kernel version 1.3.* supports the driver in the standard distribution.

Licensing/Copyright
Gnu Public License.

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat, and allows you to play morse at a range of speeds and frequencies through the PC internal speaker. You can specify the text to be played either from the command line, from a file, or the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.2. morse (aka superiormorse)

Author
Joe Dellinger, Hawaii Institute of Geophysics, University of Hawaii at Manoa, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts, jgotts@engin.umich.edu

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for

amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.2. Printed Circuit Board design tool.

Author
Thomas Nau, <Thomas.Nau@rz.uni-ulm.de>

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.3, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile
and install the software. I compiled it without error under
X11R6. It comes with package layouts for a range of popular
components and the example layout nicely demonstrates the
capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.3.tar.gz>
or from: ftp.medizin.uni-ulm.de <ftp://ftp.medizin.uni-
ulm.de/pub/pcb-1.3/pcb-1.3.tar.gz>

Licensing/Copyright
GNU Public License

11.3. Chipmunk circuit design and simulation tool

Author
Dave Gillespie <daveg@synaptics.com> and John Lazzaro
<lazzaro@cs.berkeley.edu>

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256
color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits>or ifi.uio.no
<ftp://ifi.uio.no/pub/>.

Licensing/Copyright
Modified GNU Public License, Caltch specifically disclaimed from
liability.

11.4. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.5. Spice vers. 3f4

Author
University of California, Berkeley, ported by Jeff@EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer

modelled environment to see how they will behave without having to touch a soldering iron, or solder. A readme file comes with the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely redistributable provided you are not unfriendly to the U.S.

11.6. svgafft - Spectrum analyser

Author
Andrew Veliath, drewvel@ayrton.eideti.com

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha software, but usable.

System requirements
Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks.

Where and How to obtain it:
Look for svgafft-0.2.tar.gz on sunsite.unc.edu

Licensing/Copyright
Unknown, check any README supplied.

11.7. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: umich.edu
<http://bul.eecs.umich.edu/~phillipv/signal>, sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.
Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens, bruce@pixar.com

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Lauritz Johnson, tuna@cag.lcs.mit.edu, modified by Dimitris
Evmorfopoulos, devmorfo@cs.mtu.edu.

Description
A rotating earth for X-windows root window. It has real life
shading, and options for geostatic view, and non geostatic view.
A prettier and more modern version of sunclock but requires a
bit more processing power.

Status
released, stable.

System requirements.
X-Windows.

Detail
xearth is much like sunclock except that it draws a view of the
earth onto your root map in blue and green, as the earth would
be viewed from space. You have a number of options in
determining the behaviour of the view. You can either have it so
that the same part of the earth is displayed, and the sun
rotates, so you'll have varying light and shadow on the display,
or you can have it shown as if you were travelling with the sun,
so the whole of the globe is visible, and the earth rotates.
You can specify the latitude/longtitude that will be the centre
of the display. xearth is also capable of producing gif and ppm
```

graphics output, so you can generate custom graphics of the globe. When run as your root map, you can adjust the interval of time between updates. On my 486sx25 you notice a small degradation in performance when it is recalculating, but it's not annoying.

Where and How to obtain it.
A precompiled xearth binary is available from: sunsite.unc.edu, or the source can be obtained from just about any X11/contrib directory. Try export.lcs.mit.edu if you can't find it elsewhere.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Alan Cox, GW4PTS.

14. Installation, Configuration, Hints and Tricks.

This section provides some detail on how to actually install and use some of the listed software. It will also detail some solutions to some tricky problems that you might encounter with the software.

14.1. AX.25 - Packet Radio protocol kernel software.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as tcp/ip and netrom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

Alan Cox has developed some kernel based AX.25 software support for Linux and these are available in ALPHA form for you to try. Alan's code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card and the Z8530 SCC driver.

The User programs contain a P.M.S. (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol.

Be sure to read /usr/local/ax25/README as it contains more complete information regarding this software.

14.1.1. Where to obtain the AX.25 software.

The AX.25 software is comprised of two component, the kernel source and the utility programs. As of the version 1.3.* release of Linux kernel source the AX.25, Netrom, Z8530 SCC and PI card drivers are all

included as a standard. I strongly recommend you obtain and use the version 1.3.* kernel source. Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter.

You can obtain the latest kernel source from:

ftp.funet.fi

/pub/OS/Linux/PEOPLE/Linus/v1.3/

You will also need the utility programs. The latest version of those can be found at:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-030.tar.gz
.../ax25-utils-030-patch1.gz

14.1.2. Installing the AX.25 software.

The software comes in two parts, the kernel source, and the user programs.

14.1.2.1. The kernel source.

If you are using the 1.3.* kernel source then all you have to do is build the kernel as you would normally.

The following should be safe:

```
# cd /usr/src/linux
# make config
# make dep;make
```

Be sure to answer `yes' when you are asked if you should include the AX.25 support in the make config step. You will also need to answer `y' to including SLIP if you want the AX.25 code to support a KISS TNC or if you intend running a version of NOS on your system so you can link the two. You will be asked if you wish to include the Z8530 driver. If you wish to support the Ottawa PI driver then you must answer `y' when asked: Do you want to be offered ALPHA test drivers ? and: Other ISA cards ? then `y' when prompted: Ottawa PI and PI/2 support.

14.1.2.2. The user programs.

To install the user programs you should try:

```
# cd /usr/local
# gzip -dc ax25-utils-030.tar.gz | tar xvvof -
# gzip -dc ax25-utils-030-patch1.gz | patch -p0
# cd ax25
```

You should then read the README file and follow its instructions. When you are happy you are ready to compile, then do:

```
# cd /usr/local/ax25/src
# make clean
# make install
```

14.1.3. Configuring and using the AX.25 software.

Configuring an AX.25 port is very similar to configuring a slip device. The AX.25 software has been designed to work with a TNC in kiss mode or an Ottawa PI2 card. You will need to have the TNC preconfigured and connected to your serial port. You can use a comms program like minicom or seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the slattach program. For example:

```
# /usr/local/ax25/bin/axattach -s 4800 /dev/cua1 VK2KTJ &
```

would configure your /dev/cua1 serial device to be a kiss interface at 4800 bps, with the hardware address VK2KTJ.

You would then use the ifconfig program to configure the ip address and netmask as for an ethernet device:

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 257 up
```

To test it out, try the following:

```
/usr/local/ax25/bin/call VK2DAY via VK2RVT
```

The call program is a linemode terminal program for making ax.25 calls. It recognises lines that start with ` ' as command lines. The ` .' command will close the connection.

You also need to configure some items such as the window to use. This necessitates editing only one file. Edit the /usr/local/ax25/etc/ports file. This is an ascii file containing one line for each AX.25 port. You must have the entries in this file in the same order as you configure your AX.25 interfaces.

The format is as follows:

```
callsign baudrate window frequency
```

At this stage not much of this information is used, it will be picked up and used in later developments.

Please refer to the man pages in /usr/local/ax25/man and the README file in /usr/local/ax25 for more information.

14.2. Ottawa PI/PI2 card driver.

The Ottawa PI card is a Z8530 SCC based card for IBM PC type machines that is in common usage by Amateur Radio operators worldwide. While it

is most commonly used by Amateur Radio Operators, it could be pressed into service in other fields where it is desirable to have the features of a Z8530. It supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem, and improved hardware design.

A driver for this card has been written by David Perry, <dp@hydra.carleton.edu>, and is available from in the standard linux kernel. Please refer to the AX.25 section for configuration details.

14.3. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users. Brandon S. Allbery, KF8NH, contributed information to explain how to achieve this.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must chosoe a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

15. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

terryd@extro.ucc.su.oz.au or terry@orac.dn.itg.telecom.com.au

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

16. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on niksula.hut.fi. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and I believe there is an `IRC' channel that sometimes is used to discuss them as well.

To join the Linux HAMS channel on the mail list server, send mail to:

linux-activists@niksula.hut.fi

with the line:

X-Mn-Admin: join HAMS

at the top of the message body (not the subject line).

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

Netters,

I got a freebee today (Halicrafters SX-43). No Manual.
Curious could someone supply the Circa of this radio??
I currently have a Halicrafters S-76 which I believe to be from
about 1965.

Don't know if this radio works yet. Lots of dust on it inside and out.
Look like it recieves CW (don't know about SSB - Anyone??)

Has a knob for Crystal Phasing (i Think) any help on that one???

Thanks,

Andy Cropley

>
>thanks

Eugene -

The Motorola Minitor I or Minitor II pagers can open monitor a frequency. These particular pagers have a squelch circuit so that you don't hear squelch noise when the pager is not receiving a signal.

The Pageboy, Pagecom and Director series lack the squelch circuit and will beep and open up when they decode the proper two tone sequential page that they have been set up for.

I have a considerable number of Minitor I, Directors, Pagecom and Pageboy pagers for sale. Price varies depending on the model and accessories.

If you are interested e-mail me at brinkley@ols.net

I worked at a couple of radio stations in Bend from 1988-91. Loved the area and the cheap tags/no sales tax...but hated the income tax and the high property taxes which I indirectly paid through the high rents that I was charged.

Can't blame the people, though...they're smart enough to know that the legislature would enact a sales tax and then not follow through with their promises to reduce income and property taxes. Luckilly, the state constitution prohibits enacting the sales tax without voter approval.

The MF10 chip was eliminated by the instructions in the TAPR TNC
board I bought. It was in the first few pages - amidst the parts
listings. If it's the same 'kit' you can save a buck or two.

Steve Gomolski <steveg@dmv.com> wrote:

>1. How do I know if I'm on a repeater?

Generally, most operation on 2m seems to be via repeaters. If you hear beeps at the end of transmissions or occasional CW in the background, it's almost certainly a repeater. To find local repeaters, one method is to buy the ARRL repeater directory (at $7, it's worth it). Another method is to find a local Radio Club. In addition to telling you where the repeaters are, they'll also tell you which ones are frequently used by their members, etc.

>4. Are there any frequencies I should avoid xmitting on?

I think 144.0 to 144.1 is CW-only. Check the band-plan (in the repeater directory, or your study guides) for more information.

>5. How do I go about initiating a conversation on an empty freq?

In essence, you do a CQ, but if you call CQ on a repeater, people will probably think you're strange (and probably ridicule you). "KE6MKS monitoring" seems to be fairly common in Southern CA; other places may (probably do) differ. If you know someone you want to call, "KD6RDC, KE6MKS" or "KD6RDC, this is KE6MKS" are the preferred formats; "KE6MKS calling KD6RDC" is not.

>6. What advice would some of the oldtimers give to a new ham?

I'm not by any measure an OT yet, but (as in most areas of life), if you find a group you don't like, leave. If the folks on the 940 repeater are rude, use a different one. Join the ARRL--whether you like them or not, (1) there are the only organized representation for hams in DC and elsewhere, and (2) because of (1) they can be a valuable source of information about what's going on. Ignore Burt Fisher.

Last, but by no means least, HAVE FUN!

You mean the bunch of (mostly) old men meeting each week at the
ham radio club to drink a beer (away from wife's eyes) and recounting
how nice things were, when they were younger ... :-)))

That's NOT the hobby I started 17 years ago.

HF contact are now mostly "contest style" 5 seconds exchanges.

VHF repeater are CB-like nonsense.

Technically, the most difficult thing is to get the japanese made
tranceiver out of the box and reading the programming instruction
of the on-board computer.

That's today Ham-Radio ...

Have a nice day,
Thierry,

In article <44qbbg$c20@eagle.dmv.com>, Steve Gomolski <steveg@dmv.com> wrote:
> 1. How do I know if I'm on a repeater?

Listen to the squelch tail. After you release the PTT on a simplex transmission and no one answer your call, you will hear nothing at all. On a repeater, even if no one answer your call, you will hear something coming out of your speaker. This something is the repeater squelch tail. It may sound like 'Ker Chuck', if the repeater does not have what is called a curtsey tone. Or you will hear the curtsey tone if the repeater is programmed to emit one, which may be one or more of various beep tones.

There is also a hang time. The repeator usually does not stop transmitting immediately after you release the PTT. It is usually programmed to continue to transmit anywhere from a fraction of a second to more than 10 seconds. During this time if no other one is talking, you will receive a signal with no other sonud except perhaps some background hiss.

Listen to a repeator for a while you will learn all the fine art of being a welcome repeator citizen. Enjoy your radio and hobhy.

Not always. Try 14.268, 14.250 as well as the freqs nearby those. I'm
sure others will provide other freqs as I don't remember them all.

Bored, lonely people? Sounds like someone who types judgemental messages
about everyone else. Oh, well, when one speaks from such a lofty academic
position as instructor at a vocational school, possibly we should all
stop and absorb the pearls of philosophical logic that the oracle will
utter.

It's a nice server, but not 100% accurate. This is no fault of the server but of the 'base' FCC data, which is somewhat incomplete. The experimental FCC database may be getting updated, daily, with newly issued licenses, and upgrades, but it may not be getting updated with license renewal data.

Hi,
I've been told that it is possible to connect your home Base Station
to the Local telephone system and then access it from your mobile
station. What kind of equipment is needed for this? Are there
stringent operating guidelines? I would suspect there would be
problems with others trying to use your telephone.

Thanks,

Dave Foster

Here is a loaded question for this newsgroup I am sure:

I am just getting into this hobby .. have been highly
active in the computer and BBS world but my son and I are
taking a class through the local ham radio club .. and I
am wondering what is the recommended radio for someone
starting out .... (I don't know if I should admit it from
some of the posts here .. but as a no-code novice).
Looking at ht type but want to know what is recommended by
experienced hams. Thanks in advance!

From: Steve Gomolski <steveg@dmv.com>
Message-ID: <44qbbg$c20@eagle.dmv.com>
Source record: 237499

Greetings,

I'm a brand new ham. I've just purchased my first radio today: Realistic HTX-202. Primarily I'm interested in doing packet but am saving for a TNC. In the mean time I thought I'd do some rag chewing to get to know my fellow hams. This is where the questions start.

1. How do I know if I'm on a repeater?

2. If I'm on a repeater, how do I know if its private or public?

3. If I want to join in on a conversation, how do I know if I'm welcome?

4. Are there any frequencies I should avoid xmitting on?

5. How do I go about initiating a conversation on an empty freq?

6. What advice would some of the oldtimers give to a new ham?

Any help that I can get at this point would be greatly appreciated.

Thanks in advance, 73

Steve G. N3WAT

>my fellow hams. This is where the questions start.

Congrats! Now here's my version of the answers:

>1. How do I know if I'm on a repeater?
The best advice I can give on this one is to buy a repeater directory. ARRL publishes the most common one, but there are others. This will tell you what repeaters are in your area, their frequencies, and all kinds of other good stuff.

>2. If I'm on a repeater, how do I know if its private or public?
The repeater directory you bought after Question #1 will normally indicate this. Also, if it's a closed system, you will usually not be able to use it without special access codes.

>3. If I want to join in on a conversation, how do I know if I'm welcome?
You're welcome! In over four years of hamming, I have yet to feel "unwelcome" in a conversation! Especially as a new ham, LOTS of people will be willing to give you ALL kinds of advice (they'll talk your ear off if you let them). So don't worry about not being welcome. You will usually be MORE than welcome. Also, it does help to actually have something to add to the topic of discussion. :-)

>4. Are there any frequencies I should avoid xmitting on?
Once again, look at the repeater guide. It should have a "band plan" in it that will tell you how the 144-148 MHz band (and others) is divided up for different uses. Although not illegal, you probably want to avoid transmitting in, for instance, the satellite sub-band.

>5. How do I go about initiating a conversation on an empty freq?
On a repeater, something short and to the point is usually enough. I would use something like "N3WAT monitoring". If someone's monitoring, they'll hear you. Of course, getting them to respond is a different matter. On simplex, I usually use something a tad longer, like "CQ FM simplex from N3WAT".

>6. What advice would some of the oldtimers give to a new ham?
I don't know if I classify as an old-timer, but I've got plenty of advice.
-- For now, buy a repeater guide. It is of immense help.
-- Get on the air as much as possible, make friends. This will help spark

your interest in other types of operation.
-- Join a local ham club. This will let you get to know people, and will be
a way to get involved in any activity you're interested in. Make
sure it's an active club, that does a wide variety of things.
-- HAVE FUN! This hobby can be as fun or as boring as you want it to be!

Hope I helped some. The above answers are as I see things. YMMV.

Enjoy the hobby,
Russ KI7FL

No-code Tech, you mean, right? Nothing at all wrong with that!

>Looking at ht type but want to know what is recommended by
>experienced hams. Thanks in advance!

You're already involved with the VVARC? Good group, that. The members there will have plenty of input; I'll offer mine too: It's hard to go wrong with the Radio Shack HTX-202. No, you don't get a DC-to-daylight receiver, 200 memories, a dishwasher, or a cool brand name--you do, however, get a rugged, reliable radio with very good RF performance, and at a pretty reasonable price. I think they were on sale for $199 last month; it'll happen again, I'd bet. You do get 12 memories (enough for most people, in my experience; there's not too many repeaters up there), CTCSS (PL) encode and decode, DTMF keypad, and an alkaline AA case (keeps a charge a lot longer than NiCds; good for emergencies--or for using the radio as soon as you unpack it (-:).

If you're looking for more bells and whistles, Rory, KE6NIG, will probably be happy to show off his Yaesu FT-530, which is a very nice HT (tell him hi for me when you see him, OK?). It's a dual-band unit (144/440), but there's not a whole lot of 440 activity in the Victor Valley. Bob, KD6RDC, will probably have some words of wisdom as well.

FWIW, I have both an HTX-202 and an FT-530, and I'm happy with both. They do different things, but do them well.

>Looking at ht type but want to know what is recommended by
>experienced hams. Thanks in advance!

Hi Ronald,

Well my advice to the HT is, that the best ht is the cheapest HT you can get hold of. If you buy a new multi-band multi-channel-multiple-scanning radio you might soon find that its use as a *radio* is rather limited and that you had better spend the mony on something real.

Most HT's are only used to key the nearest repeater (without calling) or to poke other folks nose with your rubber duck on ham fests.

Consider a proper FM mobile/base station or a multimode portable radio, and develop your interests.

The main prob I have with morse code is that it stops most new hams from getting
cheap (or building they're own cheap) rigs, the chepest commericial rig
I've seen for vhf is 100 pounds and virtually no projects for vhf while
hf seems to be swamped with cheap easy use designs (apart from the morse
only rigs :) I'm stuck to using a 3 channelled pmr rig
sigh
let those who want cw use cw, and those who dont want to use use what
they wanna use

Yes.
I think you would value and protect your drivers' license
to a greater extent if it were harder to get and to keep it.

>
>>On average, they have more of a _stake_ in their licenses.
>
>Why do coded licenses have a greater _stake_ in amateur radio? The amount of
>extra spectrum is miniscule.

Spectrum ^= Stake. Stake = caring, commitment, vested interest.

>
>>Stakeholders tend to be more responsible than non-stakeholders in any
>>endeavor: they have more to loose. Learning the code
>
>What do the coded licensees stand to lose that the unwashed, uncoded
>licensees don't?

Sunk cost. It is a principle of good business to ignore sunk costs,
but no one does. If you have invested $10,000 in a new business,
you are MUCH less likely to conclude that the project is worthless
than if you had not invested. Even if the value of an investment
is $10,000 on January 1 and falls to $1000 on June 1, the
typical Jan 1 investor who pays $10000 will feel that his stake is
worth more than the June 1 investor who pays $1000. In reality both
have something worth $1000 on June 1, but the $10,000 investor
thinks it is worth more. The $10,000 investor will go to greater
lengths to protect his original investment than the $1000 investor,
even if his potential effect on the outcome is precisely the same.
Of course, this is illogical....the investment is
worth $1000 no matter who owns it, but the original investor
behaves differently. Using this principle of human behavior, we
can conclude that if a license is hard to get it will increase
the probability of good behavior from that licensee.

>
>>is a significant investment in time and money for most people
>>and it is not in human nature to ignore sunk costs.
>
>Once again, massive effort and costs are not a prerequisite for having
>either a driver's or an amateur license.

I expect that we would have more careful drivers (and fewer
fatalities) if drivers' licenses were harder to get and
easier to loose.

>>needs to be some mechanism to ensure tomorrow's HF operators
>>are stakeholders. Other than the code, IMHO that mechanism is
>>currently not adequate.
>
>What mechanism is the referent of your last sentence there?

I am referring to the fact that the theory tests are too easy.
Without the code test, the theory tests alone do not ensure
that we will have a pool of operators who will nurture and care
for their hobby.

>
>Your whole premise is screwy. Every licensee has a stake in amateur radio.

I think you and I have an honest disagreement. Economists call
it "taste." Your tastes are different than mine.

>I have yet to see a connection between "knowledge" and "responsibleness".

I am not making this connection. I am making a connection
between caring and responsibleness.

>
>>(Responsibility) is caused by them being bigger stakeholders.
>
>You keep repeating this claim but you cannot back it up.

It is a premise I see evidence for everywhere. Take littering
for example. People who don't care throw garbage out their
car windows. People who care don't. A second principle is
that some people have more to loose than others, even if they
don't care. You don't see upper class members of society
littering on the highway as often as you see rednecks doing it.
The upper class members have more at stake and more to loose.
I could provide a million examples. Obviously there are always
exceptions. We are talking in aggregate terms.
We are talking about _average_ behavior.

>
>>pretty well. I am thinking of how to improve the licensing
>>procedure to encourage excellence.
>
>>I am of the school who thinks it might be nice if we could funnel

>>the commitment of today's HF operators into something more
>>marginally useful than CW. Are there many extra class hams
>>who say that?
>
>I would echo your sentiments, if I thought that the HF operators'
>"commitment" were something more than money.

I think it usually is something more than money. Sometimes, that
is all it is. But on average, it is something more.

>
>>Ham Radio's purpose is not to limit crowding or force people to
>>demonstrate commitment. Our purpose is to perform some legitimate
>>function. A requirement for commitment is not a purpose, but
>>rather a means to an end. We will be more effective with
>
>Commitment as a means to an end? I think I can parse that. Now show me how
>Morse Code testing ensures commitment.

Because code testing is hard. Without it, getting an
amateur license with full HF privileges will be too easy, UNLESS
we change the theory tests. I do not want to impose code test.
I want to impose harder theory tests. And I want to do it before
we drop the code tests.

At least change elements 3 and 4. I LIKE the no-code tech program
just fine. I spend most of my operating time on VHF. It would
be OK with me if we gave the no-coders some limited access to
HF, but I do not want to bet the whole farm.

Well, I'll tell you this, if the ARRL (which only claims to represent the interests of ham radio in the U.S., not every ham operator) ever pushes to totally drop the CW they'll never get ANOTHER dime of my money. As long as they support a basic CW requirement that any moron can learn (5 WPM), I'll keep my membership alive and well.

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the August, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:A Rock-Bending Receiver for 7-MHz
Author>Henderson, Randy - WI5W
Source>QST Aug 95, pp. 22-25
Abstract>A construction project suitable for beginners. Build a 40-meter direct-conversion receiver with variable crystal frequency control (VXO).

Digest>In this article, WI5W describes the construction of a direct-conversion receiver for the 40-meter band. The local oscillator is crystal controlled in a circuit that allows the frequency to be "pulled" over a range of up to 50-KHz. Since a slang word for crystal is "rock", he calls the process "rock-bending".

The construction project is designed for beginners. It uses a printed circuit board with an integrated circuit (IC) mixer followed by two stages of audio amplification and an active low-pass filter. The first stage of amplification and the active filter use the two halves of a dual op-amp chip. The output audio amplifier is a familiar LM-386N IC.

The frequency pulling is done by a series-resonant circuit using three r.f. chokes in series as the inductor and a dual-gang polyethylene-film variable trimmer as the capacitor.

An etched and drilled PC-board is available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269, for the price of $6.50, including domestic shipping.

Title>TA2:The CMOS Super Keyer 3
Author>Russell, Jeff - KC0Q and Southard, Bud - N0II
Source>QST Aug 95, pp. 26-28
Abstract>Construction details for a sophisticated electronic keyer using CMOS ICs.

Digest>In QST Nov 1990, these two authors described the construction of the "CMOS Super Keyer II". It used a microprocessor with a small number of additional electronic components to provide a keyer having many sophisticated features and the availability of four pre-recorded CW messages initiated by push-buttons. The use of CMOS technology provided a circuit with such low power drain that three AA alkaline cells could be used as the power supply.

The Super Keyer 3 is an upgrade of the previous model and makes use of a current state-of-the-art microprocessor along with an EEPROM preloaded with much more versatile software. This new unit now offers six pre-programmed messages, each with as many as 255 characters. If that is not enough, the system can be reprogrammed to provide 18 messages of 85 characters each! The power drain is still sufficiently low that three AA cells provide adequate power. All memories are non-volatile, so there is zero drain when the unit is shut off.

Hardware construction of the new design is almost as simple as with the previous model. It uses a Motorola 68HC705C8ACP microprocessor and an EEPROM chip, both of which must be preprogrammed, two common general-purpose transistors, six push-button switches, a small loudspeaker, and a handful of passive components.

Because of the programmable memory, the keyer has great versatility. It can be programmed to mimic the feel of almost any earlier keyer. Also, the pushbutton-activated messages can contain pauses, allowing key-entered sequences to be inserted during use. For example, a description of current weather can provide pauses for insertion of the temperature, wind direction and speed, and other variables. After the insertions, the remainder of the message is activated by a touch of the button.

A partial kit of parts containing a pre-programmed microprocessor, all other critical components, a drilled and etched PC-board, and a detailed operating manual, is available from Idiom Press, Box 1025, Geyserville, CA 95441 for the price of $58.00, including domestic shipping. For foreign orders, the price is $60.00 incluing postage by surface mail.

Title>TA3:The Battery Sentry
Author>Bryce, Michael - WB8VGE
Source>QST Aug 95, pp. 29-32
Abstract>Construction details for a charging monitor-controller. It displays the status of current and charge, and also provides alarm and/or automatic action if preset limits are exceeded.

Digest>The Battery Sentry is a relatively sophisticated electronic system that monitors the condition of emergency or portable power sources such as those in RVs, boats, vacation cabins, or at emergency sites. The system is designed to report on the condition of the power-generator side, and also the battery side, of the combined system.

The unit contains an LCD display that can be switched to display generator output, the battery voltage, or the charge/discharge current. Included is an audible alarm with adjustable setpoints that will emit beeps if the alarm limits are reached. The beeps are differentiated by tone levels. If the battery charge drops below the alarm level, low frequency beeps are sounded with one-second repetition rate. If there is a malfunction in the power source, beeps are at a high tone. Also available is a switch closure for either type of alarm, which can be used to take some automatic remedial action such as shutting off all or part of the load if the generator fails.

A kit of parts including the PC-board and all board-mounted parts except for the digital indicator is available from SunLight Energy Systems, 2225 Mayflower NW, Massillon, OH 44647, for the price of $71.00, including domestic shipping. The digital voltmeter indicator can be had for $35.00 extra.

Title>TA4:Broadband Antenna Matching With the ARRL Radio Designer
Author>Sabin, William E. - W0IYH
Source>QST Aug 95, pp. 33-36
Abstract>Shows examples of using the ARRL Radio Designer software to design antenna matching networks.

Digest>The ARRL Radio Designer is a computer program that will analyze electronic circuits of many types. Mr. Sabin illustrates its use in designing a fixed-tuned LC matching network to broaden the operating bandwidth of an antenna. The examples illustrated include a pi-network for matching a 20-meter antenna system to a 50-ohm source. Without the matching network, the antenna shows an SWR of 1.5 at the low end of the band, 1.7 at the high end, and about 1.35 at midband. After an optimal matching network was designed, the indicated SWR was flat between 1.0 and 1.1 over the entire band.

The second example is an 80-meter dipole that displayed SWR of 2.1 at 3.5-MHz., 1.3 at 3.55-MHz., and 3.5 at 3.7-MHz. With an optimized pi-network matching circuit, the SWR was reduced to below 1.6 over the 3.5- to 3.7-MHz. range.

The article gives detailed instructions for using the software and computer in solving these problems. But Editor WJ1Z, in a side-bar with the article admits that, in many cases, it is easier to adjust the variable inductors and capacitors of an antenna tuner by trial and error than it is to perform the theoretical calculations. The primary advantage of the calculations is that it provides the user detailed knowledge of what is happening in the circuit. The trial-and-error experimenter obtains no clue.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:HAL Communications P38 HF Modem
Author>Ford, Steve - WB8IMY
Source>QST Aug 95, pp. 71-73
Abstract>Review of new multimode digital controller that provides RTTY, AMTOR, PACTOR, and CLOVER modes on a plug-in computer board.

Digest>Until a few years ago, digital communications on HF were limited to packet, RTTY, and AMTOR. Then PACTOR and CLOVER modes appeared. PACTOR could be added to the multimode TNCs made by several manufacturers by a simple change of software. CLOVER, however, represented a complete change in operating principle and could be used only by operators willing to buy a quite expensive new multimode communications processor. So, for amateurs willing to pay no more than about $400 for a multimode processor, operating on packet, RTTY, AMTOR and PACTOR were the only choices.

Recently, two more modes: PACTOR 2 and G-TOR have been introduced but each of them, like CLOVER, has been offered by only one manufacturer. Consequently, the community of digital operators is divided between those who can only operate the four older modes, and three small groups, each of whom can operate the original four plus one of the new three.

There seems to be general agreement that the CLOVER mode is the most sophisticated mode, providing the highest speed of data throughput and the best ability to cut through noise. But its acceptance has been limited by the fact that only one manufacturer, HAL Communications, offers equipment to amateurs and their prices have been very high. Now HAL is offering their P38 HF Modem plug-in board, which provides AMTOR, RTTY, PACTOR, and CLOVER modes for a price under $400.

The P38 requires a personal computer with an open accessory slot using an Intel 286 or later CPU, a minimum of 640 bytes of RAM, hard disk, and at least one floppy. It uses a Texas Instruments CPU and also a digital signal processor chip, plus many other ICs on a densely populated plug-in circuit board. The original CLOVER modems offered several operating speeds and adaptive power control. That is, the transmitter output power was automatically reduced when the throughput was high, and increased if it dropped. Because of its limited capacity, the P38 board has dropped the adaptive power control feature and also the two highest speeds, which were seldom used by amateurs.

The reviewer found no problems in installing and operating with the P38 in his home computer. His opinion of CLOVER operation is that it was outstanding. He calls it: "the most efficient digital mode I've used to date".

He also tested the unit on AMTOR, PACTOR, and RTTY. The performance was flawless in all three, although he found operating AMTOR or PACTOR to be a big letdown after using CLOVER. In the RTTY mode, he was surprised to find that the performance of the P38's DSP was most dramatic. On several occasions, he was able to get good RTTY copy from signals that he could not hear!

The reviewer makes it clear that the P38 is an excellent piece of equipment, and CLOVER an outstanding operating mode. But digital operators must still face the fact that a QSO requires two stations. As long as all of them are able to operate certain modes, whereas only a small minority can operate each of several other modes, QSOs in those modes are going to be few and far between.

The manufacturer's list price for the P38 is $395.

Title>PR2:Quantics W9GR DSP-3 Audio Filter
Author>Swanson, Glenn - KB1GW
Source>QST Aug 95, pp. 73-75
Abstract>Review of the updated W9GR DSP unit featuring 13-bit processing and enhanced firmware. It is available as a kit for home building.

Digest>Only three years ago, a QST article by Dave Herschberger - W9GR (QST Sep 92) introduced digital signal processing in the form of an inexpensive electronics package available as a kit for home construction. They were built by thousands of amateurs who quickly spread the word of the seemingly miraculous noise reduction in phone operation, combined with the availability of extremely narrow CW filters without ringing, that DSP makes possible. Mr. Herschberger quickly formed a company, Quantics, to continue development and sale of DSP kits. He also licensed his design for manufacture by others.

The original kit model, the DSP-1, used a processor with only 8-bit words, so its dynamic range was quite limited. In addition, it had other limitations and was clumsy to use. Now Quantics has introduced the Model DSP-3, which is also available as a kit.

The new model overcomes all of the most prominent limitations of the earlier one. It features 13-bit processing, and a software AGC feature that tracks the signal level being received to maintain steady performance during QSB conditions. It provides 18 different DSP functions, selected by a multi-position rotary switch. The functions are: noise, notch, combined noise and notch, two SSB filters, seven different CW filters, CTCSS decoder, DTMF decoder, and special filters for rtty, HF packet, and SSTV.

The ARRL Lab tested the filters for shape factor, i.e. the ratio between the bandwidth at 6-dB. down and 60-dB. down. All were outstanding; one tested only 1.18! The performance in random noise reduction was found to average 15-dB. quieting, typical. The automatic heterodyne elimination was measured at better than 50-dB. with a single tone, and 40-dB. with each of two tones. An undesired signal is reduced by 50-percent in only 20-milliseconds.

The DSP-3 kit comes with circuit board, a user's manual, and all parts except for case and power supply. A case, complete with printed and punched front panel, is available for an extra $19. The manufacturer's selling price, by mail, is $156 in USA and Canada, $169 elsewhere. California residents must add 7.25 sales tax. Quantics' address is: P.O. Box 2163, Nevada City, CA 95959-2163. Quantics does not accept charge cards, nor do they have a business telephone.

TECHNICAL CORRESPONDENCE (TC)

Title>TC1:Revisiting a Smart Charger for NiCd Batteries
Author>Hammond, Tom - N0SS
Source>QST Aug 95, pp. 78-79
Abstract>Describes problems with the charge controller described in QST Sep 94, and how to correct them.

Digest>Mr. Hammond built a charge controller in accordance with the instructions in the article: "A Smart Charger for Nickel-Cadmium Batteries" in QST Sep 94 (and also in Feedback QST Nov 94). He found that his unit charged at the FASTCHG rate until the maximum time limit was reached, 132-minutes. It never detected a full-charge condition, hence never cut back to the "TRICKLCHG" rate.

After consulting with the Maxim Company, the manufacturer of the integrated circuits used in the unit, he found that the output voltage of his power supply was not high enough. The minimum supply voltage at the terminals of the PC-board, with full charge-current flowing, must be no less than 2.0-volts d.c. times the number of cells in the battery pack. Therefore, a six-cell pack requires a minimum of 12.0 volts after accounting for the voltage drop in the lead wires, and elsewhere.

In addition, to prevent over-charging, it was necessary to modify the circuit so that the "VLIMIT" pin No. 1 is jumpered to the "REF" pin No. 16, NOT to the "V+" pin No. 15. He modified his PC-board to sever the trace between pin No. 1 and pin No. 15, and added a jumper from pin No. 1 and pin No. 16. After making the changes and providing a higher voltage supply, the charger has worked perfectly.

Title>TC2:Transmission Line Characteristic Impedance and Losses
Author>Straw, W. Dean - N6BV
Source>QST Aug 95, p. 79
Abstract>Explains that calculations published in QST Apr 95 were unrealistic due to the use of parameters outside the limits of real experience.

Digest>In an article about antenna tuners by Frank Witt - AI1H, in QST Apr 95, N6BV authored the sidebar titled: "The TL Program for Transmission Lines and Tuners", on page 33. His calculations showed that, in a 450-ohm ladderline feeding a 100-foot long dipole operating at 1.83-MHz., there would be 11.59-dB. power loss in the ladderline itself! Several writers expressed astonishment, if not skepticism, at this statement.

Mr. Straw reviewed his calculations and realized that he was assuming the characteristic impedance of the line itself to be purely resistive, at 450 + j0.0 ohms. But if the line has only a very small reactance of -j3.3 ohms, the power loss is cut nearly in half to 6.62-dB. From this fact, he reflected on the fact that the use of computers has allowed theoretical calculations to be carried out assuming extreme conditions, even conditions that would never exist in the real world. Approximations of parameters that are normally "close enough" for engineering calculations often lead to distorted results when the other parameters are extreme.

That the hypothesized antenna represented an extreme condition is indicated by the fact that the same computations show an operating SWR of 1482:1. No SWR meter in existence is capable of measuring such a value. Also, he realized that the calculation is very sensitive to

small changes in the velocity factor of the line. But tiny changes in the manufacturing process could cause that value to deviate enough from the average again to make the calculation meaningless.

In summary, the author points out that the computer program TL is a wonderful educational tool, and with it one can "experiment" while sitting in front of the computer and see the effects of the various parameters on the final results. If the values put into the equation are reasonable, the results will be meaningfully accurate and useful, but one must never forget the principle: "Garbage in - garbage out".

HINTS AND KINKS (HK)
Conductor: Newkirk, David - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Controlling Fractional Horsepower Induction Motors
Author>Svoboda, John - W6MIT
Source>QST Aug 95, pp. 76-77
Abstract>How to control the speed of conventional induction motors.

Digest>W6MIT uses small a.c. motors for remotely adjusting antenna tuners and for other miscellaneous uses. But such use requires some degree of speed control, and the speed of conventional induction motors cannot be varied by changing the voltage applied. Instead, the frequency and/or the duty cycle of the applied a.c. must be varied.

Most small a.c. induction motors of the "capacitor run" type and the winding is in the form of a coil with a center tap. Most have three leads representing the two sides plus the tap. Some have a fourth wire, which is connected to an internal thermobreaker. Typically the capacitor is connected from the center tap to one side of the line. To reverse the direction, the capacitor connection is switched to the other side of the line.

With the article are schematic diagrams that illustrate two suggested circuits. One provides for limit switches to be actuated by the controlled device that shuts off the motor when either end is reached. The other shows how a relatively high-speed motor can be made to operate at a very slow speed. It uses an NE555 timer to generate short-duration pulses to the motor. He cautions that not all motors will perform well in this manner.

Title>HK2:Solving Stubborn RFI in a Viper Auto Alarm System
Author>Baker, John - KA7SWI
Source>QST Aug 95, p. 77
Abstract>How to prevent RFI from actuating a vehicle intrusion alarm.

Digest>KA7SWI has a 1990 Ford diesel truck with an HF transceiver installed that he uses on several bands. He also installed an auto alarm system to protect his radio equipment against break-in. But when

he transmitted on 20-meters, the intrusion alarm sounded.

Even after many telephone consultations with the engineering department of the alarm manufacturer, he was not able to find a way to prevent false alarms while transmitting on the 20-meter band. To solve the problem, he finally resorted to mounting a toggle switch in a hidden location that de-energizes the auto alarm. Now, when he operates on 20-meters, he shut off the alarm.

He rarely forgets to re-energize it because, whenever he leaves the truck, he knows that he has to "arm" the alarm system. When he does so, he hears a confirming "beep". If he does not, he knows he has forgotten to flip his secret switch to the "ON" position.

Title>HK3:Audio Feedback Cured During Voice Operation With the TS-850S Transceiver
Author>Moller, Jan K. - K6FM
Source>QST Aug 95, p. 77
Abstract>Preventing audio feedback by use of an audio isolation transformer.

Digest>K6FM operates a Kenwood TS-850S transceiver; its received audio passes through a SuperSCAF bandpass filter, a digital signal processor, and a speaker/headphones selector switch. When monitoring his own signal on his headset, he heard a low-frequency rumble indicating audio feedback.

All decoupling methods that he used failed to end the apparent feedback. But when he plugged his headphones into the output of the transceiver, bypassing all the audio accessories, there was no rumble. He finally eliminated the problem by inserting an audio isolation transformer between the external-speaker jack of the transceiver and the external audio gear. He used a 1:1 600-ohm line isolation transformer (Radio Shack 273-1374) which works well, even though the speaker output is designed to drive an 8-ohm load.

Title>HK4:Yet Another Zero-Beater
Author>Tiemann, Bruce - N6URH
Source>QST Aug 95, p. 77
Abstract>Make a whistle to provide a reference tone for adjusting a transmitter to zero-beat.

Digest>N6URH notes that to zero-beat a CW transceiver often requires the operator to adjust the incoming signal to the transceiver's correct receiving pitch, by ear. Many amateurs have built audio oscillators to give them reference tones to listen to while tuning the receiver. He has made a tone generator that is, no doubt, the simplest and cheapest one that can be devised. He has made a whistle out of a piece of plastic tubing with a cap over the bottom end. By blowing across the top, he generates a reference tone.

The tone of the whistle is adjusted by trimming the length to the proper value. In fact, the author deliberately trimmed it slightly too short. When he put the cap on the other end, he was able to adjust the cap slightly up or down, having the effect of changing the length of the tube and making a fine adjustment to the pitch.

He observes that any kind of tube will work; plastic, metal, or other material. Also, the diameter is not critical. The approximate length required can be calculated from the formula: L = 1100 / (4f), in which L is the length of the tube in feet (1-foot = 30.5-cm.), f the frequency in Hz. The author's whistle, which resonates at 800-Hz., is 3-7/8-inches (79-mm.) long, 3/8-inch (9.5-mm.) inside diameter.

FEEDBACK (FB)

Title>FB1:"A Continuously Variable Bandwidth Audio Filter" QST Jul 95
Author>Bramwell, Denton - K7OWJ
Source>QST Aug 95, p. 79
Abstract>Correction.

Digest>In Figure 1 on page 31, C8 is a 0.0022 mfd. capacitor. On the schematic diagram, there should be a connection between pins 4 and 8 on U5. To get the right range in the clock, it may be necessary to decrease the value of C22 slightly.

NEW HAM COMPANION (NHC)

Title>NHC1:A Paint-Pole Antenna
Author>Salvate, Anthony J. - N1TKS
Source>QST Aug 95, pp. 60-61
Abstract>Making a collapsible antenna from a telescoping tubular paint-pole.

Digest>N1TKS needed an antenna that can be assembled and disassembled easily and quickly for operation on 17- and 20-meters. Also, it should not attract the attention of neighbors nor the landlord. He built one out of a "Paint Pole" that he found at his local hardware store.

A Paint Pole is a telescoping pole made of three pieces of aluminum tubing. It is designed to support a paint brush on the end to reach high places. It is manufactured by Quickie Manufacturing Company, Box 156, Cinnaminson, NJ 08007.

The pole extends to about 16-feet (3.28-m.) but that is not quite long enough to reach resonance on 20-meters. He extended it using a telescoping whip bought from Radio Shack (their stock number 270-1405). The total cost of the assembly is about $25.

When the pole is extended, it is held in place by two plastic compression nuts. To ensure good electrical continuity at the joint,

the author uses a hose clamp on each side of the nuts and slips a short piece of copper braid under the clamps to act as a jumper.

He erected the pole at the corner of his house and fed it as a quarter-wave monopole against four radials strung along the ground. The antenna rests on a concrete slab and, part way up, it is fastened to a horizontal railing by means of Velcro pads attached to both rail and pole. The antenna is fed with 50-ohm coax; the center conductor connected to the bottom end of the tubing and the braid to the radials. When it is not in use, he collapses it to its minimum length where, he says, people think it is a support for a beach umbrella.

He reports excellent results on both bands, including QSOs with European and South American stations.

Title>NHC2:Speaker-Mikes and Replacement Microphones
Author>Whitaker, Robert B. - KI5PG
Source>QST Aug 95, pp. 62-63
Abstract>Guide to selecting and using replacement speaker-mikes with hand-held transceivers.

Digest>This article contains basic information on speaker-microphones and how they are used with hand-held transceivers or other ham gear. Most commercial radios, as with most amateur radios, use amplified electret mikes. Hand mikes for H-Ts and other transceivers designed for portable or mobile use usually have a push-to-talk button on the housing, itself.

Schematic diagrams show how plugs are wired for use with H-Ts produced by ICOM, Yaesu and Kenwood. Also, the article contains a listing of sources of plugs compatible with microphones for use with H-Ts manufactured by those three companies.

Many commercial speaker-mikes perform superbly with amateur gear and are found at hamfests and flea markets. To make use of such a unit, one should cardfully disassemble it and make notes or a schematic drawing of the internal wiring. Identify the ground wire, the speaker lead, the microphone wire, and the PTT line. Do not hesitate to rewire the leads to fit individual needs.

Kenwood TH-series radios are keyed by connecting the PTT line to chassis ground. With ICOM, Yaesu, Alinco, and Radio Shack units, the connection must be from the microphone lead to PTT ground, usually with a dropping resistor in series with the microphone line. (The PTT ground is not the same as the chassis ground). The Owner's Manual probably contains the needed information. If not, contact the manufacturer's service department and ask for assistance.

Title>NHC3:The Casual Contester
Author>Swanson, Glenn - KB1GW
Source>QST Aug 95, p. 64, 70

Abstract>Advice to a beginner in radio contests.

Digest>KB1GW offers helpful suggestions to newcomers to radio contests. His cardinal rules are to relax and to make the contest fun. Many hams enter contests on a casual basis, participate for a time, and quit when they have had their fill. This is a good way to get started in contesting.

First, one must learn the rules of the contest; the easiest way to do that is to read about it in QST or other publication. If the rules are not clear, ask another ham to clarify, either on the air or in person. At first, set a modest goal - perhaps to make 25 contacts. As familiarity with the process grows, the goals can be increased.

Consider the possibility of joining a team through a local radio club, or just with a group of friends. Many hams find that the camaraderie of a hard-working contest team provides the most fun of all.

Title>NHC4:The Doctor is IN
Author>Various
Source>QST Aug 95, pp. 65-66
Abstract>Questions and answers regarding subjects of primary interest to beginners.

Digest>Questions discussed in this issue include: how to find the grid squares of QTHs; the current utility of the 10-meter band; whether or not to change call signs when moving to a different call zone; comparing the computing power of the human brain to computers; monitoring weather satellites; certain strange symbols and abbreviations used on Internet; synchronous detection; and others.

Title>NHC5:Back to Basics
Author>Miller, Dave - NZ9E
Source>QST Aug 95, pp. 67-68
Abstract>Advice to beginners regarding purchase of equipment.

Digest>This article lists suggestions and cautions for new hams:

1. In buying new gear, don't pay for more features than you need, or can use.
2. Before buying equipment, talk with as many other hams as possible to benefit from their experiences.
3. Buy from a dealer who is trustworthy and can be relied upon for help and advice after the purchase.
4. Don't invest a large sum in used equipment. It may turn out to have hidden flaws that are beyond a novice's ability to deal with.
5. For antennas, start out with a simple and basic one. A good beginning antenna is a dipole, as long and high as possible, fed with 450-ohm ladder line and a balanced antenna tuner.

Title>NHC6:A Simple 2-Meter Bicycle/Motorcycle Mobile Antenna
Author>Allen, John S. - AA1EP
Source>QST Aug 95, pp. 69-70
Abstract>A J-pole antenna made from twin lead, supported on a fiberglass safety flagpole for bicycles makes a simple and effective antenna.

Digest>AA1EP illustrates a simple but highly effective mobile antenna for 2-meters. It is simply a J-pole made from twinlead supported on a fiberglass bicycle safety flagpole.

J-pole antennas made from TV twinlead have been described in many places. The author attached his to a 6-foot (1.8-m.) long, 1/4-inch (6-mm.) diameter fiberglass bicycle flagpole with vinyl tape.

RADIO TIPS (RT)

These are short items, scattered among the articles in the New Ham Companion section, of interest to newcomers.

Title>RT1:DX QSL Managers
Author>Anonymous
Source>QST Aug 95, p. 61
Abstract>Explanation of the function of DX managers and how to QSL with them.

Digest>Many active DX stations find it very burdensome to fill out a QSL card for every QSO. To relieve them of that burden, thereby extending the time they can spend making QSOs, many volunteers act as QSL managers. The DX station only needs to maintain a detailed log and periodically to supply it to the QSL manager; the manager, then, fills out and mails the cards.

After working a DX station that uses a QSL manager, one must remember to send the confirming card to the manager at his address, not directly to the DX station.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Searching for Life Among the Stars
Author>Shuch, H. Paul - N6TX
Source>QST Aug 95, pp. 37-39
Abstract>The current status of the search for extraterrestial intelligence and how amateurs could participate.

Digest>The author, N6TX, is the executive director of the SETI League, a private non-profit organization dedicated to searching the heavens for any evidence of intelligent life outside of earth. Hearing of the search for extra-terrestial intelligence (SETI) raises visions in many people's minds of flying saucer fanatics and little-green-men-from-Mars advocates. But the SETI activity is based on realistic evaluation by

sober-minded scientists reflecting on the fact that in our galaxy alone there are some 200-billion stars, a large percentage of which most probably are accompanied by planets, some of which are similar to those in our own solar system, including earth. It would be very strange, indeed, if among all of those potential sites for life to emerge, the only place where intelligent life has developed is here on Earth.

Scientists have reasoned that, since our civilization has evolved to the point that we can now communicate over vast distances of outer space with radio, perhaps there are other civilizations within reach of our present radio technology where they are active in communicating with each other, as we are doing. If so, perhaps it may be possible to "listen in" to their transmissions.

There are now in operation several SETI facilities. The one that has been running the longest with a large area antenna is at the Ohio State University near Columbus, Ohio. Built by the legendary John Kraus, W8JK, it is a unique antenna design that provides very large capture area using structures of modest size. Kraus is also the inventor of the "8JK Beam" (the first beam antenna used by many hams in the 1930s), the corner reflector (common in TV antennas), and the helical antenna (used widely in UHF installations of all types).

The Kraus radio telescope at Ohio State, also known as "Big Ear", has an effective capture area of 1000 square meters, which places it among the world's largest; but it was built under his direction by mainly student labor at a cost of less than $200,000! The cost of movable dish antennas of comparable capacity is now in the $100 million range.

The Big Ear has been used primarily for SETI since the 1970s and, in August of 1977, it detected the one signal that many scientists believe is the best candidate, to date, for a signal of extra-terrestial origin.

Until recently, NASA had a SETI project underway. Its budget was very modest by NASA standards, although large compared to privately-financed volunteer efforts. It was cancelled by act of Congress under the leadership of a representative motivated largely on religious grounds. Now the SETI League, financed by donations, is trying to pick up the slack.

The author of this article makes a persuasive case that radio amateurs, by combining their efforts, could perform a SETI search that would cover more area of the sky over more width of the spectrum in far shorter time than the combined efforts of all SETI operations now underway, or contemplated. His organization stands ready to coordinate activities and is offering in guidance in every aspect of assembling and operating an observatory. The equipment needed is no more elaborate and expensive than typical satellite stations now in operation.

Interested parties can obtain further information by joining the SETI League. Contact them at P.O. Box 555, Little Ferry, NJ 07643. They can be contacted by telephone from the USA at (800) TAU-SETI, by E-Mail to:

info@setileague.org, or via the World Wide Web:
http://seti1.setileague.org/home/pg.html. N6TX, himself, can be
contacted via Internet at: n6tx@setileague.org.

Title>GI2:Amateur Radio in World War 2
Author>Davis, Dan - W8LUX
Source>QST Aug 95, pp. 40-44
Abstract>Young hams made up a large fraction of communication
specialists in the armed forces during World War II. Relataes a number
of anecdotes of the war.

Digest>Young radio amateurs formed a reservoir of young men familiar
with the practical aspects of radio communications under all kinds of
conditions. These were some of the most valuable skills needed by the
nation when the war began. In general, the armed forces made good use
of those people and their knowledge.

Throughout the war, in every branch of the service and wherever forces
were located, hams made up a significant portion of the communications
personnel.

This article relates many anecdotes of hams in action.

Title>GI3:Hamming It Up in a Retirement Center
Author>Moren, Bob - K4CX
Source>QST Aug 95, pp. 45-46
Abstract>Describes operating amateur radio from a retirement center.
Advises arranging for an antenna and operating space before moving in.

Digest>Amateur radio has been a popular hobby for enough years that
a great many long-time hams are now of geriatric age. Many are in
retirement or nursing homes and are still able to enjoy their hobby from
their apartments or rooms. K4CX is one who made arrangements to put up
an unobtrusive antenna and now operates very satisfyingly.

Not all retirement centers welcome radio activity and outdoor antennas,
in many cases because they are ignorant of what is required and afraid
of imaginary problems that they think might arise. The author strongly
recommends that a ham contemplating a move to a retirement center
negotiate the arrangements for ham activities before moving.

Title>GI4:Sony USA's Top Ham, K1OKI
Author>Karpf, Steven - WJ2P
Source>QST Aug 95, pp. 47-48
Abstract>Biographical sketch of Mr. Schulhof of Sony USA.

Digest>Michael P. (Mickey) Schulhof - K1OKI is president and CEO of Sony
Corporation of America. He is a life member of ARRL and has been
licensed since the age of 16. This is a biographical sketch of his
professional and amateur careers.

Title>GI5:Bring 'Em Back Alive!
Author>Keith, Larry - KQ4BY
Source>QST Aug 95, pp. 49-52
Abstract>Advice from a collector and restorer of antique radio gear.

Digest>Anyone who lived through the 1930s recognizes the title of this piece as the motto of a Hollywood star, Frank Buck, who made frequent trips to Africa to obtain wild animals and about whom movies were made.

KQ4BY enjoys collecting old amateur radio gear and restoring it to operating conditions. In this article, he gives many hints concerning the ways he has learned to proceed.

Cleaning and mechanically repairing the gear is the first step. The next major step, and perhaps the most crucial one, is to bring the power supply back to life. Old electrolytic capacitors present potential problems and he advises that great care be used to avoid severe damage. He outlines a number of steps to follow, the most important one being to apply low voltage first, and only after discovering that it is safe to do so, gradually increase it.

Restoring old gear is a hobby in itself and the subject is much broader than can be covered in one article. Mr. Keith recommends that those who want detailed information consider subscribing to ELECTRIC RADIO, a monthly magazine devoted to the subject. The address is Box 57, Hesperus, CO 81326, phone (970) 247-4935.

Title>GI6:Just Rewards
Author>Bardsley, H. Vincent - KB3OM
Source>QST Aug 95, p. 53
Abstract>Inspiring story of how a handicapped young man overcame his limitations to become a licensed amateur, and how he benefitted from it.

Digest>KB3OM is a science teacher at a middle school who also teaches ham radio as a school extracurricular activity. He tells the story of a student, John Cendoma, who suffers from a number of handicaps. He is nearly blind and also has motor and speech difficulties. John became intrigued by ham radio and, in spite of his difficulties, obtained his license as KB3AHS. He first got onto the 2-meter band and, in order to carry on successful phone QSOs, he had to speak very clearly. Since he was strongly motivated to do so, he succeeded and now his speech is much plainer.

With his motivation, John was able to upgrade his license to General class and is now learning touch-typing. He is a sophomore in High School, is on the Honor Roll, and takes a full load of academic courses. Clearly, amateur radio has played a significant part in helping him overcome his limitations.

Title>GI7:How Do You Laugh on the Radio?
Author>McCallum, Steve - K4URX
Source>QST Aug 95, p. 54
Abstract>A theory of how laughter came to be indicated on CW as "Hi, Hi".

Digest>For almost the entire history of amateur radio, laughter has been indicated in CW by "Hi, Hi". Now Mr. McCallum shows that it was all a mistake! It was originally "Ho, ho", but an error by early-day brass pounders made it come out with an "i" rather than an "o".

In the original landline telegrapher's American Morse code, the "o" was dit-(slight pause)-dit and the "i" was the same as it is in radio today. So "Ho" was didididit dit-slight pause-dit and "Hi" was didididit didit.

In the beginnings of radio, International Morse code was adopted as standard. But American operators were taught by landline operators, whose laughter was "Ho-Ho" although it sounded like "Hi-Hi" in the radio code. So they carried on their teachers' tradition of laughter using the rhythmic didididit didit, just as hams do today.

At least, that is Mr. McCallum's theory.

Title>GI8:The Ham Twilight Zone
Author>Kremer, Steven - KF9ZA
Source>QST Aug 95, pp. 55-57
Abstract>Humor about learning Morse code, and imagining it in many noises.

Digest>KF9ZA has written a humorous article describing personal experiences during his first year in ham radio. Among other things, while studiying Morse code he "copied" messages that he detected in rattles made by nearby construction equipment, babbling of his 9-month old baby, and other miscellaneous sources. In learning ham lingo, he was frequently nonplussed to hear others say such things as "working barefoot" and "breaking through pileups". On one occasion, after ordering an item at a drive-by restaurant, when the cashier told him the price was seventy-three cents, he thought she was offering him good wishes.

> my fellow hams. This is where the questions start.

Steve G. N3WAT,

> 1. How do I know if I'm on a repeater?

There's an off-set freq (you transmit on one and listen on the other),
generally 600 KHz for 2 meters and maybe above or below your reception
frequency. (Don't know your experience level - but don't mean to insult.)
I'm not an expert on the HTX-202; but, it may have an option to set a
standard off-set. Most Repeaters have a "squelch tail" so the repeaters
transmitter stays active after you're done transmitting - this is
usally a good indication that you're at least bothering the system.
Other Hams will tell you about your signal - usally as a percent of
quieting on FM. If the repeater isn't strong in reception - don't
expect to be strong into the repeaters receiver.

> 2. If I'm on a repeater, how do I know if its private or public?

Ask. Or, check a repeater directory. A lot of private systems have
other options (PL Tone, etc.) required for access. May open system
have similar saveguards.

> 3. If I want to join in on a conversation, how do I know if I'm welcome?

To join in, I just say my call sign when the converation is being
"handed over" to another operator. In almost all cases, the operators
will acknoledge you and let you in. I've never been un-welcome. I
listen alot. Make sure you have something to add. For new ops, just
introductions and asking questions is enough. Some ops say "Break" to
get into a converstion - depends on the custom in your area; but, I
leave "break" for emergencies or other situations when the ops should
give you a "right of way" on the repeater for important (priority)
radio communication.

> 4. Are there any frequencies I should avoid xmitting on?

Get a 2 meter Frequency Band Plan and avoid any frequencies that are
not FM or expermental in designation.

> 5. How do I go about initiating a conversation on an empty freq?

I use "Hello any stations" (CQ) on simplex freq's; on repeaters I use: {KF0OS listening}. If you hear some other stations identify their station without calling someone - you can call them. It's a good way to start. Can call them if they're done (cleared) but have't "closed" or terminated station operations. Also, you can be very informal in calling - like, "Is there anyone listiening to this system (frequency)? This is N3WAT."

> 6. What advice would some of the oldtimers give to a new ham?

Relax, it's fun!

> Any help that I can get at this point would be greatly appreciated.

Relax. Have Fun! ID at least every 10 minutes.

BCNU,
Walter KF0OS

You've also told us THAT for the umpteenth-millionth time.

I suggest you find a hobby where there are no politics involved. Take up tennis, or horseshoes. Christ! You're spending your whole hobby telling us you don't like the rules!

Here's what we did. We didn't like the rules of Monopoly. Did we write our Congress, or whine on rec.radio.I-wanna-be-a-no-code-for-life? No, we just changed the rules. Same thing with CB'ers. They don't like CB, they don't like Ham, they chose to make up their own rules. You can hear them all night on HF. No call signs, no nothing. I suggest that is your real calling. Change the rules, or change the hobby. In either case quit whining.

Composing these lines on the screen of my notebook machine & having QTH on the outskirts of Moscow, I would like to share my perso-nal thoughts with all of you concerning a role of amateur radio.

Actually, I got my first licence in 1976, at age 16. For Soviet conditions it was typical : designing and building up "homemade" setup. For myself on that early stage it meant non-expensive commercial vacuum tube radio set; "homebrew" quite sensitive tube converter for 10m band; "solid-state homebrew" non-transis-tor AM transmitter for the same 28 MHz (constructed inside large metal box of former laboratory signal generator) + "homebrew" GP +... incredible pleasure on the air.

Then, I went "a little lower" on CW using HF spectrum only. Most of time I have spent at local club radio station UK9ADS. Even now I still remember more than well all those late nights, a wonderful QSOs with many exotic LIVING voices through espe-cial palette of TIME...

In my view, ham radio is a true precious source of human freedom. Living in Communist country, you may have valued a chance of un-censored talk with somebody else who was SO FAR AWAY and that man was not a ghost, not at all. "Precious Window To Outside World" as I have always called all of it tuning knob of reliable non-KENWOOD transceiver around 3.00 A.M. somewhere on "14" while the first signals from North America were becoming more and more louder in early 80s...

"Precious Window To Outside World" - how I realize and treasure into my heart some particular sense of amateur radio. 73!

Ronald J. Bowden (editor@heart_talk.win.net) wrote:
: Does California issue AR Tags?

: Ronald J. Bowden : H.E.R.O. (Home Educators' Resources Online)

Yes, and they are separately dealt with from CA's environmental plates($40 purchase and $25 a year). The AR tags have an initial cost(I think it is $20..but it has been 10 years since I got mine...) and no cost beyond normal (excessive) auto tax you would pay anyway to renew your vehicle.

Some folks were complaining about $400 a year..that is high...but that is probably beaten by some charges in CA...the CA tax is a function of how much the car cost to purchase and it's age! Oh...and if you buy it out of state...they charge it to you as you try to register it the first time...and you are required to register a vehicle within 10 days of moving into the state....

Welcome to California...now hand over your fortune!

144. CATCCjr Q&A #1

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-03 00:00:00 UTC
From: steve.hajducek@bytewise.org
Message-ID: <127.9060.20@bytewise.org>
Source record: 237523

Subject: CAT Control Center Jr. Q&A #1
Date : 1995 - Mon. Oct. 3 18:40 Local/ Tues. Oct. 3 21:40 Zulu
From : Steve Hajducek, N2CKH
TO : ALL RADIO AMATEURS

UPDATE:

As announced yesterday the Demonstration/Sharware version of CATCC is now available for all interested parties. The purpose of the DEMO version of CATCC is to allow as many people as possible to opportunity to experience CATCC without any obligation to purchase and to provide a fairly large beta testing group.

CATCCjr, is an older baseline beta version of CATCC, that has had many features reduced in scope or capacity and has had removed from it altogether many key capabilities. CATCCjr only provides logging to a CT(tm) .RES compatiable ASCII file, the DX-dBASE(tm) database manager of CATCC which provides full logging, awards tracking, reports, printing is NOT included. Also missing are the DX-Sleuth(tm) and Accu-Prefix(tm) features and support for on-line callbook lookups.

CATCCjr will FULLY control Kenwood and Yaesu H.F. radio equipments, and Yaesu FT-650 or FT-736R for VHF/UHF (no other radios or transverter operation is provided in the DEMO) and a TNC for DX-Cluster(tm) monitoring, as well as an AEA MM-3 contest keyer, Hy-Gain DCU-1 rotor system and a voice keyer or other devices such as antenna switch boxes or other CW keyers on the parallel printer port.

Remember CATCCjr is only a DEMO. The full commercial version of CATCC is scheduled for release in mid to late November '95. Many new features are still being integrated and tested and refinements to existing features are constantly being made.

This DEMO version has NO registration fees and NO support is offered.

It is available on the support BBS at 1-908-363-2760 and on the ARRL BBS as CATJR100.ZIP and is over 3MB in size! It will take about 35 minutes at 14.4KB using Zmodem protocal.

I have also broken it down into four files (one for each install disk) as CATJR1D1.ZIP, CATJR1D2.ZIP, CATJR1D3.ZIP and CATJR1D4.ZIP for added conveinance.

The multifile distribution is now on the following ftp sites:

ftp.qrz.com
grivel.une.edu.au

Should anyone desire, since the DEMO is so large, I will mail copies
for $5 US in the 48 states and $10 US outside the 48 states.

A few comments about CATCCjr/CATCC beta.

INSTALLATION:

At this time you MUST install the software to the default
C:\CATCC subdiretory. If you fail to do so the software
will NOT work.

Also at present the software assumes that your installation
of MS-Windows is to the C:\WINDOWS subdirectory. If this is
not so, you MUST modify the CATCC.INI and SETPORTS.INI files
that were copied to your Windows subdirectory.

They currently look like:

```
[Installable ISAMs]
dBASE III=C:\WINDOWS\SYSTEM\xbs110.dll

[dBase ISAM]
Deleted=On
```

You would need to change the specification for WINDOWS in the
second line to what ever you installed your windows as.

OPERATION:

When running CATCCjr, and using a TNC in the TNC transmit window
above the Macro Buttons and to the left of the Spot Window, you
can only type in alphanumeric characters. You cannot type the
Ctrl-C or Ctrl-Z you may be use to typing at this time. Provided
is a non-programmable macro button for Ctrl-C, for Ctrl-Z type
/EX instead. This particular area has been high on the priority
list.

Kenwood radio supported has been added (preliminary) and works
very well, however when reading from Kenwood radios (TS-450S and
TS-850S tested extensively) a longer delay is evident compared
to Yaesu rigs (except for FT-990 and FT-1000). Also the data
from the Kenwoods is not always correct. This will effect the
Radio/Status command, Up/Dn Band button bar buttons and the
Log command. Work in this area continues.

Specific support for the TS-950 has not been included, such as
Sub VFO for I have not received the programming manual on the
TS-950 as of yet. The HF Sub VFO is only for Yaesu FT-1000 rigs
in the demo.

Please do not hesitate to e-mail any comments or bug reports, my
desire is to provide the best possible product to the Amateur Radio
community as I can.

Here are anwsers th the first few questions that have been received:

CATCCjr Q&A #1 -

How do I change the baud rate in SETPORTS for the radio ?

You don't. All Kenwood and Yaesu radios operate at 4800 baud, this may change in the future however.

Why can't I set my com ports IRQ's in setports ?

You must use the Windows Ports setup under control panel to make any changes to your serial port setup.

I have both Kenwood and Icom radios, I love your CATCCjr software after using it for just two days, my question is when will Icom be supported ?

As soon as I can get the needed programming information and equipment to test with. As of present, there is NOT any development underway for Icom.

I have tied to write a program for my FT-990, how did you get the FT-990 clarifier to work and to properly read back information from the radio ?

I sorry... but doesnt everyone know how to do these things ? Seriously, you must have eprom v1.3 or maybe later for the FT-990 to work well over the bus, as to the clarifier and other things... well I have to have my little trade secrets.

Why does the HF VFO sometimes show a six meter frequency when the VHF VFO is operating ?

Good question. Don't have the answer yet, it is a known bug. The HF VFO will cover 6 meters when the HF rig has six meter capability, I suspect that I have a Global variable declared that is at fault. It will be fixed it short order.

How can I get my TS-450 to stop beeping when using your HF VFO and spinning the VFO know... it is driving me nuts ?

In the manual you will find section 4-11-15 on page 52 allows you to turn off the Beep from the radio. It is very annoying!

When will the sub VFO on the TS-950 be supported ?

I just received the programming information on the TS-950, now all I need is some time and someone to test it.

Hi, I'm REALLY new to all this (in fact, haven't even gotten my license yet) and I was given two radio shack trancievers. they are the HTX-202 and the HTX-404. The 202 is a 2 meter unit, and the 404 operates between 430MHz to 450MHz. Since they were free, I guess I can't beat the price. But I was wondering what kind of modifications I could make to them, and how I'd go about doing it. These may seem like stupid questions to some, but I'd appreciate any help y'all could give me.

Thanks again in advance...

SB QST @ ARL $ARLB089
ARLB089 Vanity call rules set

ZCZC AG56
QST de W1AW
ARRL Bulletin 89 ARLB089
From ARRL Headquarters
Newington CT October 3, 1995
To all radio amateurs

SB QST ARL ARLB089
ARLB089 Vanity call rules set

The FCC has released a Memorandum Opinion and Order in its vanity
call sign proceeding, PR Docket 93-305. In response to several
petitions for reconsideration, several changes have been made to the
program as originally adopted. No starting date for the program has
been announced.

The FCC declined to adopt a change proposed by the ARRL and others
that would have limited the selection of vanity call signs, in most
cases, to the call area corresponding to the address of the
applicant. However, the FCC did limit requests for call signs
corresponding to Alaska, the Caribbean Insular areas, and Hawaii and
the Pacific Insular areas to licensees whose mailing address is in
the corresponding state, commonwealth or island. Thus, applicants
in the 48 states will be allowed to request a call sign from any of
the ten call sign regions.

The FCC concurred with suggestions that an amateur seeking the call
sign of a deceased, close relative, should hold an equal or higher
class amateur license than that held by the deceased relative. The
FCC said that the two-year waiting period following the death during
which the call sign is not available would allow close relatives to
upgrade, if necessary.

The FCC also has decided that priority should be given to
established clubs for obtaining the call sign of a deceased club
member. To that end, the Commission established a new ''gate,''
Gate 1A, that will follow Gate 1 in priority. By this method, the
call sign of a deceased amateur will be available first to a close
relative, then to a club. In order to be eligible, clubs will have
to have held a station license on or before March 24, 1995 (the date
of the FCC's Report and Order in Docket 93-305).
```

The new FCC Part 97 rules become effective November 17, 1995, but the FCC has not announced a starting date for the program. The new FCC Form 610-V for vanity call sign applications is not yet available. The opening of Gate 1 will be announced by FCC public notice. More information on the vanity call sign program was in QST for March 1995 (page 98); April (page 41); and May (page 95).

Unless there's been a change in 47 CFR Part 15 that I'm not aware
of, the unlicensed 1W operation is permitted from 160-190KHz.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 OCTOBER AND FORECAST FOR 04 OCTOBER - 06 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 02 Oct
Daily Proton Fluence >1 MeV: 2.3E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 4.2E+06
(normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Oct 05 Oct 06 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Oct: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to minor storm

Estimated Indices : A K Observed A Index 02 Oct
Learmonth 22 3333 5532
Fredericksburg 20 15
Planetary 20 12

Observed Kp for 02 Oct: 3033 4223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Oct 15 Active
05 Oct 15 Active
06 Oct 10 Unsettled
COMMENT: IPS Geomagnetic Warning 24 was issued on 29 September and is
current for interval 2-5 October. Recurrent geomagnetic activity in
progress.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Oct normal normal-fair fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Oct normal fair fair
05 Oct normal fair fair
06 Oct normal normal fair
COMMENT: Higher latitude HF ciruits may be degraded over the next three
days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
03 Oct -3

Observed Australian Regional MUFs:
Darwin MUFs were depressed 15-30% during intervals
04-07UT, 09-20UT. Townsville MUFs were depressed 15% during
interval 04-07UT, and at 09UT. Sydney MUFs were 15%
depressed 07-13UT. No data from Hobart.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
04 Oct -5 15-20% depressed for southern region australia
circuits. northern region mufs are expected to be near predicted
monthly values.
05 Oct 0 10-15% depressed for southern region australia
circuits. northern region mufs are expected to be near predicted
monthly values.
06 Oct 5 Near predicted monthly values
COMMENT: Mild geomagnetic activity currently in progress may be
degrading HF comms quality.

This would be nice except for the fact that it is Hiram P. Maxim.

So far, the most reasonable clue to the origins of the reference HAM has
been the usage of the word "ham fisted" by CW land line operators. Usually
in reference to the amateur community, but generally towards ANYONE with
poor sending abilities.

Similiarly, the word "lid" seems to have derived from beginning (i.e. poor)
operators (again in Land Line operation) that put a jar lid on top of the
sounder bar on the telegraph solonoid to assist in their copying of the code.
Hence "lid" became associated with poor operation.

Additionally, the term "bug" was used in a very derogatory method. But the
person behind the Vibroplex Company latched onto the term. And the rest as
they say is history.

: Dave

OK, I dont know about if any of this is true, but I have a HTX-202.

I got this info off of ftp.qrz.com

Subject: HTX202 NOT MODIFIABLE

Greetings HTX-202 Fans:

It seems that human nature dictates that every major item we purchase be
"hot rodded" into something other than what the manufacturer intended. Our
first car, our first radio, and now: the HTX-202. Regardless of the total
lack of necessity for most owners, everyone wants to broad-band the 202.

Perhaps in our evolution, there is a little CB radio mentality left under
the surface. Who knows? But hopefully, I can answer a few questions which have
yet to be answered to the ham community.

The HTX-202 is based on the ICOM 02AT with certain design modifications
besed on Tandy's specs. These variations include encode/decode, additional
memories, and a full width LCD display. Contrary to rumor, no part of the
radio is Kenwood or Yaesu! ICOM sold the rights to their design to Tandy to
do with what they would.

Whan Tandy sought to produce the unit, they went to their usual Korean
source for cheap gadgetry: MAXON. Maxon then built the 202 for Tandy, under
license from Icom. The HTX-202 is surprisingly sturdy, and well constructed,
considering that Maxon has the worst quality control in the industry.

Be that as it may, before Tandy would produce the 202, certain specs
had to be met. Foremost, after the repercussions from their 10-meter rig,
Tandy insisted that the 202 NOT BE CAPABLE OF MODIFICATION! Period.

This worked out well, as the tighter bandpass gives the 202 it's
exceptional selectivity and immunity to intermod. When you brag to your

friends about your tight front-end, just remember that the cost of this important function, is the lask of ability to kerchunk your local police department's repeater. Why complain anyway?

Most 202's will not take a BP-7 Icom pack. The BP-8 usually works well. If the Zener diode in the bottom-feed circuit is bad, only a 9.6-vdc pack or less will work. A minor headache at the very least.

ALWAYS: Slide off your NiCad pack when using external DC power from your vehicle or a power supply! Leaving the pack on while mobile puts too much burden on the Zener diodes, and generates heat at twice the normal rate. Save your radio... Take off the pack!

Unlike it's Icom brother, the 202 will not top charge an Icom pack while on external DC power. Refer to the warning above!

HIDDEN FUNCTION: Holding the <F>unction button while depressing the <L>ight button will cause the display lighting to remain on until the <L>ight button is pressed again.

HELPFUL HINT: Discard your belt clip... Install a commercial H.T. "D-swivel" available at any FM 2-way Business Radio dealer. Add the mount to your belt, and VOILA... No more dropped radios.

WARNING: DO NOT ATTEMPT TO BOTTOM-CHARGE THE STOCK NICAD PACK IN AN ICOM BC-35 OR CLONE CHARGER. NEVER, NEVER, NEVER!

DESIGN FLAW: Some early production (S/N 2500 and down) radios had the NiCad Zener Diode located too close to the finals, causing final transistor failure when used on external DC with the pack in place. This was remedied in production, and Tandy will remedy under warranty.

Hopefully, this will address all remaining questions and rumors in regard to the HTX-202. It can't be modified. Big deal! It is a sturdy, well-built, dependable radio and a bargain at the price. Be happy with a great deal on a great radio. My HTX-202 got me through in an emergency situation, where my 800-MHz commercial trunked radio failed... That's more than enough for me!

----- 73 de Jim. N9PEK @ WB9SLE.IL.USA.NA

P.S.: TNX Tandy... For once, I'm a happy customer!

Whelp there it is...

>TNC. In the mean time I thought I'd do some rag chewing to get to know
>my fellow hams. This is where the questions start.
>
Congratulations!

>1. How do I know if I'm on a repeater?
>
You'll hear a beep at the end of each transmission. Assume that 95% of
the QSOs you hear will be on repeaters.

>2. If I'm on a repeater, how do I know if its private or public?
>
Other parties will tell you (hopefully kindly). Generally, private
repeaters are owned by clubs affiliated with companies or schools for
their members. Also, if you can't "kerchunk" the repeater by normal
keying, then it's probably private, requiring a specific subaudible
tone, or else pressing of a secret DTMF tone sequence to awaken it.

>3. If I want to join in on a conversation, how do I know if I'm welcome?
>
99% of the time you are welcome. Wait for someone to unkey, then
key up and announce your callsign during the beep. The next person will
hear your call (or attempted call) while waiting for the beep, and pass
control to you. Say Hi, and I'm New, and pass control back to him, and
they'll befriend you. Ask if the repeater is affiliated with a club,
and ask when and where it meets, and if you can tag along.

>4. Are there any frequencies I should avoid xmitting on?
>
Listen for repeaters in the 145.00 - 147.50 range. (I'm doing this from
memory.) If the repeater's output frequency is below 147.00, then the
offset is negative, otherwise it's positive. 146.52 is simplex.
Stay away from 144.00 - 144.15; that area is CW and satellite.

>5. How do I go about initiating a conversation on an empty freq?
>
Kerchunk the repeater, and notice the signal strength reading on your
HT. If it's 3 bars or less, you'll probably have a hard time being heard.
Stepping to one side may improve things a great deal.
Key up, give your callsign, and say "listening" or "portable". If you're
desparate, give your callsign and ask if anyone is on frequency.

If you have a car, get a mag mount antenna. Do not pass go. Do not collect $200. If you have lousy range in your house, ask someone to show you how a "j-pole" antenna is built. If necessary, climb up on the house roof to be heard.

>6. What advice would some of the oldtimers give to a new ham?
>
Subscribe to QST, CQ, and/or Worldradio. Join a club. Go on a T-hunt. Ask someone to show you how a j-pole is built. Ask to see someone's packet setup. Ask what ARES is, and ask to work an event. Start studying code. Ask the repeater trustee if you can visit the repeater site next time he goes.

>Any help that I can get at this point would be greatly appreciated.
>
There will be one grouch out there waiting for you. Step around him and don't be discouraged. Always try to learn more.

>Thanks in advance, 73
>

<chuckle> That shouldn't be a problem.. France is, after all, flying OUR
F-15's and shooting OUR M-16's! Somehow I don't think they would risk angering
the United States - as we are their only source of weapons -and- protection.
But then again, I don't think this was meant to be a political discussion.. =]

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 04/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 04 OCTOBER AND FORECAST FOR 05 OCTOBER - 07 OCTOBER

1A. SOLAR SUMMARY
Activity: very low.

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 071/001

GOES satellite data for 03 Oct
Daily Proton Fluence >1 MeV: 5.5E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.5E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
05 Oct 06 Oct 07 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 05 Oct: 070/001

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: major storm

Estimated Indices : A K Observed A Index 03 Oct
Learmonth 37 3446 6443
Fredericksburg 25 17
Planetary 45 19

Observed Kp for 03 Oct: 4334 4433
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
05 Oct 28 Active to minor storm
06 Oct 15 Unsettled to active
07 Oct 10 Unsettled
COMMENT: IPS Geomagnetic Warning 24 was issued on 29 September and is
current for interval 2-5 October.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
04 Oct normal-fair fair poor-fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Oct fair poor poor
06 Oct normal normal fair
07 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
04 Oct -11

Observed Australian Regional MUFs:
Darwin MUFs were depressed 15-40%.
Townsville MUFs were depressed about 30%.
Sydney MUFs were depressed 15-30%.
No data from Hobart.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
05 Oct -5 15 to 30% below predicted monthly values
06 Oct 0 15-20% depressed for southern region Australia
circuits. northern region mufs are expected to
be near predicted monthly values.
07 Oct 5 Near predicted monthly values

COMMENT: IPS HF Communications Warning 25 was issued on 3 October and
is current for interval 4-5 October.

>So even venerable RTTY can beat out a human CW listener.

Okay Jerry, you build a RTTY system from scratch, and I'll build
a CW communication system from scratch, and let's see who'll
have a better working system. I can't wait to see how you
build a printing unit and keyboard from scratch.

You folks still don't seem to get it. The whole point of still requiring
a knowledge of code stems from desiring *every* ham worldwide to have
the ability to communicate via a mode in which the equipment can be
assembled by him/herself from components readily available, not
dependent upon complex mechanical devices nor exotic parts.
Whether one uses such a mode for daily comms has no
bearing upon whether such a knowledge should
still be required. Oops, I'd better quit
here since I seem to be running out
of space on this Wyse screen -
boxing myself into a
corner again.

160. Are you a member of an Amateur Radio Club?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-04 00:00:00 UTC
From: aruss36461@aol.com
Message-ID: <44vik5$cqr@newsbf02.news.aol.com>
Source record: 237389

I have been asked to research how different amateur radio clubs make innovative use of technology to communicate to, and with their members. I have volunteered to research this issue for the Montgomery Amateur Radio Club in Maryland. My goal is to present a report to the membership on how others are using packet, the internet, BBS services, voice mail, and even programmed repeater announcements to keep the flow of information in front of the members. I feel strongly that the time has come to consider the club newsletter as only one vehicle for the dissemination of information. Your comments are appreciated. If you are a member of a club, please share with me what your club does, or what you wish they did do.

When all responses are compiled I will make the total file available for anyone who wishes to see it.

Thank You.

I thought some may be interested in hearing MY ARRL tale. About 10 or 12 years ago I began considering rejoining the league after letting my membership lapse when they had raised the dues three years before. At the time our family finances were very tight and the $20 dues were a significant stress on the budget. Before I could join, however, another dues increase to $25 was announced. Naively believing that the leaders at headquarters would be interested, I composed a nice letter explaining how lower income hams like myself felt that they couldn't afford what seemed to be becoming a rich man's hobby, and the continuing increase in dues meant choosing between membership and equipment. I explained that all my equipment was either second hand or home brew so it wasn't a matter of thousands of dollars of equipment that I had to spend and in fact my personal expenses for ham radio were limited to about $150 annually. I sent out the letter and received a response from a vice president or something. He said he understood my concerns and had I ever considered LIFE MEMBERSHIP at ONLY $600!!! He suggested that I could pay it in smaller payments and I wouldn't ever have to worry about increases again. I can't believe he ever actually

read my letter and if he did he certainly didn't understand MY concerns or he would never have made such a suggestion. Needless to say, I didn't join and remain today a nonmember and somehow don't feel any less a ham for it. Perhaps if I ever see an indication that there are real people running it rather than politicians I may reconsider.

* = New data. T index may have changed.
^ = IPS predicted T index

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.

==========

2. FLARES AND SHORT-WAVE FADEOUTS - NONE

2.1 Comments on Solar Activity.
Solar activity was at very low to low levels this month.

The monthly sunspot number for September was 12.3 which
is the lowest value yet seen in the decline of this solar cycle.
The yearly smoothed sunspot number for last March was 22 and IPS
estimates that the smoothed value for September is close to 14.

A further reverse polarity sunspot region was observed during
the month and it is now highly likely that this and earlier
such regions are the first signs of cycle 23, which should
start "officially" sometime in 1996.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

DATE COMMENTS
5 Sep 95: quiet to unsettled up to 11UT then minor storm levels.
7 Sep 95: unsettled to active levels
8 Sep 95: no data from Learmonth, active to minor storm periods
observed at Canberra
11 Sep 95: active to minor storm levels
15 Sep 95: unsettled to active, with brief minor storm period 12-15UT.
27 Sep 95: quiet until 14UT then minor to major storm levels observed.

Most of the disturbances this month were coronal hole related. The disturbance
on the 27 September was not expected, in fact occurring in a recurrent
geomagnetic quiet preiod, and its origin is not known.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)
8 Sep 95: depressed 15% 21-23 UT
9 Sep 95: depressed 15% 00-04 UT
10 Sep 95: depressed 15-20% most of day
11 Sep 95: depressed 15% most of day
12 Sep 95: spread F during local night
13 Sep 95: spread F during local night
14 Sep 95: near to 15% below predicted monthly values, with
spread F observed 16-21UT.
16 Sep 95: spread F during local night
17 Sep 95: spread F during local night
21 Sep 95: spread F during local night
27 Sep 95: depressed 30% after local dawn (21UT)
28 Sep 95: depressed 30% until 17UT
29 Sep 95: depressed 15% 01-05UT

The strongest depression this month was observed on 28 September.
Ionospheric depressions are more likely in the equinox/summer
periods following geomagnetic activity.

>tion I need to make a decision on whether to get into Ameteur or not.

Joe,

the most obvious advice is to read a book. but I should like to sugesst to
check the ARRL's web page http://arrl.org or other amateur radio pages.

Moritz

Well since you must have some link to computing, the obvious thing to get
are morse code learning programs (FTP).

The manual of supermorse e.g. goes into details of code learning
strategies. Remember, 95% listening, 5% sending.

>I'm still waiting for the FCC to give me my callsign!

Scott,
There is a repeater database link available from one of the ham pages I have visited in the past. I found the list for Arizona. Not sure if they have the one you need but it might be worth a shot.

The link (as I best remember it) can be found from my web page:

http://www.primenet.com/~jem

In the new hobby section choose "amateur radio
in arizona" This will take you to a page with lots of great links. One of them (in the research section) is a link to a U.S. repeater map book with an on-line searchable database.

```
SB QST @ ARL $ARLB091
ARLB091 Comm emergency declared

ZCZC AG58
QST de W1AW
ARRL Bulletin 91 ARLB091
From ARRL Headquarters
Newington CT October 4, 1995
To all radio amateurs

SB QST ARL ARLB091
ARLB091 Comm emergency declared

Voluntary Communications Emergency Declared

The FCC has declared a Voluntary Communications Emergency. All
amateurs are requested to cooperate by relinquishing the use of the
frequencies 3857 to 3867, 3873, 3925, 3935, 3945 to 3955, 3960 to
3980, 7225, 7235, 7243, 7254, 7275 and 7290 kHz, for handling
emergency traffic resulting from Hurricane Opal.

The FCC Field Offices in Atlanta, Georgia, Tampa, Florida, and New
Orleans, Louisiana have contributed to this declaration.

Here are some specific emergency traffic net frequencies (in kHz):

Northern Florida: 3950 and 7254
Alabama: 3965 and 7243

SB QST @ ARL $ARLB090
ARLB090 Confab targets 40 meters

ZCZC AG57
QST de W1AW
ARRL Bulletin 90 ARLB090
From ARRL Headquarters
Newington CT October 4, 1995
To all radio amateurs

SB QST ARL ARLB090
ARLB090 Confab targets 40 meters

Amateur Radio societies in the Western Hemisphere have concluded their triannual meeting, where important topics considered included band planning (especially on 40 meters); growing Internet use by amateurs; electromagnetic compatibility of consumer devices; improved communication between the International Amateur Radio Union and its member societies; and implementation of the hemisphere's International Amateur Radio Permit.

Twenty-nine national Amateur Radio organizations from throughout the Americas were represented at the week-long conference in Niagara Falls, Ontario, hosted by the Radio Amateurs of Canada (RAC). Canada announced at the meeting that it has agreed to adhere to the IARP (the fourth country to do so) and had issued the first two permits to RAC President Farrell Hopwood, VE7RD, and IARU Region 2 Vice President Tom Atkins, VE3CDM.

Distinguished guests included Robert Jones, Director of the Radiocommunication Bureau, International Telecommunication Union (who is VE3CTM); Michael Binder, Assistant Deputy Minister, Spectrum Information Technologies and Telecommunications Sector, Industry Canada; Roberto Blois Montes de Silva, Executive Secretary, Inter American Telecommunication Commission (CITEL) of the Organization of American States (OAS); and Wayne Thompson, Mayor of Niagara Falls, Ontario.

Addressing continuing problems of interference between users of different modes in the 7000 to 7100 kHz range, the conference adopted a resolution calling for greater use of frequencies above 7100 kHz for communication within Region 2, particularly by digimodes in the band 7100 to 7120 kHz. Reduced dependence on frequencies between 7050 and 7100 kHz by digimode stations, and by SSB stations for communication within Region 2, was urged. The

conferees also agreed to discourage SSB operation below 7050 kHz, to discourage digimode operation between 7035 and 7050 kHz except for communication with amateurs in other Regions, and to renew their commitment to the IARU goal of achieving a worldwide allocation of at least 300 kHz in the vicinity of 7 MHz.

Member-societies also were encouraged to make greater use of the 10-MHz band for digital communication, since radiotelephone is not allowed there.

The group urged that member societies obtain Internet access and possibly establish their own Home Pages on the World Wide Web. Amateurs were encouraged to include their call signs as a part of their Internet addresses.

Region 2 President Alberto Shaio, HK3DEU, has now retired, and Thomas B. J. Atkins, VE3CDM, was elected to replace him as president. Reinaldo Szama, LU2AH, was elected vice president, and three new directors also were elected.

The 1998 IARU Region 2 conference will be held in Venezuela, hosted by the Radio Club Venezolano.

I inherited a Yaesu FTC-1143 UHF ht which is programmed with 5 business band frequencies in the 450.00 Mhz range. Unfortunately there is no manual with this radio and I need some help as follows:

1. There are only 5 channels programmed. Is that the maximum number or can it be programmed up to 10 (or more)?

2. Is it keyboard or computer programmable? If keyboard programmable, what are the codes or sequences? If computer programmable, where can I get the software and cable?

3. What is the frequency range and can it be programmed for the ham band?

4. Can anyone provide a copy of the manual and for which I would be prepared to pay.

Any and all help will be appreciated.

Thank you.

[text deleted]

Some of that was true, some false. Truth, the HTX-202 isn't designed
to permit operation way outside the amateur bands (a good thing IMHO).
Any "mod" the purports to do so is a fake. Tandy denies that any of
the radio's technology was licensed from Icom, and a side by side
comparison of the schematics seems to confirm that, though it was
designed to accept Icom accessories such as spkr/mics and battery packs.
Yaesu also uses roughly the same spkr/mic circuit, as do some of the
third tier manufacturers, Icom set a quasi-standard in that regard.
Truth, Maxon does make the units under contract to Tandy. The zener
diode overheating babble was just that, babble. The steering diodes
are just ordinary diodes, and they shouldn't get hot in normal operation.
There are a number of good reasons why you don't want to run the radio
off of higher than recomended voltage, but this isn't one of them.

Gee, Dan, when you consider the subscription cost of any other
technical magazine, ARRL membership is, and has been, a great
deal. If you count everything else they're supposed to be doing
for us, it's a really great deal. You avoided joining the League
over *10 cents a week*. That just about buys a stick of gum today.
Now I do sympathize with the idea of supporting a family on a
small budget, I had to do it on less than $4,000 a year back
a long time ago (before food stamps and other Great Society
giveaways), but I still think I could have found a dime a week
somewhere.

Now the League person who told you about the life membership
was trying to do you a favor. If you plan to live a long time,
it saves you a *bunch* of money. But you are right that he wasn't
directly addressing your complaint. Considering the cost of paper
and postage, the League didn't really have a choice about raising
dues. It was that or fold the magazine. The ARRL has a better record
of keeping dues as low as possible than any other professional or
semi-professional society I can name. He should have explained that

to you, of course, but considering League officers are *unpaid volunteers* who spend most of their spare time servicing people like you, he may have felt your complaint was unjustified. (Staff is paid, below prevailing rate, but the elected officials aren't. They do get some expense money, but I've never met one who wasn't out of pocket for a significant amount.)

I have political differences with the League, but I don't have any illusions that they are ripping us off financially. They've been very prudent in that regard over the years.

178. Hallicrafters receivers

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-04 00:00:00 UTC
From: broehrig@admin.AUrora.EDU
Message-ID: <Pine.ULT.3.91.951003190407.23359A-100000@admin.aurora.edu>
Source record: 237452

I quickly looked thru some of my old QST's and saw that the SX-43 sold for $179 in 1948. The S-76 sold for $169 in 1951.

As I recall, and there may be exceptions, the Hallicrafters receivers that had a "X" in the model had a crystal filter and those without the "X" did not.

Receivers like these had several disadvantages:
1) Each band covered a large frequency range so it was difficult to get decent frequency accuracy from the dial.

2) They did not have product detectors and do not work well in modes that require use of the BFO (SSB, CW).

3) Frequency stability was poor.

4) Some suffered from rather poor sensitivity on the higher frequency bands.

HOWEVER - I love those old units myself. Some can be pretty good receivers with a little work and a refined operating technique.

I suffered thru my novice CW days back in the '50's with a S-38C. This was all I could afford at $50.00. That one made the IF oscillate to serve as a BFO - talk about losing sensitivity.

Later, around 1960, I went SSB using a Johnson Pacemaker transmitter and a S-53 receiver. That receiver was at least stable. I added an outboard Central Electronics sideband adapter that made it a whole new receiver.

Unmodified, about the only Hallicrafter receiver that was really good for the ham bands was the SX-101 (when SSB came into full swing). It was a heavy boat anchor that used a heater element to help preserve stability. I ended up trading a guy even for a Drake 2-B, which I still think was one of the best receivers ever made.

For many years I longed to get my hands on one of the Hammarlund SP-600's. I finally did and after installing a product detector and a decent AGC circuit, it makes a fine, stable receiver, although it has the old lack of bandspread problem.

Andy, I don't have a manual for the SX-43 but I do for the S-76 if that's of any help.

Bob, K9EUI

Sometimes they actually do!

Just a few weeks ago, I was sitting in a Wal-Mart parking lot, talking on the radio. A couple of young, scantilly-clothed young ladies saw the antennas, came over to the vehicle and said "Hi...uh, can we use your car phone? I need to call my work and I don't have a quarter."

These are two very different rigs. The FT-1000D sells for about $4000
and runs 200w of power. It has the 500 hz cw filter and the
temperature controlled xtal oscillator. The MP runs 100w and uses
collins mechanical filters for it a is less complex for about $2700

185. Mod for Yaesu FT-530

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-04 00:00:00 UTC
From: hbcsc274@csun.edu
Message-ID: <44t2v9$1hf@nic-nac.CSU.net>
Source record: 237459

Here is the summary of a mod that I've put together from talking to people
on the phone, radio, and email for the Yaesu FT-530. It is a very simple
mod and it allows extended rx & tx.
This mod only applies to the newer models of the 530. I don't know what
serial number implies the newer model, but my 530's serial number begins
with 4J381xxx and was purchased in June 1995.

1. take off the battery pack from the bottom of the radio.
2. unscrew the four screws on the bottom to release the bottom plate.
3. after you open the plate, you'll see a green wire on the right side
of the radio (if you hold it with the front panel on top).
4. simply cut this green wire and use some electrical tape to prevent it
from touching other parts of the radio.
5. replace the bottom plate and screw it back in.
6. attach the battery
7. hold both the up & down Mhz arrow buttons and press the power button at
the same time. this will enable to the mod. It is like a toggle, if you
do it again, it will disable to the mod.
8. Now you should have rx 110-180, 300-500, 800-950, and tx 130-180, 400-480.
Note: this mod will reset your radio and all memories will be erased.

Here is a second mod you can do to get more rx.
1. On the 70cm band, program your radio's lower (L) and upper (U) memory
limits to 300 and 950.
2. Turn to the Lower memory channel.
3. Press MR once and you should see a four tiny little arrows right below
the channel number.
4. Once you see these little arrows, you can enter any frequency
from 300-950 Mhz directly on the keypad.
You can also store these new rx frequencies in memory if you like.
Note: Although you can enter 800-950 Mhz into the radio, I have not heard
anything in this range. It is rumored that the components to receive on
this band is no longer made in the FT530.

Disclaimer: Perform these mods at your own risk. They are not guaranteed
to work on your radio. And remember not to transmit out of band!!!

any questions or comments? Send to hbcsc274@csun.edu

In some areas, cops are required to calibrate the radar after each
stop, others do it just at the beginning of each shift.

Lotsa luck in getting the calibration records while you're on the
roadside - they don't carry them in the car (I think). In fact, to
even suggest it would be a bad move becuase that suggests that you're
going to fight the ticket, making it more likely that he'll show up at
the trial (bad for you) because he remembered you. However, after he
hands you the ticket and you go your separate ways, over the next few
days do a motion for discovery on the officer's logs for that time
frame. It should record when the radar was calibrated.

Not an answer to your question, I'm afraid, but I'm curious as to whether you guys can hear European long wave broadcasting on your side of the pond? Examples are the multi-hundred kilowatt stations on 198 kHz (BBC Radio 4) and 252 kHz (Atlantic 252) which are both in English, plus numerous French and German language stations between about 153 kHz and 270 kHz, in steps of 9 kHz.

: My 30-year-old garage door transmitter or receiver kicked the bucket,
: and I have to use the push-button inside the house to open the door now.
: I have a 2-meter unit at home that I could leave on all the time, and
: I was thinking of hooking up a DTMF decoder to the audio output to
: momentarily close a relay, causing the door to open.

: I was wondering if anyone knows of a device (or easy circuit) that
: can decode a DTMF tone sequence (not too expensive)?

: BTW, I tried a replacement Genie transmitter/receiver pair from a home
: store, but I it didn't work as advertised. I exchanged it for another
: identical unit, but the second one didn't work either. I even thought
: about an auto burgular alarm transmitter and receiver, but figured
: the range might be too small.

There are many chips that decode dtmf in the market, one such device
is sold by Radio Shack...
But have you considered the other option you have ? why not install
a rew receiver transmitter on your door, Black and Decker makes such
sets for a reasonable price...
As far as range is conserned, the less the better, if you want to
avoid false trigering from noise, other hams, cb radios, and other
door operners...

Steve Gomolski (steveg@dmv.com) wrote:
: Greetings,

: I'm a brand new ham. I've just purchased my first radio today: Realistic
: HTX-202. Primarily I'm interested in doing packet but am saving for a
: TNC. In the mean time I thought I'd do some rag chewing to get to know
: my fellow hams. This is where the questions start.

: 1. How do I know if I'm on a repeater?

To access a 2-meter repeater you transmit on a frequency 600 kHz above
(if above 147 MHz) or below (if below 147 MHz) the frequency you
hear the repeater on. If the repeater is open access, you know wou
have got on it by hearing the repeater transmitting for a short
time after you have released your talk button.

: 2. If I'm on a repeater, how do I know if its private or public?

Most private repeaters have some means to keep the public transmissions,
even on the repeater input frequency, from turning the repeater on. So
do some public ones, because of various interference problems that are
too complicated to go into here. Try to listen to repeaters in your
area and find who operates them (often a club) and how you can
get in touch with the operator for more dope on how to use the
repeater and how to help finance it. Try to decode the CW identification
of the repeater and look up the callsign in a callbook, or CD-ROM
callsign list, or some other way to get an address.

: 3. If I want to join in on a conversation, how do I know if I'm welcome?

The proper ham way is to say your callsign at a gap in the conversation,
but graduates from CB sometimes say "Break". Many hams prefer you
save "Break" for some kind of emergency, major or minor.

: 4. Are there any frequencies I should avoid xmitting on?

Any outside the bands permitted for the mode you are using, and
any that you can hear are in use.

: 5. How do I go about initiating a conversation on an empty freq?

On VHF (2 meters etc) FM say "N3WAT monitoring" or "N3WAT
listening for any call" or "This is N3WAT. Anybody around?"
On HF call CQ. Read the ARRL pamphlet "Operating an Amateur
Station" (or some such title) for advice on calling, etc.
Make calls short and listen carefully for replies.

: 6. What advice would some of the oldtimers give to a new ham?

Don't worry too much about what others do or say, just do the
right thing!

: Any help that I can get at this point would be greatly appreciated.

: Thanks in advance, 73

: Steve G. N3WAT

This is ridicules! People, people, people... A signature should tell us something we can't derive from the return address. Normally that means we know your name, we know your return address.

We (the net at large) could care less what your phone number is, your fax number, or your CB radio callsign. If you have 12 computer accounts, we don't want to know!

Remember rule #1; if your signature is longer than 4 lines you are a braggart (and look that up in the dictionary for emphasis). One line is really good, two lines, you are getting suspect, four lines and you are really showing enough colors to start making "us" queezy. 18 line signatures means you have very low self-esteem. 18 lines with a box around it means you are a sniveling, whining nerd, with very low self-esteem. No offense intended, but vulgarity added for emphasis.

199. Re: Where is HR clipart hiding ??

Every few months someone posts a query looking for amateur radio clipart.
I did it, others have done it and Jerry has offered his two cents worth:

jgardner@netcom.com (Jerry Gardner) writes:
> The ARRL bulletin board and several FTP sites that mirror the ARRL
> server have ham-related clipart. This clipart, however, is of very low
> quality. I have yet to find a source of high quality ham clipart. If
> you find any, please let me know.

Boy! I'd even PAY for some good art work that I could use in the
newsletter I publish.

----> I SEE AN OPPORTUNITY FOR A TALENTED ARTIST HERE! <----

I'm not about to commission an artist to do it for me, I'm suggesting
that there seems to be a demand for amateur radio related clip art.
Someone with the skills could make a lot of people happy while making
a little money on the side.

Or, even better, place them in the public domain. :-)

There MUST be SOMEONE that can do up some high quality drawings along
these themes: radios, antennas, microphones, shacks-with-operator,
towers-with-climber, operator-in-(various places) [eg: in campground,
in boat, in parade], frustrated-man-with-hand-full-of-parts.....

I could go on....

I wonder what other folks have to say about it? What do you say?
Is this a worthwhile thing or not?

Message-ID: <9509048128.AA812825055@ccmail.anatcp.rockwell.com>
Source record: 237475

On: Tue, 03 Oct 1995 03:01:35 GMT, editor@heart_talk.win.net (Ronald J. Bowden) asked:

>Does California issue AR Tags?

Yes, California issues amateur radio plates. They are not concidered "vanity" plates. There is a one-time fee (I think it is $21.00), and no recurring surcharge on your registration. The AAA can process the paperwork for you if you are a member. Interesting side note: amateur radio plates are not in the general plate records or in the vanity plate records, this can cause an interesting problem if the local constabulary is trying to run the plate and they do not recognize that it is a radio plate. The California plate is a standard CA tag with the call sign, no "Amateur Radio" or "Radio Operator" text, lighting bolt, or anntenna tower graphic as some states have.

Gee, those frequencies do not look like AMATEUR RADIO frequencies.

If they were, the YAESU FT-530 would be a great radio for you. Other wise I would recommend you contact a commercial radio communications outfit like Motorola, etc.

Pat McCarty (mccartyp@crl.com) wrote:
: The HTX-202 is based on the ICOM 02AT with certain design modifications
: besed on Tandy's specs. These variations include encode/decode, additional
: memories, and a full width LCD display. Contrary to rumor, no part of the
: radio is Kenwood or Yaesu! ICOM sold the rights to their design to Tandy to
: do with what they would.

This is an "urban legend". Icom had nothing to do with th htx-202. The
ICOM story was invented by R/S salespeople to sell more 202's.

They have been told not to do it (I've seen both the ICOM to R/S letters
and the R/S letters to their salespeople), but it persists.

They do use the same batteries as some older ICOM radios.
Some headsets will work, but the later ICOM ones use a three connector
plug on the mic instead of the R/S two connector plug.

IMHO the htx-202 is a good value for the money, but it is poorly made
compared to ICOM and Motorola radios. I don't have another brand ht's so I
won't comment on their relative quality.

I have 2 htx-202's and both have been in the shop twice. The service plan
is a necessity.

73,

Geoff.

212. IPS Daily Report - 05 October 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-05 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <451p6j$igk@flare.syd.ips.oz.au>
Source record: 237286
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 OCTOBER AND FORECAST FOR 06 OCTOBER - 08 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 04 Oct
Daily Proton Fluence >1 MeV: 1.4E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 4.5E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Oct 07 Oct 08 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Oct: 71/6

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 04 Oct
Learmonth 18 3334 5322
Fredericksburg 20 33
Planetary 22 50

Observed Kp for 04 Oct: 3447 6534
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Oct 15 Unsettled to active
07 Oct 10 Unsettled
08 Oct 25 Active
COMMENT: IPS Geomagnetic Warning 25 was issued on 5 October and is
current for interval 8-12 October. Increase in geomagnetic activity
expected on 08 October based on recurrence.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Oct normal fair fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Oct normal fair fair
07 Oct normal normal-fair normal-fair
08 Oct normal normal-fair normal-fair
COMMENT: Higher latitude HF ciruits are expected to be
degraded 08-09 October.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
05 Oct -11

Observed Australian Regional MUFs:
Darwin MUFs were depressed 15-40% 03-05UT and depressed 30% 17-21UT.
Townsville MUFs were depressed about 30% 01-06UT, then 15% depressed.
Sydney MUFs were depressed 15% 04-19UT.
Hobart MUFs were depressed 15%.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
06 Oct 5 Near normal to 10% depressed
07 Oct 5 Near predicted monthly values
08 Oct 5 Near predicted monthly values
COMMENT: An improvement in HF comms conditions is expected
over the next two days. However, further degradation is
expected on the third day.

>may say "yes sir" if they don't recognize you. I played along
>sometimes.

Sometimes things can get out of hand. We had an initiation of new
airmen who arrived at Biloxi. Since we didn't get our first stripes
until 6 months after basic, we had nice uniforms that allowed officer
ensignia to be easily attached. We had one guy act as the captain
and a couple guys as "ropes." It was inspired to get their attention
and make them clean our barracks for awhile. It was really criminal.
(we had open-bay barracks back then). Anyway things went well for
a couple months until our cover was blown. I was payed $200 a month
back then, and the commander decided if I was to forfeit my pay for
2 months, he thought that would be fair. I think we all learned a lesson,
but it was worth $400 for the fun we had. I think the landscaping we
purchased and installed is still there.

Nothing to do with radio, but your comment brought back a funny memory.

>>I mean, it took me no study time at all to ace the written part of my
>>driver's test. Will you infer from that that I don't value my driver's
>>license?

>Yes.
>I think you would value and protect your drivers' license
>to a greater extent if it were harder to get and to keep it.

What do you mean "value" my drivers license? Without it my life would be VERY difficult. so I value it in that way. "Protect" it? You mean, like laminating it or making sure someone doesn't lify my wallet? Or do you mean "not screw around with traffic laws so I don't get nailed and have it revoked?"

I think the "value" I place on it takes care of the last part, and the value is independent of the work I put into getting it. The value I derive from my driver's license is not from the amount of time I put into studying and practicing to pass the tests for it, but from what I can do with it once I get it.

You have a funny source of value.

>>>On average, they have more of a _stake_ in their licenses.
>>Why do coded licenses have a greater _stake_ in amateur radio? The amount of
>>extra spectrum is miniscule.

>Spectrum ^= Stake. Stake = caring, commitment, vested interest.

Your silly REXXism aside, you haven't explained how coded licensees have a greater stake or vested interest than the non-coded licensees. I tried to provide one possible explanation and shot it down.

>>>Stakeholders tend to be more responsible than non-stakeholders in any
>>>endeavor: they have more to loose. Learning the code

>>What do the coded licensees stand to lose that the unwashed, uncoded
>>licensees don't?

>Sunk cost. It is a principle of good business to ignore sunk costs,

So if it's a good principle, why aren't you following it?

>but no one does. If you have invested $10,000 in a new business,
>you are MUCH less likely to conclude that the project is worthless

>than if you had not invested. Even if the value of an investment
>is $10,000 on January 1 and falls to $1000 on June 1, the

>worth more than the June 1 investor who pays $1000. In reality both
>have something worth $1000 on June 1, but the $10,000 investor
>thinks it is worth more. The $10,000 investor will go to greater
>lengths to protect his original investment than the $1000 investor,
>even if his potential effect on the outcome is precisely the same.

Of course, this has nothing to do with amateur radio. Who says that there are more "sunk costs" associated with the non-coded licensees than the coded ones?

I await your real proof of this and not some touchy-feely talk around it.

>>>is a significant investment in time and money for most people
>>>and it is not in human nature to ignore sunk costs.

>>Once again, massive effort and costs are not a prerequisite for having
>>either a driver's or an amateur license.

>I expect that we would have more careful drivers (and fewer
>fatalities) if drivers' licenses were harder to get and
>easier to loose.

Easier to lose (only one o) yes, but not harder to get. If you could get a drivers license just by standing in line, but you could lose it easily, and your life would be made considerably more difficult by not having the license than having it, you'd value it.

Note that the value derives from the permissions granted, not from the work put in.

>>>needs to be some mechanism to ensure tomorrow's HF operators
>>>are stakeholders. Other than the code, IMHO that mechanism is
>>>currently not adequate.

>>What mechanism is the referent of your last sentence there?

>I am referring to the fact that the theory tests are too easy.

These are independent of the code test. I tried to get a discussion going on beefing up the theory exams (hamexam@scisun.sci.ccny.cuny.edu) but no one seems to want to deal with it.

>Without the code test, the theory tests alone do not ensure
>that we will have a pool of operators who will nurture and care
>for their hobby.

The code test certainly doesn't do that. Witness the bedlam on 14.313 MHz or 75 meters. EVERY ONE of those bozos have passed a code test.

Code testing makes an extremely leaky lid-filter.

>>Your whole premise is screwy. Every licensee has a stake in amateur radio.

>I think you and I have an honest disagreement. Economists call
>it "taste." Your tastes are different than mine.

Economists like my definition of value better than yours, too. There's also
the concept of "utility" which you seem to ignore, but then again,
economists have a hard time dealing with irrational consumers.

>>I have yet to see a connection between "knowledge" and "responsibleness".

>I am not making this connection. I am making a connection
>between caring and responsibleness.

And you have not been able to make a credible connection between "caring"
and "morse code tests" or even your silly "sunk cost" argument.

>>>(Responsibility) is caused by them being bigger stakeholders.
>>You keep repeating this claim but you cannot back it up.
>It is a premise I see evidence for everywhere. Take littering

So provide some evidence.

>for example. People who don't care throw garbage out their
>car windows. People who care don't. A second principle is

You could just as well make the argument that people who don't (throw out
garbage) are fearful for the possible loss (a fine) that ensues.

>that some people have more to loose than others, even if they
>don't care. You don't see upper class members of society
>littering on the highway as often as you see rednecks doing it.

So you want to draw a correlation? How about: You don't see rednecks
ordering toxic waste furtively dumped in swamps behind factories, but
educated managers ordering it (who are better paid). Maybe you don't "see"
the upper crust littering because they're cleverer about where they litter
(e.g. off the side of the highway).

>The upper class members have more at stake and more to loose.

What greater stake to the "upper class" have? Your argument is trivailly
reversed: the upper class can escape to where the pollution, noise, and so
on are lesser (can you say "urban flight"?)

>I could provide a million examples. Obviously there are always

Each one of them as equally silly as the ones you have? This could get
tiring, refuting all of them.

>exceptions. We are talking in aggregate terms.

You can't talk in aggregate terms because you have no data to back up your
claims. You make assumptions, and appeal to the base emotions ("rednecks",
"upper class") to support your assumptions, which you state as bald facts.

>We are talking about _average_ behavior.

I eagerly await your citing sociological studies to support your positions.

>>>I am of the school who thinks it might be nice if we could funnel
>>>the commitment of today's HF operators into something more
>>>marginally useful than CW. Are there many extra class hams
>>>who say that?

>>I would echo your sentiments, if I thought that the HF operators'
>>"commitment" were something more than money.

>I think it usually is something more than money. Sometimes, that
>is all it is. But on average, it is something more.

I eagerly await your support for the fact that "on average, it is something more". Perhaps you have a statistically valid survey to support this? At least when I state my opinion, I make it clear that it is an opinion.

>>>Ham Radio's purpose is not to limit crowding or force people to
>>>demonstrate commitment. Our purpose is to perform some legitimate
>>>function. A requirement for commitment is not a purpose, but
>>>rather a means to an end. We will be more effective with

>>Commitment as a means to an end? I think I can parse that. Now show me how
>>Morse Code testing ensures commitment.

>Because code testing is hard. Without it, getting an

So is jumping through flaming hoops naked and drunk. Why not require that?

>amateur license with full HF privileges will be too easy, UNLESS

Why is getting something with ease something so bad _a priori_? Should I mention the ease with which I passed elements 1B and 1C?

>we change the theory tests. I do not want to impose code test.

So let's get rid of it.

>I want to impose harder theory tests. And I want to do it before
>we drop the code tests.

Why? Code tests are not good lid-filters. We've gone over this before.

>At least change elements 3 and 4. I LIKE the no-code tech program
>just fine. I spend most of my operating time on VHF. It would
>be OK with me if we gave the no-coders some limited access to
>HF, but I do not want to bet the whole farm.

Why not? We already lost one field to the loonies and Nazis on 14.313 and "Ye Olde Fahrtz" on 75 meters.

I agree that ours means something. I once called in a fire I happened upon, thru autopatch. It was about midnight. When the firefighters arrived, they asked if I could stay and work firepolice for them. Now, I ask you, there was a large number of people around the fire by that time, how did they know that I was the ham that called it in? Was it the fact that I was a 16-year-old sitting on the hood of a car, that wasn't even the closet to the fire? No, it is because the license plate on the car I was sitting said N1/SPX.

In Connecticut, vanity plates are $70/2 years. We pay $16 for a change of plate fee. We do not have to pay yearly, or even for the plates to be special made, which costs the vanity plates $50, plus $16.

Licenses Attainable:

Marine Radio Operator Permit - - Element 1
General Radiotelephone Operator - - Elements 1 & 3
GMDSS Radio Maintainer - - Elements 1, 3 & 9
GMDSS Radio Operator - - Elements 1 & 7
Ship Radar Endorsement - - Element 8
3rd Class Radiotelegraph Operator's Certificate
--Elements 1, 5, T1 & T2
2nd Class Radiotelegraph Operator's Certificate
--Elements 1, 5, 6, T1 & T2
1st Class Radiotelegraph Operator's Certificate
--Elements 1, 5, 6, T3 & T4

Who is offering it: W5YI-affiliated NATIONAL RADIO EXAMINERS in N.C.

What will be offered: Examinations on elements 1, 3, 5, 6, 7, 8, 9.
Contact us before hand about Code Elements--credit for elements
T1 & T2 is granted to Amateur Extra Class License holders who
passed their 20 WPM test.

TWO IMPORTANT ITEMS:
1: no FCC administrative fees (for now)
2: new question pools to take effect soon

#1: The FCC has suspended collection of the additional administrative
fees for licenses and endorsements.

However, our examination fees schedule continues in effect: payable
IN CASH at the exam session! See paragraph 10 for details, or
call me for an explanation (1-919-787-7608).

#2: Finally(!) a definite schedule of dates has been set for the
switch over to NEW question pools:

GMDSS (elements 7 & 9): 01 DEC 95
GROL /Radar(elements 1, 3 & 8) : 01 JAN 96
Radiotelegraph (elements 5 & 6): 01 FEB 96

This session is the last for the current question pools.

For greater detail, download the LONG VERSION, co-posted, that contains greater detail on exam session requirements, fees, and specific directions to the examination site.

Cousin Bob ;-)

I'm the trustee of a Mark4CR that is about 6 years old now.

The radio quality is fine...the controller is a bit limiting.

The controller CAN do what you want in most casses...though it
is an old design and getting long in the tooth by todays standards.
If you are looking for one stop shopping and No integration headaches..
then this is probably a way to go...but if "linking" is your game...
the controller has some specific limitations that might shoot you in
the foot. The biggest problem with their alternate configuration
scheme. Example: Assume that you want to set up a specific link
at 10Am...This could be done by programming in the parameters you
want in the repeater and telling it to assign the current setting
to a given parameter number(5 available I think..) The problem is
that the setting doesn't record any of the control I/O settings!
(Those extra user programmable I/O's that you would use to actually
send control lines over to the link radio...) This makes auto-linking
pretty close to impossible. If you ALWAYS turn things on by hand...then
there isn't a limitation.

Absolutely!! As an added benefit, this would also provide a quick and
easy way to track down "the Juice" and administer "final justice" to him
which the jury did not see fit to provide, due to his race, wealth, and
celebrity status.

236. 6 digit Grid locator

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-05 00:00:00 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9510051317.ZM1215@SALCIUS2>
Source record: 237420

The 5th and 6th digits of the grid locator give a more precise location.
Each 4 digit grid (2 degrees longitude x 1 degree latitude) is divided into a
26x26 matrix of very small grids that are 1/13 degree longitude x 1/26 degree
latitude (about 5 miles wide, 4 miles "high" in the middle latitudes of the
U.S.).

The 5th digit goes from west to east ("a" on western edge of the grid).
The 6th digit goes south to north ("a" on southern edge of the grid).

The ARRL Operating Manual explains how to manually convert your
latitude-longitude to 6-digit grid. There are also simple BASIC programs
available by ftp that convert lat-lon to grid locator and vice-versa.

The 6-digit grid locator is very commonly used on the amateur satellites.
When a DX station gives me their grid locator, I type it into my
InstantTrack satellite tracking program and the program puts an X on the
other station's location on the world map display. Pretty neat.

VHF/UHF terrestrial operators use just the 4-digit grid locators.
I've never heard grid locators used on HF (I wish they were!).

> price. But I was wondering what kind of modifications I could make to
> them, and how I'd go about doing it. These may seem like stupid
> questions to some, but I'd appreciate any help y'all could give me.

You have two very good radios there. They aren't small, they aren't flashy, they don't play games and they don't make very good scanners. They *ARE* however very good two way radios. They have great audio, their output power is conservatively rated at 5W max, they are rugged and they will work in areas where the radio interference makes other radios useless.

They accomplish that last point by being engineered as a HAM BAND ONLY radio. The front end is specifically narrow banded such that even if you could get it to receive out of band (you can't) the signals can't make it through the narrow filtering.

I own one of each and love them both. My HTX-202 has been running continuously for several months now as my packet radio. (Like a telephone BBS connection without the telephone line.)

I know of no modifications for either.

All that aside. I wish you well in your goal of getting an amateur license. (You didn't say you were going to get one, I just presumed that.) Please let us know how you're doing and don't be afraid to ask for help or advice.

Oh... Don't let any grumpy old men rain on your parade.

From: jimh@cnj.digex.net
Message-ID: <450eo1$1gj@cnj.digex.net>
Source record: 237425

For anyone interested, I have put up a ham radio web page at:

http://cnj.digex.net/~jimh/ham.html

It features a QSL I designed, a downloadable FLI animation of a "Flight through a transmitting tube" (the animation
player is also a downloadable Windows program), photos of my rigs in various times and QTHs during my life and some
chatter on my building of my 813 rig.

In addition is a link to my broadcast radio pages and a few, but important links to other ham pages.

My home page is:

http://cnj.digex.net/~jimh/

if you want to see other stuff.

Aub Topp: progress report

Progress Report on Aub Topp

Aub, unfortunately, took a turn for the worse last Tuesday and was taken back to hospital. However the situation has stabilised and he is looking much better. He is now in "D" unit at Westmead and can have visitors. Ask at the main desk for the ward number. They hope to either move him to a nursing home or take him back home towards the end of next week for him to convalesce.

Affiliated clubs questionnaire

Affiliated Club questionnaire

By now all, known, ,affiliated clubs in the NSW Division of the WIA, should have received a letter and a questionnaire.

The response has been quite encouraging, however, a number of Clubs have not yet returned the questionnaire in the reply-paid envelope provided.

In order to provide the best possible servuice to ALL affiliated Clubs we need to have our new database updated. Please answer ALL questions.

Some responses, so far, included letters with comments and suggestions, these have ben noted and will be replied to in due course.

When all information has been received and collated the Division will be in aposition to deliver all of the benefits long due to Affiliated Clubs. Let me assure you once again that this exercise is only the beginning of an overdue program for Affiliated Clubvs, particularly those in the country.

If there is any club which has not received their letter and questionnaire please contact me as soon as possible.

Repeater site survey

Repeater site survey

Next Sunday, Morton Williams VK2DEX and Peter O'Connell VK2EMU will be undertaking a site survey for a proposed WICEN VHF and/or UHF repeater in the Putty area. Next Sunday's survey is from Mount Kindarun, about 20 Kilometres north west of Putty and 100 kilometres west of Newcastle. They will be operating on both 2 metres and 70 centimetres ansd seeking contacts from amateurs from Sydney, newcastle, the Hunter Valley and surrounding country areas.

Time: From after the morning broadcast until 12:00 noon.

Frequencies: 2 metres 147.500 MHz simplex.
70 centimetres 438.800 MHz simplex.

Callsigns: VK2DEX and VK2EMU

That is NEXT SUNDAY.

73 de Peter VK2EMU

JOTA operators needed

J.O.T.A. operators needed.

Two or more amateur operators, especially fullcalls, are required to assist in running a JOTA shack at 1st Marsfield Scout Hall (near Macquarie University). All operators will be well fed and watered, and overnight accommodation will be available if required.

Please help this good cause.

Sean Durkin, VK2TUX
Group Leader
1st Marsfield Scout group
Phones: H: 809.2456 W: 807.0437

WICEN news

WICEN News

The Central Coast Amateur Radio Club is holding a lecture on electrical safety, by Dick Maitland VK2BBK. He will be explaining the latest regulations, and discussing safe electrical practices for the shack, WICEN and outside locations. This lecture will be conducted in the CCARC clubrooms, Dandaloo St, Kariong, starting at 8pm (no date provided). Please direct all enquiries to John Pogson VK2DBC.

The Hunter region is running a Training Camp for all interested parties on the weekend of 7-8th October, at Crangan Bay YMCA Hostel, Lake Macquarie. A location map will be sent to course participants (which could well be your first exercise). The cost is $42, and it includes accommodation and meals. Bring sleeping bag and pillow etc, overalls and stout footwear (no joggers) for Sunday field exercise, radios for 80m through to 70 cm (if you have them) with antennas, compass, pen and paper etc. There will be lectures on map reading, critical incident stress, safety standards in power supplies and generators, and equipment needs. Sunday will be a field exercise incorporating map reading and message handling on multiple nets. As places are limited, get in early and reserve your place now, by contacting Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW.

There are several events next month, apart from the Training Camp. On the same weekend as the Training Camp is the VRA AGM, to be held in Sydney, presided over by Ray VK2BRF, the VRA President. The next weekend is the Hawkesbury Canoe Classic, commanded as usual by Kevin VK2CKD; Kevin advises that packet radio, hopefully TCP/IP, will be used in this event. There will be an "Introduction to Emergency Management" course on the weekend of 14-15th October, the same weekend as Hawkesbury. Positions on the course are available for WICEN members, and we thoroughly recommend this course; this information comes to us from Barry VK2AAB. Finally, if that wasn't enough for you, there is JOTA on the weekend afterwards (21st-22nd October); this year the moon has been kind to us, and it does not conflict with Hawkesbury, so there is no excuse for not helping out with future Amateur radio operators and WICEN members.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB. Please note that the VK2AAB system is no longer operating as a BBS.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

News Briefs

Mobile phones to be banned at Olympic Village site

The Sydney Morning Herald reported this week that mobile phones are to be banned from the Olympic Village construction site at Homebush Bay.

The reason, which may be of interest to Amateurs operating mobile in the area, is that the Department of defence is concerned that electromagnetic energy from the phones could have (quote) "unforeseen consequences" when they are used near the ammunition

and weapons guidance systems stored in the area by the DoD.

The report said that the southern third of the Olympic village site has been declared free of old unexploded ordnance, but "areas of risk have been identified in the northern section of the site."

The explosives will be removed from the area just prior the Games in the year 2000, so WICEN operators need not be concerned when providing communications assistance during the games.

IPS report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(15 SEPTEMBER - 21 SEPTEMBER)

Club news: Kempsey

Kempsey and District Amateur Radio Club

A Trash and Treasure and Barbecue will be held on the October Labour day weekend.

Actually, Saturday 30th September is the day.

Proceedings will commence at 8.00 am.

Food and drink available at moderate prices.

A running raffle with many good prizes will be conducted throughout the day.

Large trestle tables will be available and a $5.00 trader's fee will apply.

The entry fee of $2.00 will include a complimentary "cuppa" and a lucky door prize raffle ticket.

For further information call Mark VK2XFK on the following two metre repeaters:

VK2RGL - Great Lakes - 147.375 MHz
VK2RPM - Port Macquatie - 146.700 MHz
VK2REE - Taree - 146.675 MHz (new repeater)
VK2RCH - FCoffs Harbour - 146.650 MHz
VK2RMC - Kempsey - 146.875 MHz
or 146.500 MHz simplex

The place - Guides Hall, Verge St, Kempsey

The date 30th september

The reason - to get all available amateurs together for a bit of fun, to trade a bit of gear, and to swap a few tall stories.

73 Mark VK2XFK, Socila Secretary. KADARC

Club news: QRP Club

QRP CW Weekend June 1995

The CW Operatrs' QRP Club would like to thank all operators who took part in the CW QRP Contest on the weekend of 17th/18th June this year. We were pleased with the results and also very happy that several stations took the time to put suggestions for future events. These are certainly being looked at by the Committee.

RESULTS

1st VK2FKE Bill 367 points
2nd VK7LF Tom 220 points
3rd VK2CW Greg 124 points
4th VK2BO Jim 93 points
5th VK4RE Roy 62 points
-6th VK2WES Wes 55 points
VK2RJ Les 55 points
8th VK3BYD Warren 46 points
9th VK3AAM Phil 45 points
10th VK1PK Peter 26 points

Whilst all these stations did operate QRP, we remind all CW operatrs that the Club welcomes all participants in this annual event and the monthly Scrambles, usually on 80 metres about the third Thursday of each month. Please come up and join in.

With thanks and good CWing,
73, Ian VK3DID
Awards & Contests Manager
CW Operators' QRP Club

Club news: Blue Mts.

The Blue Mountains Amareur Radio Club invites all listeners to our October meeting. Our guest speaker, Noel Hill, VK2JG, is going to talk about Amateur Radio in the 1940s and 50s, the birth of VK1, and his days as Chief Engineer at TCN-9. Noel might even say a word or two about the ultimate mode.

The meeting will be held at the club room on Friday, 6th October, 1995 at 8.00pm Springwood High School, corner Grose Road and Chapman Parade Faulconbridge; enter from Chapman Parade.

The renowned scones and cuppa will be available for supper.

All are welcome.

Thank you
Alex, VK2ICL
Publicity Officer

A public domain logging program is available for the PA Party.
It was written by KM3D, Harry Bump. It is a UUENCODED ZIP file, approx
125kb long. When unpacked, it will even run on an XT with only a floppy disk,
but not very quickly. :)

I do not have FTP. Email is the only way I can distribute this, and
I have set up an email based file server to do it.
To recieve a copy, do not reply to this message or send mail to me!
Send the following message to "pa-fs@nad.com":

send pa1200b
quit

The resulting file will be emailed to you within a day.
You will need to run UUDECODE and UNZIP to unpack this file. I cannot supply
these tools for you, but they are readily available.

Let me know if there are any problems with the file server. This is my 1st
try at this.

Have fun, and see you from Potter Co. during the QSO party!

244. Callsign lookups

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-05 00:00:00 UTC
From: stocker@apollo.hp.com
Message-ID: <DFzGov.9CK@apollo.hp.com>
Source record: 237428

In August I was given instructions on how to telnet to a system and lookup callsigns. The system was/is located at the Univ. of Arkansas @ Little Rock. (144.167.10.128) The system worked GREAT! I would look up callsigns for a few people that use the local repeater, so they could send out QSL cards.

Well, I went to lookup more calls, and the system won't allow anonymous login. Being the curious kinda guy that I am, I thought someone might be able to tell me what happened to the system? While I'm asking questions, is there another site, www page, etc... that I could do callsign lookups? Some of the www pages that I've been to, say they're under construction or I get errors trying to access the home pages.

Any help would be appreciated, since I have a couple of friends that will be taking their novice exams soon, and I want to be able to tell them their callsigns asap!

Thanks again for any help :-)

Source record: 237431

Greetings,

I'm a newcomer to all of this but I did want to put my $0.02 in on this.

Code requirements are necessary depending on what aspect one veiws this hobby.

For a person who is a ham because of their love for gadgets, code doesn't seem important unless it interferes with their ability to obtain their desired gadgets. For someone who is into ham for its social aspects... people who see ham radio as a fraternity, code is a rite of passage.

Does knowing code keep out riff-raff as I've heard? Only if learning code changes something intrinsic to an individuals nature. I can think of several nasty individuals who would have the intellegence to master 5wpm. No, I'm afraid that whatever the value of code is, it does not build character.

Why then should we keep code? Why for tradition, of course! What's wrong with traditions? What's wrong with saying to a new ham "Yeah, I remember when I was learning code, keep plugging though, if I could do it so can you." This is not to say "If I had to do it so do you... no easy rides." Believe me, I'm a no-code tech, but I've also been an electronics technician (radar) and have been a very active computer hobbiest for many years and I'm certainly not "riff-raff." There is a place for no-code techs in the heirarchy.

My vote is that code should stay. If it is a deterent to reaching the level you want to be than bite the bullet and learn it. There are too few traditions left.

To all radio amateurs

SB DX ARL ARLD052
ARLD052 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, The DX News Letter, QRZ DX, The 599 DX Report, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from QST. Thanks to all.

SABLE ISLAND, CY0. CY0TP is active with ops Wayne, VE1CBK, Ken, VE1RU, Don, VE1AOE and Gary, VE1RGB. They are expected to be active until October 10. QSL all 6 meter, VHF, UHF, Satellite and EME contacts to Don Roland, VE1AOE, PO Box 1257, Truro, Nova Scotia, Canada B2N 5N2. HF QSLs, including SSB, CW, RTTY and other digital modes, go to Wayne King, VE1CBK, 63 Brook Street, Lake Fletcher, Nova Scotia, Canada B2T 1A5. All Japan and Korean HF QSLs go to, Zorro Miyazawa, JH1AJT, Box 8, Asahi, Yokohama 241, Japan.

VIETNAM, 3W. Franz, DF5GF, has been reported active on 14296 kHz. QSL to Franz Rebholz, Viet Duc Pedagogical University of Technology, 01 Vo Van Ngan St, Thu Duc, Ho Chi Minh City, Vietnam.

LIBYA, 5A. The 5A0A operation has been cancelled. SP6RT and SP6AZT were in Benghazi but had to cancel their planned activity as 5A0A because of the political situation in Libya. They are now back in Poland.

JAN MAYEN, JX. Marit, LA4CJA, and Terje, LA3EX, will be active as JX4CJA and JX3EX on 80 through 10 meters, from now until April 15, 1996.

GREENLAND, OX. Mako, JA1OEM, plans to be active as OX/JA1OEM until October 16. Look for his CW on 3508, 7008, 10108, 14008, 18113 and 21008 kHz. For SSB check 3754/3795, 7058, 14130, 18113 and 21180 kHz.

SAO TOME, S9. Look for Gamito, S92VG, his evenings on 15 and 20 meter CW. QSL to PO Box 173, Sao Tome City, Sao Tome.

EASTERN KIRIBATI, T32. Lothar, DJ4ZB, is currently active as T32ZB. He has been heard on 3799 kHz around 1030z and 0230z. Check 14192 to 14220 kHz between 0100 and 0230z and 18145 kHz before 0100z. QSL to his callbook address.

FAROE ISLANDS, OY. Ben, OZ5AAH will be active as OY/OZ5IPA, from November 1 to 6. QSL via his home call.

SWITZERLAND, ITU. TM5ITU is being operated by the CERN Amateur Radio Club during the TELECOM 95 exhibition in Geneva. QSL to F6IMS.

ISRAEL, 4X. Riki, 4X4NJ, will be active daily at his sunrise on 160 meters. Look for him on 1827 kHz. QSL via WA4WTG, R. Kaplan, 718 SE Third Lane, Dania, FL 33004.

VP5, TURKS AND CAICOS. VP5T will be on the air during the CQWW DX Phone Contest October 27 to 30. Operators will be KE2OP, N2VW and WB2YOF. Each operator will be on the air before and after the contest from October 24 to 31, using VP5/ his home call. Emphasis will be on CW and the WARC bands. All QSLs for VP5/ home call go to the op's home call address. QSL VP5T for this operation only to N2VW via the ARRL W2 bureau or direct to his callbook address with SASE or SAE and postage.

Labrador, CQ Zone 2. AH9B, KG4DX (KD0XK), N0AFW and WA0PUJ will operate in the CQWW SSB Contest from Zone 2, located in Labrador City, Labrador. They will sign VO2WL and enter the contest as a Multi/Single. They will operate before and after the contest between October 25 and 30 using VO2/ home call on mostly the low bands. QSL via WA0PUJ.

Grenadines, IOTA NA-147. After the J3A CQWW SSB Contest operation, K9AJ, W9IXX, and KA9RHK will operate from Carriacou Island on CW, SSB and RTTY, signing J3J, J3X and J3Y, respectively, from October 30 to November 3. They will pay special attention to the IOTA frequencies. Note that the above J3 calls may be used from Grenada for testing prior to the contest, but they will be on NA-147 only during the above dates. QSLs for all three calls go to K9AJ.

Prefix Update. The T8 prefix has been assigned to the Republic of Pelau, which had been using the KC6 prefix. T8 has never been assigned to Seborga.

Special Event Station. HK100GM celebrates 100 years of radio communication through the end of the year. QSL via Rojas M. Edilberto, HK3DDD, PO Box 25827, Bogota, Colombia.

THIS WEEKEND ON THE RADIO. The ARRL International EME Competition starts on October 7 UTC and runs for a complete 48 hours. Details are in September QST on page 124. The phone portion of the

VK/ZL/Oceania Contest, sponsored by the Wireless Institute of Australia, runs from 1000z October 7 to 1000z October 8. See October QST, page 127 for more details.

>
> -Drew in Charlotte-
> KF4DDM

What a moron. The jury acquitted him because the prosecution failed to make their case. And how did they manage that with a "mountain of evidence"? Simple, all it takes for an acquittal is a reasonable doubt. The dream team had the help of the Los Angeles Police Dept.

Apparently someone didn't trust the court system and just *had* to assist with the evidence. Of course, having Mark Fuhrman perjur himself certainly made everything the police said 100% reliable.

"Helping" the court is a daily occurance out here. The judge and the lawyers are the "enemy". Of course, when the victim, eh ah defendant, is poor and and being defended by a public defender, nobody gives a rats ass.

The real problem out here is that the police are in the siege mentality mode. *They* are the only pure of heart, and *every* one else are the criminals.

OJ Simpson did not kill them. The court sez so. Period. You don't have to like the verdict, but the verdict stands. He is innocent. (And I might add, that the criminal justice system around here said that he was innocent until proven guilty.) So he was *always* innocent. Having never been *proven* guilty.

Ex-Chief Gates left a real bucket of shit behind for Chief Williams. And to top it off, he had the gall to state that he could fix the entire LA police department in 6 months and re-retire.

Note: to the majority of police officers out there reading this and getting ready to rip my head off. I know that most of you have your shit together

and do you best. It's just that there are too damn many clowns and cowboys
out here making it difficult for the rest to do their job.

ObRadioRelated: At least we won't have to argue wether or not OJ as an
ex-felon would qualify for a license.

In the Air Force, a person not in uniform that walks around with a HT in their hand may be considered by some as a high ranking officer because they normally carry similar radios with them. It was kinda fun using my HT to get that effect...if you're asking for someone/thing, "point" with the antenna, they may say "yes sir" if they don't recognize you. I played along sometimes.

John,
Try hitting the Mt. Beacon repeater in Beacon N.Y. We're about 70
miles north with GREAT coverage! 146.970 (-)
You might want to try a pl of 100 but it's not needed. We tell folks it
helps to open up the machine a little better if they can't seem to hold
it. We're the Mt. Beacon Amateur Radio club. Talk to folks in the city
ALL the time!

Tom - KB2SMS

I rather like the idea of opening up the HF bands to licensees with
little or no CW ability. Eventually, they'll notice that the digital
modes have all this bandwidth available, get on one or more digital modes,
find out how bad current amateur technology is, and some of them will
just plug along, some will give up, and some will do something about
it. Likes like a recipe for innovative work and/or adaptation of
innovative work.

BTW, some of those who plug along will be those who try CW and decide
they like it for whatever reason. Good for them.

There is a problem with this in places where the split between voice
and digital modes in voluntary. Pressure on the bandplan would likely
result in voice spreading all over the bands. This might help with
that innovation in digital modes, but it would be a mess.

258. Old QSL card review

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-06 00:00:00 UTC
From: jangus@skyld.grendel.com
Message-ID: <812945016snx@skyld.grendel.com>
Source record: 237303

I pulled out a stack of QSL cards from when I was a novice, WN6FWI. Just for laughs I processed the stack through the QRZ! CD-ROM Callbook server.

Out of the 78 or so cards, 50 people still have Amateur Licenses. Most of them having gone from a WN call to a WA/WB callsign. Many are Extra Class now.

Most of the 1x3 callsigns that are no longer active I suspect are SK sadly.

Everyone of these people qualify for QCWA now. Heh heh. Most of the cards are dated 1970 or so.

Surprisingly enough a LOT of them are still at the same address.

73 es GE from jeff

Now there was something truely worth a .misc category posting!

261. J pole antenna using coax instead of twinlead for its stub

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-06 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseDG0F0v.5t4@netcom.com>
Source record: 237306
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

(Feel free to distribute this on Packet, use BID 50_JPOLE)
(also onto BBS's, CD's and etc.)

A J POLE ANTENNA USING COAX FOR THE STUB

Instead of 300 ohm twinlead.

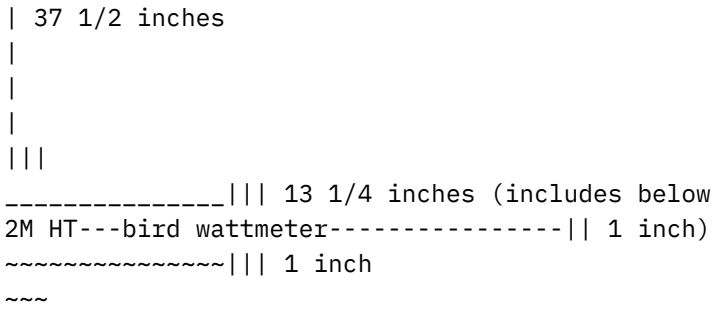
Decided to try using a piece of RG58 coax in place of the usual
300 ohm TV twinlead. They're both transmission lines. So, a
quarter wave length of eighter should work (factor in velocity
factor in measuring out a quarter wave length, twinlead is 0.88
and RG58 poly is 0.66). And the coax is unbalanced, so no
theoritical need for a choke balun (ferrite beads or many turn
coil). The coax shield is at RF ground potential, the RF is
on the center conductor, and the open end of the quarter wave
stub center conductor connects to the end of the half wave
dipole. The tap is formed by "T" connecting the stub coax
to the coax feedline from the radio.

Take some RG58, short shield to center conductor.
Measure 13 1/4 inches from the short, remove the outside jacket
and shield at this point and beyond. Leave an inch or 2 of
center conductor sticking out.

Measure 1 inch from the short, and prepare to do a "T" connection
here. Create a hole in the outer shield about 1/3 inch long
and peel it about half way round the coax. Then take a razor blade
and remove enough insulation from the center conductor to bare a
small spot. Enough to do a tack solder connection, which connects
to the center conductor of the feedline coax. And shield to
shield. Take care to get a good connection without shorts.
Take your time here. One probably could just use a BNC T connector
here, and make a short shorted cable for one side, and a longer
cable to feed the dipole on the other. Just keep the overall
lengths right.

Now connect a length of wire to the center conductor sticking out
the open end of the stub, enough so the length of the wire and
the amount of center conductor protruding beyond the end of the
coax shield totals 37 1/2 inches. This is the dipole part.

ASCII attempted diagram: |
|
|
|



13 1/4 inches (includes below
1 inch)
1 inch

Used a 2 meter HT and a Bird wattmeter to measure forward and reflected power, indirectly SWR. My forward power was ten times reflected power, not bad. At one point, I had a bad T connection (bad solder joint) that caused the forward power to almost equal reflected power. Fixed that, and now it works like the twinlead Jpoles. Ran my hand along the feedline coax, and the stub, no effect on reflected power. Did get reflected power if I get near the dipole part, as expected.

And I could hit repeaters pretty well, considering I was in the basement.

262. Hams at Alberqueque Balloon Fest?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-06 00:00:00 UTC
From: herbr@netcom.com
Message-ID: <herbrDG0FJJ.KCz@netcom.com>
Source record: 237307

I am going to the Alberquerque Balloon Festival on Friday - Sunday
October 13-14, 1995.

I am interested in hooking up with other hams that might be going out
there too. I am particularly interested in knowing if anyone will be
doing ATV from a balloon that we might be able to tune in.

Thanks and 73's.

OJ cannot be a ham because he is not old, fat and white.
OJ is a free man because of the distinct possibilty that Furman et al
contaminated evidence not because he is black. That does not mean Mr
Simpson did or did not commit the two homocides.
Burt's comment seems to confirm that in many cases there are two i's
in bigot, one on each side of the nose.

OJ was found to be black by the jury. The jury look at themselves and saw most of them were black, they went no further. Black women hate it when a black man marries a white so to them is was justfiable homicide.

I saw a brochure from an outfit that made such units. They required
a "normal" FM rig, or, for greater ease in operation, one with a
squelch output to tell when a carrier is on freq. Every now and
then I post asking the whereabouts of the company.

In theory, you get your old ICOM 22s or 2AT and a good antenna, leave
it on split, and own your own phone patch unit. The stuff was 100%
legal and FCC type accepted.

Without addressing Mr. Simpson's case, the above truism is simply not correct. While someone who is accused of a crime does enjoy a presumption of innocence, the suggestion that they are indeed innocent leads to the preposterous conclusion that only innocent people are convicted.

A jury finding of not-guilty only states that the presumption remains. A search for truth would be an excercise which was very different from a trial of legal guilt and would not have need for exclusionary rules.

I suspect that the software is supposed to be used with
the KR-500 or KR-5400 rotator systems. These were marketed
by Kenpro here in the US until recently. Now they are
marketed by Yaesu. They're still the same good rotator
systems, they just cost more now. :-(

: Learn how to spell what you want to be.

Great. Burt posts the Amateur Code one day (you know, helpful,
courteous,etc.) then posts this and the other "smart" answer to the
young lady asking what a ham is. Unbelievable.

The real answer, of course, is to check your local library for a copy
of "Now You're Talking" by the ARRL. They also carry this or similar
publications at Radio Shack. You might also talk to a local ham and
find out about local clubs. Email me direct if you have no luck
finding info and I'll send you some.

And please don't judge amateur radio by Burt's response. There are
all kinds in every endeavor...unfortunately.

Hold it. The original stipulation was for "binary signal." You
are describing something else.

Tapping on a table would work with the original (American) Morse
code. Not with what hams are currently beeping on the air.

>
>What do you gain by putting it on 6 meters? Why not just use it
>on 49 MHz?
>
Frequency congestion. Have you listened to the 49Mhz baby monitor
frequencys in any city? The frequencys are crouded.
Second, Since the balloon launches are amateur related we try and keep
them in a amateur band.
Third, It provides another transmitter for the foxhunters to track if other
transmitters fail, you dont want to try and df something in the 49Mhz band
due to multiple transmitters.
Fourth, Cost is definatly a factor, transmitter with crystal cost are around
the $50 range making it a economical thing to place on a balloon.
Fifth, If you have ever heard one of these 49 Mhz units on a balloon the

reason is justified. 50 to 80mw will travel line of site on these balloons and with some of them getting to 100,000 feet and above it gives you a 400 + mile range on 6 meters. We have been getting regular contacts via 6 meters with full quieting out in the 250-300 mile range every time one of these units is put up.
Even without a balloon my own personal experiences with these transmitter connected to a decent 6 meter antenna (mine is mounted at 70 feet) will get you 5 miles no problem from base to mobile, possibly more if there was another user on 6 between 6 to 10 miles away that I could experiment with.

For those who feel that 50mw is not enough power, Ramsey makes a amplifier (LPA-1) that will take it up to at least 250mw and you could then modify a PA-10 (I believe) to give you more or you can roll your own amp.

> Steve KA6S

I can't personally comment on the Mark4CR, but I can offer you information about other repeater controllers. I work for Link Communications, the company that bought part of Advanced Computer Controls when they went out of business a few months ago. We have controllers that don't have the limitations described above. For example, we can automatically turn a link on or off at any given time of the day, week, month, etc. Our controllers are specially designed for linking. Because of this we have a different hardware structure than any other controller manufacturer that I know of. Specifically, we have a full audio crosspoint, allowing any radios connected to our controller to be "connected" to each other without interfering with the rest of the system. It also allows us to

run multiple repeaters, independently or connected, on the same controller. If you want more than basic repeater features, you might be better off buying your RF and controller separately. If you would like more infomation, send me your fax number or mailing address.

Sincerely,

Steve Strobel

>That's today Ham-Radio ...

Speak for yourself...!
Some of us are quite actively building and enjoying our own radios.

One guy who works at another of my company's plants is scratch-building a high performance 6 meter station. A couple of the folks at my plant are into microwaves, and have built some of the 10 GHz transverter kits that are out there.

Me, I'm nearing completion of a scratch-built superhet 40m receiver, and am about to start on the companion transmitter. I'm later going to build a wide-band linear to boost any HF signal up to 25 watts minimum, for when I want QRO! I'm also considering converters to add other bands to my receiver.

BTW, I've never had a 5-second contest-style exchange on HF. I (and my wife, she's a ham, too) did work Field Day on 2 meter SSB.

>compared to ICOM and Motorola radios. I don't have another brand ht's so I
>won't comment on their relative quality.

If you say so.
However, I live two miles from a big commercial/public service site. I'd be able to see it out the front door if it wasn't for the trees. The HTX202 receives weak signals among the pager trash, while my Icom IC2-AT, reputed to be one of the best performing/most rugged radios they made, gets totally stomped and goes deaf as a post. At hamfests, the Icom is useless. So much adjacent channel crud that the desired signal is totally covered. I'll be checking the HTX202 in this environment tomorrow, weather permitting!
YMMV, as they say.

Question:
My friends FT-530 clears its memory on occation. It seems to happen as soon as the radio is powered up. Example: Radio was off with correct ime in the display. When turned on all memories were cleared and frequencies reset. When the unit was then turned off time now read 00:00. This leads me to believe it happened on power up. The back-up battery checks out at 3 volts and when the above happened the main battery was fully charged. Thanks for any help.

In Alberta, cops must calibrate the radar before they use the machine each time. The calibration records must be presented in court if a driver fights the ticket. I invited an RCMP officer to my physics class, and the students had fun setting up a "speed trap" in front of our school. The fastest driver we recorded was a cement truck, at 65 km/h in a 50 km/h zone. A very educational trip: radar, simple harmonic motion, and Newton's Laws of Motion all in one hour...

Right on Greg and I might add, in many areas of Canada and the US the Red Cross Emergency Communications IS provided by Hams! Granted, emergency communications can be handled by wireless systems such as cellular BUT in many disasters the cell sites are damaged, jammed with callers or on batteries...which have long since died. In many cases Hams provide one of the few remaining means of communications that remains functional. Hams also provide essential communications between emergency shelters or other "non front line" sites. Here in British Columbia Canada, Ham Radio provides the backbone of our Emergency Preparedness System. To say that RACES is a waste of time shows the original poster is rather ignorant of the facts.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 OCTOBER AND FORECAST FOR 07 OCTOBER - 09 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 05 Oct
Daily Proton Fluence >1 MeV: 4.1E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 8.7E+08 (high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Oct 08 Oct 09 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Oct: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 05 Oct
Learmonth 16 2334 4332
Fredericksburg 20 19
Planetary 20 26

Observed Kp for 05 Oct: 4445 5224
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Oct 20 Unsettled to active
08 Oct 20 Unsettled to active
09 Oct 20 Unsettled to active
COMMENT: IPS Geomagnetic Warning 25 was issued on 5 October and is
current for interval 8-12 October.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
06 Oct normal normal fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Oct normal fair poor
08 Oct normal fair poor
09 Oct normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
06 Oct -7

Observed Australian Regional MUFs:
Darwin MUFs were near predicted monthly values to depressed 30%.
Townsville MUFs were 30% depressed to near predicted monthly values.
Sydney MUFs were about 15% depressed.
Hobart MUFs were depressed 15-30%.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
07 Oct 0 Near normal to 15% depressed
08 Oct 0 Near normal to 15% depressed
09 Oct 5 Near normal to 15% depressed

From: Bart Jahnke <bjahnke@arrl.org>
Subject: Contact info for VECs in the Amateur Radio Service
Date: 6 Oct 1995 16:31:49 GMT
Organization: American Radio Relay League - VEC
Message-ID: <453lll$ise@mgate.arrl.org>

The FCC has just distributed (to VECs) an updated list of current VECs in the Amateur Service. The list has been shortened from 18 VECs down to 16 VECs. The two VECs leaving the service were the Charlotte (NC) VEC and the Great Lakes (IL) VEC (formerly known as the DeVry VEC).

There are presently 16 Volunteer Examiner Coordinators (VECs) in the Amateur Service who coordinate examinations for Amateur Radio licenses. Their contact information (as of August 1995) follows:

Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1995 test fee is $5.90.

Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;

314. ICOM W2A Wideband RX MOD?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-06 00:00:00 UTC
From: myoung@UMDNJ.edu
Message-ID: <myoung-0510952209570001@rwj-ts-slip11.umdnj.edu>
Source record: 237359

I have lost the wideband receive mod for my ICOM W2A. It is a simple keyboard sequence that worked for years until the battery went dead dead and the radio became entirely reset (all programming information lost) including the wideband RX capability. If you know the mod (or where I can get it) please post it or E-mail it to me at myoung@umdnj.edu

Thanks
Mark

315. Best Radio

Subject: Best Radio

>>...what is the recommended radio for someone starting out...

You're right - we're too opinionated to provide answers for you.

The absolute BEST radio for you is...the one that will hit your local repeaters, and contact those that you want to connect with.

Too simplistic an answer? Yeah. But the best thing you can do for yourself is JOIN your local Amateur Radio Club, and ask THEM for equipment recommendations. I'll bet a Member will have a unit for you to borrow for a while.

Just don't eliminate the products from STANDARD when you purchase...<g>.

Subject: Re: Mods for Radio Shack Tranceivers

>>The HTX-202 is based on the ICOM 02AT with certain design
>>modifications : based on Tandy's specs.

->This is an "urban legend". Icom had nothing to do with th htx-202. The
->ICOM story was invented by R/S salespeople to sell more 202's.

Is it just a coincidence that the Icom battery design is the same for
both units? Wouldn't Icom be a little irritated if their battery design
was ripped off by a competitor?

->IMHO the htx-202 is a good value for the money, but it is poorly made
->compared to ICOM and Motorola radios.

And between 1/2 and 1/10 the cost, too.

->I have 2 htx-202's and both have been in the shop twice.

I also have two HTX-202s, and neither has required any service work. Of
course, only ONE of them is operating 24 hours/daily - continuously for
months - on packet.

You claim to be a "consultant" of some type. As such, I wish more
homeowrk would be performed before "consulting" us as to the specifics
of the HTX-202. The vast majority of HTX-202 owners are quite pleased
with the excellent performance of their units.

From: ej.johnson@digcir.cts.com
Message-ID: <9510061616241497@digcir.cts.com>
Source record: 237364

BS<>In August I was given instructions on how to telnet to a system and
BS<>lookup callsigns. The system was/is located at the Univ. of Arkansas @
BS<>Little Rock. (144.167.10.128) The system worked GREAT! I would look up
BS<>callsigns for a few people that use the local repeater, so they could
BS<>send out QSL cards.

BS<>Well, I went to lookup more calls, and the system won't allow anonymous
BS<>login. Being the curious kinda guy that I am, I thought someone might be
BS<>able to tell me what happened to the system? While I'm asking questions,
BS<>is there another site, www page, etc... that I could do callsign lookups?
BS<>Some of the www pages that I've been to, say they're under construction
BS<>or I get errors trying to access the home pages.

BS<>Any help would be appreciated, since I have a couple of friends that will
BS<>be taking their novice exams soon, and I want to be able to tell them
BS<>their callsigns asap!

BS<>Thanks again for any help :-)
Bruce, try the QRZ www page (I don't have the address handy) but if you
do a search type QRZ and you will find it! you can also add you
e-mail address to your callsign data and they will include it
in the next ver. of the QRZ Cd

73,
EJ!

Hi. I think you're confusing ham radio with shortwave broadcasters like
Voice of America (ham's talk person-to-person and generally aren't
allowed to broadcast).

Try the rec.radio.shortwave newsgroup. Also, if your friend won't have
www access in China, he should bring along a copy of the "Passport Guide
to World Band Radio", which lists broadcasts by frequency, language,
country of origin, time, etc. It's great.

You're just using the "duration" bit (1 vs. 3) to produce a "tone"
difference instead. It's still binary (either one or the other,
nothing in between).

: DX, what will I need? What kind of stuff is on 6m? I I have a RTTY
: machine, can I use this on 6m? Any info is appreciated. Thanks.

You can do CW, SSB, FM, RTTY, digital, etc. 6m DX is a lot of
fun. When the ban opens you can work cross country with 50 watts
and a deent antenna. I run a Kenwood TS-690 with a 5 element cushcraft
beam up about 30 feet and I've worked (from NJ) CA, TX, and over 20 other
states with just sporadic chances (time, not sporadic E) to operate because
of my schedule.

: Nate Gingras, KB9??? (My test is tomorrow)

Good luck.

Richard Lubash (nema@pcnet.com) wrote:
: Can anyone suggest sources of mac ham related software (log, controal
: etc.) seems most software is pc based. Interested in free, shareware &
: commercial.
: Thanks,

Well ..... for Contest Logging software .... I just LOVE the program
MARATHON for Macintosh written by Kevin Krueger, N0IOS. It supports
lots and lots of contests, has a "generic" contest log which in a
pinch can be used as a general purpose log, and is very intuitive.

You can probably reach Kevin via internet at:

krueg010@maroon.tc.umn.edu

Kevin has also written some of the host mode control software for
two of the largest TNC manufacturers. Now, if we can just get
him to make some more progress on a stand-alone general purpose
logging program I'll be happy. :-)

BTW, I have no commercial interests in Kevin's programs ... BUT
I am an unabashed and very enthusiastic supporter of Kevin's
since he his one of the very few who writes commercial quality
software for the Mac. More success by Kevin means more and better
s/w for all of us. :-) I am also pleased to see that WD1V
provides a large quantity of Mac s/w. He's got the largest
collection of s/w around.

Message-ID: <4567pgkjc1@mhafc.production.compuserve.com>
Source record: 237237

I bought a Kenwood TS-60, which at this point is by far my most modern and luxurious rig. I enjoy using it very much on VHF contests and occasional ragchews, with typical contest results ranging north into the Seattle and north-of-the-border area and east as far as Texas from my Los Angeles area QTH. My 11-amp power supply holds me down to half of the TS-60's full power output, and my antenna is a 50-1300 MHz log periodic up 26 feet, so I could easily boost my signal by at least a full S unit with a 25-amp supply and a higher-gain Yagi for 6.

Had I not already owned an adequate HF rig, I would certainly have considered an HF-plus-6 rig which gives a lot more overall for the money. In my case, though, getting HF for "only" a few hundred dollars more was not a persuasive argument since I already had HF capability.

Six is a friendly band with interesting propagation that will only improve for the next several years. I hope you find something you like and enjoy it as much as I have in the five months I've been on.

Warren,
Please forgive me if I nitpick, but some hams, myself included, disdain
kerchunking. Technically it's a transmission without identification. A
simple 'insert your call here Testing' is usually preferred.

I think you'll find that it is 1/12 degree longitude and 1/24 degree of latitude
unless my math is screwed up. The handbook gives it as 5' of longitude
and 2.5' of latitude.

334. GB2RS News 8th October 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-07 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <813107040snx@llondel.demon.co.uk>
Source record: 237245
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 8th of October and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The Society's 1994 - 95 Accounts are in final form and were approved by Council on the 7th of October. They will be circulated to Members in the November edition of RadCom. However, we thought that members would appreciate a few highlights. In summary, the Society's financial and trading position is currently sound, and the outcome for the financial year 1994 - 95 was positive and in line with expectations.

The Society achieved a small operating surplus of 19,391 pounds on a turnover of 1.6 million pounds, which is in line with the objective of achieving a roughly break-even position. The Society's day-to-day operations generated cash of approximately 47,000 pounds in the year.

Total income was about the same as in the previous financial year and there were modest increases in both subscriptions and book sales. However, advertising income fell by about 10 per cent, reflecting the present difficulties in the amateur radio trade. This fall was smaller than anticipated.

Operating expenses were held to approximately the same level as last year. Capital expenditure during the year amounted to some 78,000 pounds, most of which related to the installation of new technology at HQ, a project which has been successfully completed.

A valuation of Society's Headquarters building has resulted in a writeback of the previous Revaluation Reserve and a provision of 83,819 pounds against the original cost. This reflects the significant decline in industrial property values over the last few years. The reduced value has no impact on the Society's trading position or cash balances and will not directly affect subscription levels.

At the 30th of June, the Society had net assets of 707,018 pounds, which included cash balances of 285,258 pounds.

The Leicester Amateur Radio Exhibition will take place on Friday and Saturday the 20th and 21st of October. All the major amateur radio companies will be in attendance, there will be an RSGB book stall and membership information stand, and Morse tests will be available on demand. A 12-page pull-out guide to the Leicester show was published in the October RadCom, or for further information you may call Frank, G4PDZ, on 0116 287 1086.

RSGB Headquarters in Potters Bar are usually open on the third Saturday of each month. However, this month - so as not to clash with the Leicester show - HQ will be open next Saturday, the 14th of October, between 10.00 am and 4.00 pm. The bookshop, museum and library will be available to visitors and GB3RS will be on the air to celebrate World Amateur Radio Day. Morse tests are also available on demand between 11.00 am and 12.30 pm. Don't forget to bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at RSGB Headquarters.

A new EMC Co-ordinator has been appointed in South Wales. He is Mr W Holt, GW0SGG, whose address is 14 Heather Cres, Sketty, Swansea, West Glamorgan, SA2 8HE. His telephone number is 01792 299510.

The Martlesham Radio Society's Microwave Round Table will be held at the BT Laboratories, near Ipswich in Suffolk on Sunday the 12th of November. For BT Labs' security reasons, all access is by ticket only, so if you would like to attend please write to Roy Smith, G0RRC, listing the names of all persons attending. Please enclose an S.A.S.E. Roy's address is correct in the current RSGB Call Book.

Ian Smith, GI0VSG, will be running in the Dublin Marathon on the 30th of October in order to raise funds for the RAIBC Northern Ireland area, which is a registered charity. If you would like to sponsor him, please ring Dave on 01232 471370 for a sponsor form.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Malta, John, G4PDQ, and Ian, G4PDS, will sign 9H3VG and 9H3VH respectively from Gozo Island from Thursday the 12th until the 19th of October.

From China, special station BT1DX will be active from Friday the 13th until Monday the 16th of October during the Beijing DX Convention. Next Sunday, the 15th of October, BT1X will be on the air from the Great Wall of China.

And from Myanmar - or Burma - operators OH2BH, OH1XX and JA1BK were active as XZ1X on the 28th and 29th of September, making about 1000 contacts. This was a demonstration station from Myanmar government premises in Yangon - formerly Rangoon - and there may be a larger-scale operation later this autumn.

Now news of a special event station active this week:

The callsign GB125BRC is being operated from Paddock Wood until Saturday the 28th of October. The station is celebrating the 125th anniversary of the British Red Cross.

Next the Rally News: The Falkirk and District Amateur Radio Club are holding a junk sale in the Scout hall in Grangemouth today, Sunday the 8th of October. Morse tests are also available on demand, but please bring two passport-size photographs and the appropriate fee if you wish

to take your Morse test at Grangemouth today.

The Armagh and District Amateur Radio Club, in conjunction with the Dundalk Radio Club, is staging the All-Ireland International Radio and Hobbies Exhibition today, Sunday the 8th of October. The venue is the Fairways Hotel, Dublin Road, Dundalk, in the Republic of Ireland.

Also today, the 8th, the "Computercations 95" Computer and Radio Rally is taking place at the Hillhead Campsite, Dartmouth Road, Brixham, in Devon. In addition to trade stands and a car boot sale, there a special event demonstration station is on the air, and there is a professional flight simulator. Talk-in is on 2 metres channel S22.

The Kidderminster and District Amateur Radio Society rally also takes place on the 8th of October. The usual traders will be in attendance, and there is a bring and buy stall. Doors open at 10.00 am and talk-in is on 2 metres, channel S22.

And an Amateur Radio Caravan and Camping Club rally will take place at Elkington near Welford in Northamptonshire from Friday the 13th until Sunday the 15th of October. For further details ring 01462 811208.

It is planned to switch on the 70 centimetre voice repeater near Bo'ness in West Lothian, GB3OH, during the afternoon of Saturday the 14th of October. The repeater will operate on channel RB4, and John Wilson, GM6WQH, would appreciate signal reports either to his address in the Call Book or via packet to GM6WQH at GB7EIY.

The 2 metre repeater GB3HS, and the 70 centimetre voice repeater GB3HU, which are located near Hull, are both back on the air following repair work to the feeder cables.

The 70 centimetre voice repeater GB3LR, which operates on channel RB11 from Newhaven in East Sussex is back on the air following repair work.

Now for the HF contest news:

The Belgian ON CW Contest is also taking place today, the 8th, from 0700 to 1100 UTC. Brief rules can be found on page 24 of the September RadCom.

On Saturday the 14th of October, the European Sprint CW contest takes place between 1500 and 1859 UTC. Brief rules are on page 24 of the October RadCom.

Next weekend, the 14th and 15th, the VK - ZL - Oceania CW contest will take place. Brief rules are on page 23 of the October RadCom.

And on Sunday the 15th, the RSGB 21 and 28 MHz CW Contest takes place between 0700 and 1900 UTC. The rules are in the June RadCom. The results of the 1994 RSGB 21 - 28 MHz contest were received too late for publication in the October RadCom. The winning British operator was Peter Miles, G3KDB, who takes the T E Wilson trophy. G0IVZ and G3WOI were in 2nd and 3rd place, and the leading overseas station was UT1IA.

The full results will be published in RadCom shortly.

Next some VHF contest news:

A series of UHF and Microwave contests is taking place this weekend, the 7th and 8th, with contest activity on all bands from 432 MHz to 24 GHz. The rules can be found in the June RadCom.

On Wednesday the 11th of October, the first session of the 432 MHz Cumulative contest takes place from 1930 to 2200 local time. The rules are in the June RadCom.

And on Friday the 13th of October, the fourth session of the 144 MHz CW Cumulative contest will take place between 2030 and 2300 local time. The rules are in the May RadCom.

And now the solar factual data:

The period from the 25th of September to the 1st of October saw solar activity at very low levels and the geomagnetic field at active levels in the middle of the week. Sunspot numbers declined from 41 on the 27th, and the mean was 25. Solar flux levels remained very steady and averaged 73 units. The electron fluence levels remained at moderate levels throughout. The X-Ray flux declined from A1.6 units on the 25th, to A1.0 units by the 28th, with an average of A1.1 units. The 90-day solar flux average on the 1st of October was 73 units.

Geomagnetic conditions started at quiet levels, with an Ap index of 5 units on the 26th, but did increase to active levels on the 27th and the 28th, when the Ap index was 27 and 23 units respectively. Levels then declined to quiet conditions, with an average of Ap 11 units. The aa indices, as supplied by the British Geological Survey for the period from the 19th to the 25th of September, saw activity at mostly unsettled levels, but conditions did increase to active levels for a 24-hour period starting at midday on the 23rd. On the 23rd, 33 nanoTeslas was recorded. The quietest day was the 22nd, with 10.3 nanoTeslas, and the average was 14.03 nanoTeslas, about K2. Bartel's rotation number 2215 starts on Monday the 9th of October.

I'll repeat the figures: spots - 25, flux - 73, Ap index - 11, X-Ray flux - A1.1.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 22nd to the 28th of September, saw levels increase from 6.2MHz on the 22nd, to 7.7MHz on the 27th. Levels then collapsed and by the following day only reached 4.8MHz. This was due to the high geomagnetic levels on the 27th and the 28th. The average for the period was 6.5MHz. The darkness hour lows also declined, from 3.3MHz on the 22nd to 1.9MHz on the 28th, with an average of 2.7MHz. The daytime highs took place between 1000 and 1400 hours, which is much earlier now that the seasonal effects are beginning to take place. The

darkness hour lows took place at 0500 hours every day except for the 25th, when it took place at 2300 hours.

I'll repeat the figures: highs - 6.5MHz, lows - 2.7MHz.

And lastly the solar forecast.

This week with the quiet side of the sun looking our way solar activity is expected to be at very low levels. Solar flux levels are expected to be around the 70 mark, with little variation day to day. Geomagnetic activity is expected to be mostly unsettled and up to active levels some days. Ionospheric MUFs for the south could reach 22MHz during daylight hours on the odd better days, but are more likely to be about 17MHz, and could fall lower than that on the more geomagnetically-disturbed days. Levels for the north will be some 3MHz lower. The darkness hour lows are expected to be about 9MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Mike and G7 Victor Victor series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Lima series.

>including the wideband RX capability. If you know the mod (or where I can
>get it) please post it or E-mail it to me at myoung@umdnj.edu

>Thanks
>Mark

Hi Mark

This mod allows out of band receive on the ICW2A

Hold Down the following keys [3] [#] [B] and turn on the radio while
holding these keys down...continue to hold for 30 sec.

Now you can use the SET MODE - PL function to change the tuning
parameters.

PL=1 (default) 14[5.550] <- the figures in brackets are directly
entered via the keyboard. The figures
not in brackets are fixed and
cannot be changed.

PL=10 1[45.550]

PL=100 [145.550]

I hope thats clear enough. E-mail me if you have questions Mark.

The only country I have worked that I have not confirmed is Albania. For that reason I ask does anyone have a route for ZA1FV? I made that contact December 19, 1992 and have never received a card. Can anyone help?

If this is not the correct group for this inquiry, I would be glad to post in the correct newsgroup if I knew what it was.

All help is appreciated.

Do I correctly infer that the second receiver on the MP is also inferior to that on the 1000D? The ads talk about 'in-band' second receive, whereas I always understood that on the 'D' the receivers were almost identical and frequency independent.

Any other comments on the MP or comparisons with the 'D' would be welcome.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 OCTOBER AND FORECAST FOR 08 OCTOBER - 10 OCTOBER

1A. SOLAR SUMMARY
Activity: very low.

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/012

GOES satellite data for 06 Oct
Daily Proton Fluence >1 MeV: 2.5E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.0E+09 (very high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Oct 09 Oct 10 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Oct: 074/014

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active

Estimated Indices : A K Observed A Index 06 Oct
Learmonth 19 3444 4322
Fredericksburg 25 25
Planetary 30 22

Observed Kp for 06 Oct: 2445 3324
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
08 Oct 25 Active
09 Oct 20 Active
10 Oct 16 Unsettled to active
COMMENT: IPS Geomagnetic Warning 25 was issued on 5 October and is
current for interval 8-12 October.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
07 Oct normal normal fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Oct normal normal fair
09 Oct normal normal fair
10 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
07 Oct -5

Observed Australian Regional MUFs:
Darwin MUFs were near predicted monthly values to depressed 20%.
Townsville MUFs were near predicted monthly values to 15% depressed.
Sydney MUFs were 15-30% depressed.
Hobart MUFs were 30% depressed.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
08 Oct 0 Near normal to 15% depressed for northern Australia,
about 15% depressed for southern Australia.
09 Oct 0 About 10% below predicted monthly values
10 Oct 5 About 10% below predicted monthly values

345. 486-33 Laptop's for sale

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-07 00:00:00 UTC
From: rhl@interaccess.com
Message-ID: <rhl.136.0007F973@interaccess.com>
Source record: 237256

I have two SAGER 486-33 laptops for sale.
Each is LCD with 120MB (dblspaced to 200+),
1.4mb floppy and 8MB ram.
CPU is true 486-33DX.

Each unit includes two good batteries,
an AC charger, and a leather case.

One unit has an intermittent floppy
and includes a new replacement drive
which hasn't been installed yet.

The distributor, SAGER, has current
parts and appears to be able to
continue support.

Reason for selling: No longer needed.

Price: $750 per unit, FIRM!

Units will be delivered UPS COD,
cash only. No warranty; units are
in working condition and are sold
as-is.

Please respond via e-mail.

You people are pretty "out of touch" in my opinion.
Dont you get it? HE didnt do it, or have you not been paying attention?
I thought he did at first, but the more I listened, the more I learned,
and the more I realized that something was very wrong. He just flat didnt
do it looking at the evidence, and you cant convict on hunch, or emotion.
He passed all the defenses tests, lie detectors, all of it.

Drop it, this is a HAM group, and hams are smarter than this!
If you own any black radios, you better practice what you preach and get
rid of them.

No, Im not african American!

Does anyone have any info on sources of MMIC chips? I'm very
interested in these things--seem pretty easy to use and good
performance. Any other info would be appreciated.

------- HOW GOOD ARE RAMSEY KITS, ESPECIALLY THE WSR-1 -------

A friend has asked me if he should buy a Ramsey weather
satellite receiver, model WSR-1. I have not had any experience with
Ramsey kits, and am asking you if you can give me any advice to
relay.
Ramsey Kits has already been the topic of a number of messages
on this Group, but I was not really paying attention. Has anyone
had experience with these kits, especially the WSR-1? Generally,
how is the quality of the parts, case, instructions, performance,
and after sale support?
Thanks for your help.

First I want to say I am sorry that this has nothing
to do with the topic of this group. You may see this
message in other newsgroups, the reason is I am subscribed
to those too so please don't flame me. I have been posting
and reading to this group for a while. I just wanted to
let you people out know there is a way to get Cable TV for
FREE. I recieve this letter in the mail from a friend
that had told me it works. I gave this to one of my friends
and he had free cable in his house within 20 mins. I have not
tried this method yet but may soon try if my cable goes up in
price. If anyone would like a copy send the following to the
address below.

Address Envelope to:

FreeStuff
9393 N. 90th St.
Suite 102-289
Scottsdale, AZ 85258

Enclose in the envelope:

Send...

$1.00 U.S MONEY *** NO COINS *** NO CHECKS ***
inside a sheet of carbon paper or construction paper,
and send a *self-addressed*,*stamped* envelope to the
address above.

Thanxs,
Just think if you pay 30$ + a month. 1$ will save
you 359 + dollars a year.

355. Re: ARRL - One good reas

Newsgroup: rec.radio.amateur.misc

Source record: 237266

DA>I thought some may be interested in hearing MY ARRL tale. About 10 or
DA>12 years ago I began considering rejoining the league after letting my
DA>membership lapse when they had raised the dues three years before. At
DA>the time our family finances were very tight and the $20 dues were a
DA>significant stress on the budget. Before I could join, however,
DA>another dues increase to $25 was announced. Naively believing that the
DA>leaders at headquarters would be interested, I composed a nice letter
DA>explaining how lower income hams like myself felt that they couldn't
DA>afford what seemed to be becoming a rich man's hobby, and the
DA>continuing increase in dues meant choosing between membership and
DA>equipment. I explained that all my equipment was either second hand or
DA>home brew so it wasn't a matter of thousands of dollars of equipment
DA>that I had to spend and in fact my personal expenses for ham radio were
DA>limited to about $150 annually. I sent out the letter and received a
DA>response from a vice president or something. He said he understood my
DA>concerns and had I ever considered LIFE MEMBERSHIP at ONLY $600!!! He
DA>suggested that I could pay it in smaller payments and I wouldn't ever
DA>have to worry about increases again. I can't believe he ever actually
DA>read my letter and if he did he certainly didn't understand MY concerns
DA>or he would never have made such a suggestion. Needless to say, I
DA>didn't join and remain today a nonmember and somehow don't feel any
DA>less a ham for it. Perhaps if I ever see an indication that there are
DA>real people running it rather than politicians I may reconsider.

DA>Dan WB8VEF

Dan, if you just look at QST. With the current dues it works out to less
than $3 an issue. I think the magazine alone is worth the price of the
dues. Just my opinion. Mike WA8JDW

>Does packet radio offer anything even near to what landline
>BBSs offer with PBBSs? Is there reliable connection at
>faster speeds then 1200?

YES! Packet speeds of 56 kb are available via the WA4DSY (aka GRAPES)
56 kb RF modem. While the typical packet BBS is no more functional
than a telco PBBS, packet allows full network functionality, similar
to that offered by the internet, when fully functional protocols
like TCP/IP are used.

Of course, as is the case with landline PBBS systems, *both* ends
have to run the advanced modems and protocols for anything to happen.
This is the biggest drawback with VHF/UHF packet, you're constrained
to the lowest common denominator on the channel. If the retro set
insist on using 1200 baud, then you'll be stuck there too.

It's "Private Patch" by Connect Systems, and it is legal equipment,
though not type accepted since it isn't a radio, but it's not legal
to use on 2 meters, 222 MHz and above only since its use is classed
as Auxillary Operation. You're remotely controlling a transmitter
by radio, and you can only do that via a station in Auxillary Operation
(with some exceptions, of which this is not one).

There was a lot of good advice, but one that seemed to have been missed is: Learn to also be a good listener. Take your radio and listen on a freq. for a bit before you open your mouth. :> Not meant in a bad way. Get the feel of how things work, how people act, the type of conversation, etc. that goes on. Also, before you call in if someone is in a discussion that appears to be a deep technical discussion they may not appreciate you breaking in with a "hi I'm a new guy on the block and just wanted to say hi." They won't mind taking to you when they are just in light chatter, which is really about 90% of the time, but sometimes it is an agrievation to be interrupted when you just about to learn in detail how to recover your computer from a crash. Enjoy ham radio, it is a great hobby with great people and multifaceted. 73 Paul

>Hold it. The original stipulation was for "binary signal." You
>are describing something else.

Yes, that's trinary.

>Tapping on a table would work with the original (American) Morse
>code. Not with what hams are currently beeping on the air.

It won't work with American Morse either. There are still dots,
dashes, and spaces in American Morse. The only difference of
note is that American Morse also has spaces inside some letters.
It's still the *timing* of the key down *and* key up *edges* that
encode the characters.

You need some way to indicate key up edges. You can do that by
double tapping each element, IE tapping for the rising *and*
the falling edge of each dot or dash. So 'e' would be "tap-tap"
while 't' would be "tap---tap", and 'a' would be "tap-tap tap---tap"
and 'i' would be "tap-tap tap-tap". This is the way the old
telegrapher's sounder worked, though it typically made a slightly
different sound for key press than for key release, giving a
"click-clack" sound for each code element. That's not necessary,
however, the same click sound can be used on all edges because
it's the *timing* of the edges that encodes the information.

When I was a kid trying to learn Morse, I got the same bad
advice that I could tap out Morse on a table. Of course I
could understand what I was tapping, but *no one else could*
because essential information was missing.

I also built the "sounder" shown in an old _World Book_ article
on telegraphy. It was just a Tee shaped strip of metal clamped
above a pair of nails wrapped with wire to form electromagnets.
When the makeshift key was pressed, the metal strip would slam

down against the nail heads with a "click", but when the key was released the metal strip would spring back up *silently*. Same problem as the table tapping, essential information was missing.

An old family friend who had been a landline telegrapher showed me the error and suggested a stop be placed *above* the strip so that it would hit that when the magnet current ceased. That gave the second click signifying the key release edge, and then the Code could be read.

Both table tapping and the sounder presented in the old _World Book_ article represented an ignorance of the real nature of the modulation encoding, and thus didn't work. Louie intuitively knew that *both* edges were necessary, and his advice to add a stop to the sounder gave that second edge information which made the system work. Later, when I studied information coding in school, I understood formally why that second click was needed.

If you understand the modulation theory behind OOK Morse, this is immediately obvious. Only the keying *edges* represent modulation, but *both* the key down and key up edges represent modulation, and both generate intelligence carrying sidebands. The carrier itself is dead, like an AM voice carrier, and carries no intelligence of its own. (This is also why very very narrow filters are worthless. They cut off the essential sidebands. Hams often call this *ringing* but it really is just a stripping of the essential edge timing information from the signal.)

Specifically, anyone who is in U.S. territory under the jurisdiction
of the Federal Communications Commission, who is not a
representative of a foreign government, is eligible to test for and
hold a U.S. ham license.

The RFI is most likely being picked up by the phone itself. This can
be a problem with cheap phones. It can usually be resolved by
soldering a .01 uF capacitor across the wires connecting to the mouth
piece and the ear piece.

385. Police Radar - Some Facts

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-08 00:00:00 UTC
From: marks@fc.hp.com
Message-ID: <4590of$g5p@tadpole.fc.hp.com>
Source record: 237195

I have to chuckle at the stories about Police Radar units being inaccurate. Yes it is true that a "bad ticket" can be wrote on a "erroneous" reading. I prefer to not use the work erroneous because it is a fallacy. Radar is quit accurate! The the human being running it may not be. The reason I get on my soap box about this is because us "hams" think that since our hobby is one that involves RF energy, we know everything about it, therefor, were going to go bust the judge in the chops on court day for our speeding tickets. Boy do we find it doesn't work that way.

You see, just because the radar unit clocks the heater fan going 26 MPH (at least that's what my "Stalker" indicates> doesn't mean it is a "false" reading. Indeed no, it nailed the speed very nicely, thank you. The reason it measured 26 MPH is because of the environment it was subjected to. Now sticking the radar gun out the window can get puzzling readings as well. For instance, while parked at roadside, I can clock cars coming at me while pointing the unit straight ahead. I can also clock a car that is approaching from behind me while pointing the unit forward if there is a speed limit or similar metallic sign in front of me to bounce the radar signal off of although, I would never write a ticket on that kind of a clock because it wasn't in my training to do that so it isn't an accepted method of clocking traffic. Also, most departments I know of here in Colorado have radar certification classes that each officer is required to maintain in order to be making speeding cases. In this training, the officer is required to estimate within 5 MPH, every target it intends to clock BEFORE they even turn the radar unit on them. I had to estimate 30 cars in a row within 5 MPH with no errors or I was back in class until I could. So, when a person says that they were cited for speeding 25 MPH overt the prima-facia (posted) speed limit when they know they were only speeding 5mph over, I have to say that I am inclined to "not believe them". Believe me, I can tell if you look like you are doing 5 MPH over vs. 25 MPH. That is not to say the some moral-less police officer may blow of the estimate and turn on his unit to "constant x-mitt" and proceed to eat his doughnut, never looking at the traffic until a high pitched Doppler sound causes him to "perk-up" and take notice of the first thing with wheels has passed his position. I am sure there are officers out there like this because I too have received citations such as these.

Additionally, the training not only includes visual estimates of moving vehicles, it also includes training on listening to the Doppler shift on the audio; thats right, the radar gun has audio to use as a tool. The audio tells me if I am clocking only one target or is it toggling between multiple targets. If is a multiple target audio signal, I aint even going to bother starting my car and going after them unless they are obviously going "ludicrous speed". The audio also tells me if the target car is running a radar detector. "WHAT THE HELL?" you say. That's right, the audio signal

is distorted slightly when a radar detector is present, especially if it is an expensive and highly sensitive detector because they have an extremely strong IF. These are the tickets I love to write because they think that since they had enough time to "RIP" there detector off the dash board, I don't know they have it. (Sorry, just had to gloat>.

Moving radar is the trickiest to have to stay alert on because it is the mode that gives the most anomalies to have to weed out. Needless to say, I don't run moving a lot and give mostly warnings if I feel a need to stop.

Soooooo, Don't go to court thinking you'll bust the officer and the judge in the chops with your RF knowledge and beat any/all radar tickets. Most courts have recognized the validity of radar. If you feel you must try to beat a ticket, and I suggest that there are instances where it is warranted, approach the situation from the "human factor" involved. Not the validity of Doppler Radar. The errors will be made by the officer, not the electronics.

>supply; could it double as a p.s. for an HTX-202? Any ideas?
>I don't know what the amperage is though, not listed.
>Thanks
>KE6OCM
>--

I used to use a 1.75 amp P.S. for my Kenwood HT and it worked fine. I even used it as a quick charge for the batteries. You'll need to find out the amperage consumption for the radio and make sure the P.S. is large enough to handle it. Some of the battery chargers are very low amperage to trickle charge the batteries. Call the manufacturer and give them the model number of the charger and they should be able to give you the specs.

Hope this helps,
Chuck Spafford

Mark -

Hey, I know where Ault is, and thanks for posting. I bet you can really nail 'em on US-85; and, it's easy to forget the ever-increasing speed on the grasslands inbound from Sterling. (Not that I would know!)

Anyway, I have some questions, if you don't mind responding.

1. Have you ever had your radar swamped by a strong RF source - say a Ham transmitting while your radar is pointed his way? If so, have you ever noted or asked about the ham bands in use?

2. Do they discuss pointing your radar gun into RF sourced, other than a detector, in training?

3. Have you expermented with pointing your radar into an RF source, other than a detector, just to see what would happen - like a known source - AM/FM commercial broadcast tower or perhaps a pager tower? If so, have you noted any doppler effects?

4. Have you clock the SP? If so, when they're not running lights, etc., how much over the posted limit are they (average and peak)? {Response will not be used in any way that would have a negative impact on your police future - right?}

(You can skip this is you want. I just had to ask.)

5. Any problems noted with two police radar units pointed into each other? (Like it's never happened!)

6. Do you ingnore those hams sporting massive moble antenna farms as you know the frictional losses cannot be overcome by the available horsepower to a point of exceeding the posted limit?

For the record, I don't run a radar detector. But, I run my cruise control and radios! Just interested.

Respectfully,
Walt (KF0OS)
from Greeley, a loooong time ago.

388. Callsign server on Internet?

Newsgroup: rec.radio.amateur.misc

389. VHF Communications Magazine

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-08 00:00:00 UTC
From: Michael J Wooding <vhf-comm@g6iqm.demon.co.uk>
Message-ID: <13949419wnr@g6iqm.demon.co.uk>
Source record: 237199

Hi There,

To all subscribers issue 3/1995 of VHF Communications magazine will be shipped Monday Oct. 9th. We apologise for the slight delay, but as they say in the best circles, this was due to circumstances beyond our control - in fact our printing house had a major machine failure.

To anyone who is not a subscriber to the magazine, it is a publication for the Radio Amateur Worldwide, especially covering VHF, UHF and Microwaves. 95% of the contents are construction projects with a full backup with PCB's and/or kits. The worldwide subscription rate is UKP15.00 by cheque or UKP15.75 by credit card or bank transfer.

To whet your appetite the contents of the latest issue include:

A Frequency Counter with Harmonic Mixing
200mW GaAsFET Amplifier for 24 GHz
Part-6 of a DIY Receiver for GPS and GLONASS Satellites
Linear Signal Rectification

For further information please send me an email.

Regards ... Mike

I can't believe the officer would even give a ticket that stupid. In all the radar tickets I got (about 3 as I recall) the policeman never showed up in court. I waited 5 hours for my turn usually, and the bailif would call me and the policeman. There being no policeman, the case was dismissed. Yea, OK, where do I get my 5 hours pay?? :-) Assholes...

My older brother had a 49 Chevy, but it had a 283 race engine and a Muncie 4 Speed. It couldn't do 125 MPH, but it could jump a block in 2 seconds :-) Wonderful automobile. I think he sold it in 73 when the Arabs got pissed...

>radar tickets I got (about 3 as I recall) the policeman never showed up
>in court. I waited 5 hours for my turn usually, and the bailif would call
>me and the policeman. There being no policeman, the case was dismissed.
>Yea, OK, where do I get my 5 hours pay?? :-) Assholes...

Gee, I'm amazed. When I was a cop, I would have forgone sex to have a
chance to prosecute a peckerhead like you. I would have told my
supervisor that I couldn't handle the fatal accident I was assigned at
the same time as my court appearance. I would have told my daughter
"tough luck" when she ran a fever on the way to the babysitter's house. I
would have INSISTED that I be allowed to get out of the investigation I
was conducting in order to come to court and harass some little jerk like
you who got my attention because he was driving with his head up his ass
in the first place...

399. Calling CQDX is wrong

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-08 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <8008118451501@ccsnet.com>
Source record: 237209

Who the hell am I to call CQDX. I have been a ham for over 34 years and
in 28 of those I could only afford crummy rigs and antennas. There were
so many stations I could have worked (and called) if they were not
calling CQDX. I have NEVER called CQDX, although today I am much better
equiped. Many times when I call CQ I would prefer DX, who am I to
EXCLUDE anyone. If someone wants to talk to me who am I to be selective?
When my beam is headed towards DX and I get a domestic call it is
usually from a station using a dipole, remember all hams are not "Big guns."
And in reality to be a "real man" is not predicated on how much money
you have. When you call CQDX, think about what you are really saying
(calling anyone but no Americans need answer).

400. The real Ham Code

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-08 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <8008118454202@ccsnet.com>
Source record: 237210

The Radio Amateur is:

CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,

job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

I really disagree with you on this point. There are so many aspects to this great hobby of amateur radio.......some people like to rag chew, some like to collect wallpaper, some like to enhance the points toward DXCC.

As a person who is primarily a DXer, I use the hours I can devote to this hobby to chasing DX. When I am chasing DX I call CQDX. What's wrong with that?

73 de Gary, DJ0MEQ in Hamburg, Germany (US call: KZ0H)

402. Real defination

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-08 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <8008127177301@ccsnet.com>
Source record: 237212

The following was received via RelayNet (available by calling Bob Baker's BBS at 385-3427) from Scott Cole, I had nothing to do with writing it, but it is clear that there are some hams who really understand the rest- Burt Fisher, K1OIK.

DICTIONARY FOR THE NEW AMATEUR RADIO OPERATOR.!

With the arrival of the new licensing regulations, we eagerly anticipate an influx of new amateurs. Those who tune in for the first time may be surprised to discover that the current inhabitants of the airwaves appear to be communicating in a language which bears only a passing resemblance to English. For the benefit of the newly licensed, the following is intended as a primer in this mysterious form of communication.

WE

It is not generally realized that, as the result of an obscure clause in the licensing regulations, the holder of an amateur radio licence becomes plural immediately upon receiving the licence. This is a privilege that was formerly reserved for royalty ("We are not amused"), but with the advent of radio has been extended to all licensed amateurs. Thus, before you became licensed you would say "I am driving down the road". Once licensed this becomes "We are driving down the road".

Roses are red
Violets are blue
I'm schizophrenic
And so am I (we)

HI (or HI)

A hangover from the days of CW communication, this was intended to convey a laugh in code. In audio communications the use of this expression means either:

a) The joke I (we) just told was so unfunny that I (we) find it necessary to draw your attention to my (our) pathetic attempts at humour.

b) I (we) suspect that the modulation on my (our) radio is so poor that it is unable to reliably reproduce the sound of a laugh.

SHACK

Be it ever so humble, all non-mobile radio equipment is housed in a "shack". Even though many of our wealthier brethren have megabucks of real estate devoted to the hobby, it is still referred to by this unfortunate epithet. Perhaps a hangover from the arrival of indoor plumbing, when the budding ham was left with a redundant outdoor structure in which to house his equipment?

SILENT KEY

Passed over, passed away, ceased to be, gone to Glory, gone to that great ham shack in the sky, moved to Moncton! Obviously amateurs are as coy as the rest of the population when it comes to uttering the "D" word. Actually, since the introduction of voice transmission, the vast majority of the amateur population are silent when it comes to keys.

BAREFOOT

Originally a method of ensuring that the operator would provide a reliable path to ground in the event that he came into contact with a lethal source of power (see Silent Key above), this now refers to running a transmitter without the addition of an external power amplifier.

TWISTED PAIR

Thought by many to refer to two strange individuals given to certain unusual (and,in some communities, illegal) practices, this is actually a complex way of saying "telephone". Fortunately not in common use outside the ham community, or the Bell Twisted Pair Company would probably not have attained the position that it now enjoys.

XYL

The feminists favourite! It means "Wife" or, more likely, "The Wife" (eX Young Lady - XYL! Get it?). It's not entirely clear whether this intended to imply that the person in question is either no longer young, has ceased to be a lady, or both. Presumably with the current high incidence of divorce (yet another possible bi-product of your new found obsession with Amateur Radio), there are also a number of XXYLs out there. Habitually referring to your Spouse in her presence as "The XYL" has been known to hasten this process.

HARMONICS

The unwanted bi-product of an oscillation. For some reason this has now come to mean "children". Obviously the term was coined by someone who didn't have any because houses containing them are rarely harmonious.

73

Chosen for its rhythm in morse, this means "Best wishes". It takes the same number of syllables to speak it as "best wishes" so no real time penalty. This one is now metamorphosising into "Best 73s" which translates to "Best best wishes's"

88

"Love and Kisses". Chosen for who knows what reason. Usually employed by YLs and XYLs (see above), this should be utilized with care by all who do not fit either of these categories!

807

A type of vacuum tube popular as a power output device a few years ago. This term is now used as a reference to beer - presumably because the glass bottle of the 807 bears absolutely no resemblance to a container for the Golden Throat Charmer!

"Q" CODES

These are three letter codes, all starting with the letter "Q" which are ciphers for complex phrases. My personal favourite is - "Shall I point my searchlight nearly vertical on a cloud, occulting if possible, and when your aircraft is seen deflect the beam upwind and on the water or land to facilitate your landing?" Needless to say, this one is not in common usage among amateurs!

With the introduction of audio transmission, the codes became redundant, but there are still those out there who speak the codes as a means of separating the cognoscenti from the uninitiated.

QSL

Originally "I acknowledge receipt", now:

1. A way to say "Yes" using three syllables instead of one.

2. An alternate to "Roger", the single most popular name among amateurs (Roger, Roger).

3. The amateur equivalent of a "Big Ten-four".

4. A reference to those little pieces of card with call letters on them which are totally unknown to certain Scottish members of our group.

QSO

This is supposed to mean "Can you communicate with .... direct or by relay?" but has now been converted into a word (pronounced KEWSO) to substitute for "chat". Thus, once licensed, you no longer chat to a friend, you have a Kewso with him (or her). Worse yet, if this conversation were to take place without the aid of radio, it would become an "Eyeball Kewso"! There is very little evidence of serious or lasting optical damage as a result

of this strange practice, although it has been publicly condemned by the College of Ophthalmic Opticians. However, until he gains experience, the new ham is advised to wear protective eyewear for his first few "Eyeball Kewso's".

QSY

Officially "Please change frequency to ---kHz." On 2 metres now used to indicate that you are moving (QSYing) to another repeater.

Harder to say but much more satisfying.

QRT

Officially either "I am ceasing transmission" or "Please cease transmission". In audio it becomes "going QRT". See also "Going clear" (not to be confused with transparent).

QRU

It means "I have nothing for you". If you have nothing to say, why say it? (Because the two metre band would be totally silent if we all did that, that's why!)

QTH

Yet another advantage of your licence. You no longer have a house, apartment or address - you now have a QTH! Actually, it's supposed to mean "What is your position (or My position is) in latitude and longitude (or according to any other indication)."

Other people merely live in your town - you have a QTH there.

403. What is HI

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-08 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <8008127181102@ccsnet.com>
Source record: 237213

Here is a response I got when I asked why HI HI is used:
<HI HI>

BF> Can someone tell me why hams say the above in VOICE conversation?

Yes,

1. It is an abbreviation of two hiccups for those who are hiccup
impaired (or should I say challenged?).

2. A verbal expression accompanied by a royal wave of the hand when
when addressing one's subjects. (Ilusions of grandeur)

3. They haven't laughed in so long they have forgotten how to
verbalize "Ha Ha".

4. They are learning disabled and confuse "Hi Hi" with "Ha Ha"

5. Prestige. It makes one sound like an "old timer" whose
Daddy gave him a straight key to cut his teeth on.

6. "HI HI" - I'm trying to laugh, but I don't know how.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 OCTOBER AND FORECAST FOR 09 OCTOBER - 11 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 07 Oct
Daily Proton Fluence >1 MeV: 3.5E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.5E+09 (very high)
X-ray background: A1.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Oct 10 Oct 11 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Oct: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active

Estimated Indices : A K Observed A Index 07 Oct
Learmonth 20 3334 4442
Fredericksburg 20 24
Planetary 20 28

Observed Kp for 07 Oct: 4565 4222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Oct 20 Active
10 Oct 16 Unsettled to active
11 Oct 16 Unsettled to active
COMMENT: IPS Geomagnetic Warning 25 was issued on 5 October and is
current for interval 8-12 October.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
08 Oct normal normal fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Oct normal normal fair
10 Oct normal normal fair
11 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
08 Oct -2

Observed Australian Regional MUFs:
Darwin MUFs were near predicted monthly values.
Townsville MUFs were 15% depressed to near predicted monthly values.
Sydney MUFs were 15% depressed.
Hobart MUFs were 30% depressed.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
09 Oct 0 Near normal to 15% depressed for northern Australia,
about 15% depressed for southern Australia.
10 Oct 0 About 10% below predicted monthly values
11 Oct 5 About 10% below predicted monthly values

Message-ID: <9510101600321772@digcir.cts.com>
Source record: 237224

K1<>>No, Im not african American!

K1<>Why is it:

K1<>1. In the 40s they were called colored.
K1<>2. In the 50s they were called Negros
K1<>3. In the 60s and 70s they were called blacks
K1<>4. Today they are called African Americans

K1<>Why all the changes?

Because after a while anything we call them becomes a derogatory term!
as to why this is I don't know, but suspect "African American" will also
become "Tainted" in a few years, Then what will we call them??

Nowadays, that may not be such a bad idea. Allow Sanskrit and biblical
Hebrew as alternates.

Over in the group alt.binaries.warez.ibm-pc there's a posting of
"Amateur radio repeater directory" program. For the PC.
Be quick, stuff there expires quickly.

The usual disclaimers, etc.......

Sorry about that. I meant the "Narsies", the guys Winston Churchill was
fighting. Not those other guys.

Back to your flamefest.

423. Power supply for HTX 202?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-08 00:00:00 UTC
From: ag001@lafn.org
Message-ID: <1995Oct8.040347.14993@lafn.org>
Source record: 237279

Any problem of using a 13v dc power supply putting out 10.4w
with an HTX-202? It's actually a cell phone intellicharge power
supply; could it double as a p.s. for an HTX-202? Any ideas?
I don't know what the amperage is though, not listed.
Thanks
KE6OCM

Yes, this mastery of English grammar deserves an entry in
history one way or another <g>.

Does this mean that rap text will become part of the code
requirement thank's to affirmative action?????

>>
>Simply put.... YES!
>Good luck!

It's not an unqualified yes, though.

- An "american" university might not be located in the FCC's jurisdiction, in which case students there aren't eligible for a license unless they also have an address inside the US or its territories.

- Certain employees of foreign governments aren't eligible for US licenses even if they are physically located in the US.

Eugene Kang probably doesn't fall into either of those categories, but it's not clear from the message. He might, for example, plan to study at American University in Beirut, or at some other overseas campus near Malaysia.

Indiana Balloon Flight Rescheduled

Windtrax 6 launch scheduled for Oct 7 was scrubbed due to high winds and rain at the launch site. The new date for Windtrax 6 will be Sunday,October 15 at 7:30 am or 12:30 UTC from Whiteland, IN (south side of Indy). Windtrax 6 is sponsored by the Midstates Amateur Radio Club and will contain the following:

ATV on 439.250 running 1.5 watts vertical polarity showing two camera views and color video Id'er

GPS-in APRS format running 1200 baud on 446.000 with a power of 1 watt. Packet information shows latitude/longitude and altitude in meters.

A Cross Band Repeater-Input will be on 144.300 with outputs on 444.850 running 250mw and on 52.525 using a recrystalled and tweaked baby monitor transmitter running 80 mw.

A HF net around 3871 Khz will be on the air to take check ins and give status of the repeater thru launch to landing.

Once again, the Windtrax launch was scrubbed for Saturday Oct 7 has been rescheduled for Sunday October 15, 1995 at 7:30 am.
Please pass this announcement on.

I am using a Yaesu ft 747gx at 100 watts into a butterfly 5 band antenna. I am also feeding a 40 meter folded dipole . My neighbor is picking up my signal in his telephone (not cordless). Would it be comming in through the phone lines or is it just be picked up through the phone? Can the phone company correct this situation? Any help would be appreciated. Thanks.
Mike, K8RSU Ohio

>any help.

Hi Justin,

I'm not sure why the memories would clear when powered up. That does
seem to indicate a microprocessor problem if the display was showing
the time while turned off. I just wanted to mention that lithium
batteries are tricky to test properly. You could get a 3 volt reading
with a DVM but the battery could still be bad. I even have a tester
for lithium batteries and it indicated that a battery for a calculator
I have was OK. I replaced the battery anyway and all worked fine.

Perhaps while powering up the rig, the current draw of the
microprocessor drops the voltage enough to clear the memory.
Since the memory relies on power from the lithium battery only, the
condition of the main battery is irrelevent.

I try a new litium battery first before doing anything else. Hope this
helps.

433. A Label Past Its Time

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-09 00:00:00 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <45a5dhqnj1@mhade.production.compuserve.com>
Source record: 237089

Let's Just Stop Saying "No-Code"

A once useful label has become more trouble than it's worth.
I refer to the divisive adjective, "No-Code."
When "radio ham" was almost a synonym for "amateur shortwave telegrapher," the novelty of a license with no Morse Code requirement was worth a little attention. But today, it's no longer news.
Today, Technician Class licensees dominate new entry to the Amateur Radio Service. On average, they are probably more visible to the general public than most hams licensed General Class or above, since many Technician licensees are highly active in public safety and other volunteer efforts.
I can think of no other service with multiple grades of license in which the entry level permit is known by a negative label. A Student Pilot's license is not called a "No Passengers" ticket, though that's an accurate description. The actual name, "Student Pilot," describes the license's privileges in the affirmative.
Similarly, an ordinary driver's license is not called a "No Heavy Trucks" license. Its label merely describes the privileges that it grants.
Why should a licensed amateur radio operator be called a "No-Code Tech"? Now that Tech Plus is a formal license class, "Technician" is not an ambiguous term. No adjective is needed.
Personally, I shun the phrase "No-Code." I cringe when I hear someone say, "We're offering a No-Code Tech class starting next week." And I get quite angry when I hear a fellow ham make a disparaging remark about "No-Coders."
For who is more deserving of an active ham's courtesy and encouragement: another person who is interested in radio and might get a license someday, or another person who has already made the effort to earn one of our service's entry level licenses? From the way that some hams treat one group versus the other, I wonder if those hams have ever heard the salesman's expression, "qualified lead" -- referring to the difference between a prospect with genuine interest and a merely casual inquirer.
This concern has been simmering for some time, but it boiled over this afternoon following a pleasant QSO on a local 6-meter FM repeater. I was talking with a Technician licensee who makes his living in digital audio production, and we had an interesting conversation about the crossover that's taking place between high-end audio technology and ham radio equipment: for example,

the use of digital signal processing at the 11 kHz IF stage of the new Kenwood TS-870 transceiver.
This other ham had been interested in radio for some time, he told me, and had made several tries at getting a license, finally resolving to take a three-day intensive class so he could get on the air. With an intense work schedule, he would like to upgrade someday, but has not yet found it practical to learn Morse or study for a more advanced written examination. But he's a technically savvy, personally pleasant fellow who I'm glad to have met on an otherwise ordinary Sunday.
And yet, following our QSO, another ham came up on the frequency and made an unidentified transmission that deprecated "No-Coders." How ironic. One ham putting down another, violating both the spirit and the letter of amateur radio regulations, because the other ham had not yet arrived at the same level on the ladder that we all climb with help from each other.
Among the many definitions of "class" is "of high quality, integrity, status, or style." And "class" is part of the name of every grade of amateur radio license. Let's all behave accordingly, starting with calling Technician Class licensees by the title that they've earned instead of by an adjective that puts them down.

WHAT IS C W

* It is a unique,intimate,concise and effective communications skill still employed throughout the world.

* It is the most efficient mode in terms of power required for long-distance communication ,least susecptible to interference,and conserving of the radio frequency spectrum.

* It involves no accent or pronunciation problems,therefore providing a widely understood international language.

* It employs simpler,more reliable and easily maintained equipment than any other communications mode.

* It is an equalizer,negating age,speech impediments and dialectical differences;it provides for ready acceptance of youngsters in an adult enviornment.

* It is the ONLY radio communications mode that is understood readily by both man and machine.

Please note : the above article was submitted for packet by N1CNS as a reminder that it is a serious and viable means of communication. Any responses may be sent to me WA1HVD @ KA1AZ.RI.USA

438. Ham shops in Houston area?

Newsgroup: rec.radio.amateur.misc

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Can anyone provide names or locations for Ham shops in the greater Houston area (50 mile radius, or so). I will be in the area soon and will have some time to kill (scattered over several days).

I would really like to browse shops with a decent display of equipment, old or new. Any information will be greatly appreciated.

Also, any tips on active 2m/70cm repeaters in the area.

Bill:

You can obtain Form 610 from the FCC via fax by calling
202-418-0177 from a fax machine--or when you get the fax tone,
forward your line to the fax phone line (request form # 000610). Else,
check the ARRL's WWW page (www.arrl.org) for the four fax pages as *.TIF
files.

"Technician" will be ambiguous until the last licensee of that class with
credit for a code element has a license in his hand that says "Technician
Plus" on it...in 10 years.

>Does a WWW page or newsgroup site exist for modification help/files/chat in reference to commercial band radios for amateur
>use ?? I know that many amateurs are 2-Way techs and many of us are on Internet now has anyone formed a group or is there a
>place where people with this interest can be found ??

Apparently, not much information is out there to be had at the moment, other than from the occasional kind ham who happens to know something and posts a response.

I'm working on a FAQ on commercial radios for ham use, which up until now didn't exist. Kind of tough going so far... my requests for information from the net have generated exactly TWO responses. I'm learning much more from buying a couple of Motorola radios and doing the conversions, and from talking to the locals who've done it, but I can't do this for every type of radio available [HINT HINT HINT send me data].

This is very bad advice. Buy an external filter made for telephone rfi suppression such as the Model 465 from Industrial Communiation Engineers, Ltd. 1-800-423-2666. $15.95 the last time I bought one.

Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show

can really work.

Also, be sure to check out our WWW Home Page. It has information on upcoming shows,reviews of past shows, and even theme music. It is updated courtesy of the Boston Amateur Radio Club. Access it at: http://www.oakland.edu/barc/ham-more.html

I myself am studying for my Basic license, as it is known here in Canada and I found the post extremely well written and of great comfort. I too have been put down because I'm only studying for my Basic license and I felt rather betrayed by those fellow amatuer radio operators. I'm now going to study harder than ever...Thanks!

Gary is absolutely correct. There's nothing at all wrong with
Calling CQ DX. My interest is in accumulating countries and German
DOKs and UK grid squares. I have very little interest in engaging
in inane QSOs with folks with whom I share no interests. It's our
decision as to how we operate our radio and not that of some bore in
Maine who seems to have opinions on everything but expertise in
very little...

448. Antenna/grounding question

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-09 00:00:00 UTC
From: bbrown@harper.cc.il.us
Message-ID: <v01510101ac9f38850900@[157.178.121.1]>
Source record: 237148
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

My shack is in the closet on the 2nd floor of my 2-story duplex.

I have a nice flat roof upon which I would like to put some antenna's.

There is no conveinent ground within the shack (no cold water pipes etc).

My ideas:

I am thinking of putting an opening in the roof to get from my radio's to
any antenna's that I put on the roof.
I put a ground-rod into the ground.
I have a cable (how big and what type) going from the ground-rod up the
side of my brick duplex, accross the
roof and into my shack, thereby providing a safety ground for the equipment
within my shack.

I will, of course, want the antenna to be groundable when not in use for
lightning protection...

1) Does the above scenerio sound like a good idea?

2) How can I connect the antenna to ground when not in use (have a 2nd wire
going from the ground-rod to the antenna
but go through some sort of switch on the side of my house to connect
ground so the antenna isn't grounded
when it's being used)??????

3) What kind of groundrod and cable?

4) How to space the cable from the side of my house and my roof to prevent
any problems should it have to carry
a large discharge from static/lightning?

5) I have heard something about a code requirement that all ground systems
within a house must be interconnected...
I don't know how the ground for my electrical system is set-up, but
would I get into code-trouble by even
installing a ground-rod for my radios/antennas and ignoring the
electrical ground system?

6) Any ideas on how to do this better?

I want to be able to ground my equipment for safety, and I also want any
outdoor antenna's etc. to be
protected from lightning/static discharge and I don't want to be in
some-sort of building code violation.

Thanks for your help...please email any response.

I have only been licensed for just over 2 months, and am trying to get started safely.

I would suggest you take a trip to your local technical school and see if they have a subsciption to "Mobile Radio Technology" magazine. Several of the companys that regularly advertise in MRT are Microwave Filter Company and Wacom. Both make duplexers and have extensive catalogs. Since most duplexers are a combination of inductance and capacitance, use the commercial duplexers as your benchmark and design your own. MRT also prints technical articles some of which are about filters/duplexers.

Another source could be the "NAB Engineering Handbook". If you know somebody who maintains a local broadcast plant, they would most likely have access to one.

>>Kenwood Communications Corporation

Well Paul,

Here's how Kenwood treated ME...Not a rumor...

I sent my 241A to you mid-July...I got a nice postcard saying to expect a 10 day turnaround on the 'repair'...After many phone calls to your repair number, I finally got the radio back mid-September, "No problem found"...The problem I was having was with the non-existent aircraft RX...I found several ads (from Kenwood) in prominent mags advertising reception from 114-174 Mhz (freqs might be slightly off)...Silly me thinking 114-130 would be aircraft (ie AM) despite being assured it was from a salesperson...A Kenwood techie commented during one of my calls "Yea, we screwed up on the AM on that radio. Its not quite as sensitive as it is on others"...Another Kenwood representative sez "It WILL receive aircraft. If it gets a 50 milliwatt signal. Your radio works per the specs"...

1) If your techies only have to work 10 days out of every 60, I would like to send you my resume...

2) I immediately got rid of the piece of crap TM-241A as soon as I got it back and bought an ICOM...Incidentally, I'm quite happy with the ICOM...

Looking forward to hearing from YOU...

On Sun, 8 Oct 1995 04:03:47 GMT Abraham Stavsky (ag001@lafn.org) wrote
in rec.radio.amateur.misc:

: Any problem of using a 13v dc power supply putting out 10.4w
: with an HTX-202? It's actually a cell phone intellicharge power
: supply; could it double as a p.s. for an HTX-202? Any ideas?
: I don't know what the amperage is though, not listed.

If it's really a clean 13 volts it should be OK. The HTX-202 specs
allow for running it from a 13.8 VDC (automobile electrical system)
supply. Some have reported the rig gets overly hot when transmitting
at that voltage, if you have a really heavy hand on the PTT you might
want to go easy.

However, there are a couple of reasons to be wary of units that are
meant to be used as battery chargers. Low end chargers may not have
good ripple filtering, so you could have excessive 120 cycle garbage
on your signal. At the other end, some high-end chargers may pulse the
current to the battery in various ways, which could give you a noisy
signal and possibly exceed voltage ratings of some components.

The HTX 202 does not charge the battery when an external supply is
connected to the top-side connector; this means that the battery will
not absorb any pulses or filter any modulation on the power supply
output. I recommend being sure you know what your charger is doing
before you use it as a power source.

>At hamfests, the Icom is useless. So much
>adjacent channel crud that the desired signal is totally covered.

Following up my own post:

I got to check the IC2-AT and the HTX202 side by side at the biggest hamfest this side of Dayton on Saturday. This is a good environment for testing the interference rejection of a radio... tons of signals all over the band, signal strengths varying by orders of magnitude.

ICOM: Desired signal not copy-able at times due to adjacent channel interference/intermod/whatever. Wasn't a major problem, because we happened to pick a channel that wasn't too busy and/or didn't receive lots of crud.
HTX202: Never heard a peep from any signal that wasn't on frequency.

I still say, the HTX202 is a heck of a deal at $200 brand new. Fire away!

: time, so you had to drive quite a way to take the test in most cases.

: I sure am glad that it is becomming easier to get a license than it
: once was. I think the next step should be that the examiners have the
: necessary software to download the results of your tests directly into
: the FCC database. That would be much quicker and much less chance for
: errors.

: Then you can be one of the old timers who says, "Yep, I remember the
: good old days when it took OVER A WEEK to get a license isued." Of
: course nobody will believe you ;-)

Really enjoyed the story, John. You have quite a way with storytelling.

Yup, back in the good-old days of the mid-60s, it was nothing to wait up to a month, only to get a notice in the mail that you had not passed the test. If I recall correctly, there was no re-testing for 30 days.

There is a 15-year-old high-school student in our club who will probably get his Extra before me. He passed the code test at last months VE session. Guess I should stop resting on my laurels, with this Advanced ticket that dates back to 1968.

Feeling kind of old today...need to mail that QCWA application while I am out running errands. :-)

I agree in all but one circumstance. When a classroom study group is forming for the Tech license, it should mention no-code prominently in the ads. I can't tell you how many well-qualified and technically competent people still think that they need code to become a ham.

In particular, my SO (college degree, flight instructor, pretty savvy person) told me a few months ago that she didn't want to become a ham because of the code requirement.

We are leaving a week from today on a cross-country trip and when we get home next Thursday we hope to have completed a four-day on-the-road intensive study session so that she can sit for the exam that Saturday.

Maybe if we can reduce her IQ from 130 to 70 or so, we can interest her in the code...<gdr>.

Tell you what, put a varactor (varicap, variable capacitance diode,
pick a term) across the crystal and modulate the varicap for FM. The
deviation error won't be THAT much across the band. Or get into the
first multiplier and put a varicap across the tuning coil and
reactance modulate that sucker. Steal the circuit out of any late
50s, early 60s ARRL H'book.

To all radio amateurs

SB SPCL ARL ARLX059
ARLX059 Maine's top teacher

The 1996 Maine Teacher of the year is Robert L. Maurais, KC1IV. Maurais, an industrial arts instructor at the Frank H. Harrison Middle School in Yarmouth, was chosen for the honor on October 4.

Maurais, an ARRL-registered instructor and the 1992 ARRL Instructor of the Year, was picked from 17 candidates recommended by local nominating committees.

In 1994 Bob Maurais received the Walt Disney Company's ''American Teacher of the Year'' award, and in 1993 he was the recipient of the Maine State Christa McAuliffe Fellowship Award. His father is a ham, too: Jerry Maurais, WA1BMG.

KC1IV's selection was made by Raymond H. Poulin Jr, Maine's deputy commissioner of the Department of Education, and Peter Geiger, vice chairman of the Maine State Board of Education.

A profile of Maurais, ''A Gift for Teaching,'' appeared in September 1995 QST.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 09/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 09 OCTOBER AND FORECAST FOR 10 OCTOBER - 12 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 76/14

GOES satellite data for 08 Oct
Daily Proton Fluence >1 MeV: 1.6E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.3E+09 (very high)
X-ray background: A3.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
10 Oct 11 Oct 12 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 10 Oct: 77/16

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active

Estimated Indices : A K Observed A Index 08 Oct
Learmonth 19 2344 4432
Fredericksburg 18 27
Planetary 20 21

Observed Kp for 08 Oct: 3335 5342
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
10 Oct 20 Active
11 Oct 20 Active
12 Oct 16 Unsettled to active
COMMENT: IPS Geomagnetic Warning 25 was issued on 5 October and is
current for interval 8-12 October.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
09 Oct normal fair-normal poor-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Oct normal fair poor
11 Oct normal fair poor
12 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
09 Oct 0

Observed Australian Regional MUFs:
Darwin MUFs were near predicted monthly values.
Townsville MUFs no data.
Sydney MUFs were 15% depressed with spread F during local night.
Hobart MUFs were 15% depressed.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
10 Oct 0 Near normal for northern Australia and about 15%
depressed for southern Australia.
11 Oct 0 About 10% below predicted monthly values
12 Oct 5 About 10% below predicted monthly values

Bob, I'm reposting this for you in a form that more will be able to read :)
------------------------------enclosure--
Can anyone please help me?

On the weekend of October 21st the Scout movement is involved
in the Jamboree On The Air (JOTA). We at the Phoenix Venture
Unit (Kenton & Kingsbury District) had arranged for a licenced
radio operater an a few of his collegues to use our Unit Den as
a base for a radio station. We have made all the arrangements
for masts and wires to be strung for aerials telephone lines
etc. but he has just been given the completion date for moving
house and it is that weekend, therefore we are without a
licenced operator. Is there anybody or a radio group that would
like a change of venue with opportunities for new contacts that
would be willing to help us out, time is of the essence with
regard to arrangements and licences etc. If you can help or
require any further details please reply asap.

Bobc@woodhill.demon.co.uk
Bobc@roverden.demon.co.uk
Robert.Carter@dos.us-state.gov

------------------------------end enclosure-----------------------------------

Please direct your replies to Bob.

To all radio amateurs

SB SPCL ARL ARLX060
ARLX060 Hams, stars in demo

An Amateur Radio special event station Friday evening will add interest to an astronomy demonstration for New Jersey middle school students.

The occasion is a demonstration of the Kuiper Airborne Observatory, in a flyover for the Liberty Science Center in Liberty Park, New Jersey. The center expects some 600 students from the Summit Middle School in Summit, New Jersey, who will camp there overnight. Center officials invited members of the United Astronomy Club of New Jersey, some of whom are also radio amateurs, according to Al Tencza, NX2Q.

The station will be set up at the science center and will sign W2LS (on loan from licensee Bill Savell), from 2200 October 13 to 0330 UTC on the 14th, on the 20, 15, and 10 meter bands on SSB as well as locally on 6 and 2 meters. The demonstration also will be carried live on local television Channel 13.

The airborne observatory is operated by the National Aeronautics and Space Administration and is used to demonstrate the use of airborne telescopes, in both the infrared and visible spectrum. Students are able to command the telescopes from the ground.

I had a ground mounted Butternut for several years, and called the builder down in South texas a couple of times with questions. Now that he is bought out, I suppose good answers are in short supply. He told me it was best designed for the ground. I once tried to move it up about 10 feet and found the swr going through the roof. If the reaials weren't trimmed just so, this was the result. Beyond that, you will probably have to do some tuning to the system, and if you use 30-80, I can guarantee it. With lots of radials on the ground, it always worked pretty well. A vertical up high might work better and give a different angle of radiation, but unless you want to make multiple trips up to move it and experiment, you might think about keeping it on the ground for awhile.

Before the advent of the codeless lecense, the technician class still required a 5 wpm code knowledge. Hence, the newer term "no-code tech". You are right--hams with higher licenses should not put down no-code folks for not knowing morse. On the other hand, I've heard several of these lately condemning the code, wanting to start petitions to kill the code requirements, etc. This is just as negative in my view as the general who puts down the tech. Nothing wrong with the tech license if all you want to do is work on vhf and uhf. Some of them want to work hf and forgo the requirements.

The only full service Ham Shop in Houston is up at Spring and it is called
Houston Amateur Radio Supply. The phone number is 713-355-7373.

As for 70 cm repeaters, I use 442.75, pl 103.5.

Enjoy,

Lewis

Well, it's the closest thing US amateurs have left to a general
circulation technical magazine. If you've ever read a real technical
magazine, you'll note that they are full of ads too. Something has
to pay the costs, and you'd really be screaming about prices if
subscriptions had to cover them. Subscription prices typically only
cover postage and handling. It's the ads that pay the staff salaries,
paper and printing costs, and those nice little checks to the authors.

Besides, the ads are often the major technical content of the
magazines. Love those chatty Mini-Circuits ads.

>The mag. gains income for the ARRL, but to make it a requirement for

>73 Robert

Would that that were true. I've been trying to generate interest
in a usenet CAD group for exchange of amateur schematics, board layouts,
and netlists so that we *could* do a reasonable job of conveying
technical information. ASCII art just doesn't hack it.

I'm sure the phone is _rectifying_ the signal, but it is likely that the signal is _picked up_ on the phone line. After all, on most HF bands you need a considerable length of wire to effectively receive.

There are filters you can buy to put between the phone and the wall jack. They don't always work, but it's worth a try. I have had some luck with them.

Don't expect any help from the phone company, though. They only have control over the wire outside your house, which is probably not where the problem lies.

Good luck,

Pierre

Congrats...the dold SX43 was probrably seen in more movies than any other communications rcvr in history! Originally, it came out in Dec.1947 (from ads in ELECTRONICS), and was produced for a number of years. I have one from late 1948 (original family purchase). There are 4 selectivity positions, Broad/Sharp Normal, and, Broad/Sharp Crystal. The rcvr also had FM reception above about 40 Mhz (actually, bands 5 & 6). I do have some info from and old Sams book. But Hallicrafters manuals (photocoy) are available from the son of the original technical documents head of Hallicrafters (for about $30) from:

ARDCO ELECTRONICS
P.O.Box 95
Berwyn, IL 60402

This is one of the great Hallicrafters, along with its same era cousin, the SX-62, which uses the same circuits, but is configured more in a Shortwave listners dialsetup. The SX62 had one big tuning dial across the whole upper half of the unit.

That's right. Why back in the old days I had to walk to school, 40
miles in the driving snow (both ways, even in the summer). We were
poor folks, so I had to work after school for 8 hours a day. When
I came home, I had to do chores for 4 hours, then 2 hours of homework
(on a light day), and then off to bed. In the morning I had to get up
milk the cows, feed the chickens and do another 3 hours of chores around
the farm before the sun came up and I could begin my walk to school.

But you try to tell that to the kids now'a'days and do they believe you?

<All us geezers around the table in unison> NO!

Seriously, when I was first licensed, you had to visit an FCC Field
Office. I think that there were only 3 in the state of Florida at the
time, so you had to drive quite a way to take the test in most cases.

I sure am glad that it is becomming easier to get a license than it
once was. I think the next step should be that the examiners have the
necessary software to download the results of your tests directly into
the FCC database. That would be much quicker and much less chance for
errors.

Then you can be one of the old timers who says, "Yep, I remember the
good old days when it took OVER A WEEK to get a license isued." Of
course nobody will believe you ;-)

My mother-in-law has some shortwave equipment for which she has no use. She isn't looking to sell it, but she's considering donating it to a ham-radio teacher and would like to know how much it's worth. Any feedback on fair market value of the following would be appreciated. Since I won't describe the condition of the pieces in detail it would be easier if you can give three price estimates based on condition: Like-New (N); Typical wear and tear (T); Distressed (D). In fact, most of the equipment has been very well cared for. Feel free to fill in the blanks and return this to me. I'll summarize if there's interest.

Thank you very much.

490. Land Mobile Radio FAQ needs your input!

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-09 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <45bbhi$29s@mrnews.mro.dec.com>
Source record: 237229
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

The Land Mobile Radio FAQ is now under way... I need your support!

What is it?

A listing of those surplus police and taxicab radios from the various manufacturers, how to identify them, what band they're on, how easy it is to tweak them into the ham bands, average price used, etc., all in one file for your flea market shopping convenience!

What it's not is a mod manual. You won't find out HOW to do the mods in the FAQ. That's up to you. You will find out where to get the manufacturer's manuals, most of which have detailed tuning procedures. Some of the radios can only be programmed by the manufacturer, and/or by using the manufacturer's proprietary software. Such details will be in the FAQ.

I'd like to include any and all mobile or handheld radios aimed at the commercial or public service market. Many of these out-perform the imported synthesized units by a long shot, are cheaper, and make great ham rigs! Let's put these great radios back to work and on the air!

I NEED YOUR INPUT TO MAKE THIS A REALITY!

You don't need to mail me manuals or anything like that, unless you WANT to. All I ask is a few bits of data for any of these radios you or your friends may have worked on in the past. If you've put one on the air, you've had to answer these questions, so fill 'em out and send 'em in!

Model? Manufacturer, model name (like Mastr II, Syntor, Delta, etc.), model number

Band? These radios are usually made for use in a specific band of frequencies, like 30-50 MHz, 150-170 MHz, 450-470 MHz, etc.

Freq control? Crystal, synthesized/ROM programmed, synthesized/microprocessor programmed

Average price? What did you pay? What prices did you see when shopping? New or used?

Manual price? How much did the manual cost?

Mod difficulty? How hard was it to get it tuned to ham band?
Easy: re-crystal, tweak a few tuning screws
Difficult: program a new ROM, swap a few parts
Extremely difficult: Major modification and re-design of some circuits, you must pay

authorized technician to use
manufacturer's software

How to indentify? What details do you need to know to tell these radios
apart? Does the serial number tell you anything? Does
the Model number? Are there physical differences?
This is the stuff you need to know when sorting
through the radios at the flea markets. This
information is usually in the manufacturer's manuals
in great detail.

I will re-post this notice about every other week for a while, until the FAQ
is somewhat filled out.

My net address is: randolph@est.enet.dec.com
All information, network pointers, periodical references, anything, is
appreciated, and thanks in advance!

-Tom R. N1OOQ randolph@est.enet.dec.com

Welcome to the 'frequency'. A squelched Burt (in the killfile) makes the QRM revert to an acceptable level. All should try this.

Hey Burt, I can't hear you, so if you try one of your infantile insults towards myself, it will literally fall on deaf ears.

Hello

I am taking a graduate course in a local university that requires a 'project'. I would like my project to be a paper design on a 900 Mhz duplexer. Are there any technical papers, articles, books I could use as a reference to complete my project. (The ARRL antenna handbook was a GOOD beginning reference, but I am looking for the 'theory and math' behind the designs).

Thanks...

A new one recently surfaced. When Hammarlund advertised they were selling
their company, their writeup included them taking credit for the word
"ham"; said they'd been in business since 1910, and operators back then
using Hammarlund gear were referred to as hams.

An electric fence may be regarded as a capacitor, one plate being the wire,
the other ground. The popping you hear is the wire being repeatedly charged to
a high voltage level under a fault condition. When the installation (of the
fence) is done properly, there should be no leaks to ground. However, if the
insulators are dirty or (more commonly) the bare wire is touching a tree
branch, grass, or some other object, the capacitor is imperfect. The clicking
noise you hear is caused by the steep wave front as the wire is re-charged.

Suggest (with the property owners permission) you inspect the entire length
of the wires concerned. Check for leaks to ground, poor connections and dirty
insulators.

73, Drew, VK3XU Telstra Research Laboratories.

Hello everyone. Does anyone know how to filter unwanted "rantings"
using the Agent or Free Agent newsreader programs? I would like to use
the feature if it exists. I was unable to find it anywhere {including
the helpfile}. Thanks!

Silent Key

Silent Key

It is with deep regret that we have to announce the passing of
Ken Petith VK2LT. Ken died in Balmain Hospital on July 18th
following a short illness. Ken was 75 years of age and is
survived by two sons and their families, both residing interstate.

After retiring from the Police force with the rank of Inspector,
Ken studied for and gained his amateur radio licence in 1981-82,
joining the Gladesville Amateur Radio Club in the process.

He worked in the Education section of the club until the late 80's,
gathering students for the live lectures and assisting on the
lecture nights. Ken promoted the club and its activities to all
he met and spoke to on radio.

Retiring from active participation in club activities whilst
maintaining his membership, Ken enjoyed travelling around Australia
and visiting his sons and their families interstate.

He will be missed.

Vale Ken VK2LT

Club Secretary

Aub Topp report

Update on Aub Topp

After two months in hospital, Aub is home and although he says it
will be a long haul back to health, he is progressing quite well.

When I spoke to him today (7/10/95) he had been down in his shack
looking at the various projects which are only partly cmpleted and
trying to decide which one to tackle first when he has improved a
little more - the mind is willing, he says, but the body isn't
quite ready yet.

In view of his now apparent steady progress this will be the last
bulletin issued.

Eric Fossey
Divisional Secretary

Council meeting

WIA Divisional Council Meeting
Orange 14 October 1995

As announced last week the NSW Divisional Council meeting for the month of October will be held in the Blue Room, Orange City Bowling Club, Warradine Street, Orange, commencing at 2.00 pm sharp.

All amateurs, WIA MEMBERS OR NOT, are invited to attend such a meeting and see what happens at a Divisional Council Meeting, and to meet your Councillors.

As mentioned previously, it is anticipated that, time permitting, the Chairman will allow questions from the floor but naturally from WIA members only, unless any non-member wishes to ask any questions regarding membership and/or membership benefits etc. (FACILITIES WILL BE AVAILABLE, ON THE DAY, TO APPLY FOR MEMBERSHIP), incidentally, afternoon tea/coffee and biscuits will be provided.

I look forward to meeting you, but in the meantime, if you have any queries, comments, observations etc. please let me have them not later then Thursday next, on:
PHONE (02) 831-8450 OR BY
fax (02) 621-1516

Your Council is committed to serve ALL members whether they are from the Sydney area or from the country and we welcome your comments and views.

HOPE TO SEE YOU IN ORANGE !

Cesar Miranda VK2TCM
Divisional Councillor

UN50 and JOTA

UN50 Programe

The United Nations celebrate their 50th anniversary this year. Several activities will be organised to commemorate this anniversary. The official anniversary date is October 24, two days after the JOTA. As you know, the world organization of the Scout movement (WOSM) cooperates with several UN agencies on various issues and in different parts of the world. The following activities are organised for the 38th JOTA to commemorate the UN 50th anniversary.

HB9S, the Worlds Bureau's station will transmit a message from UN Secretary General Boutros Boutros-Ghali, and/or other officials. Exact transmission times and frequencies are indicated below.

The World Scout Bureau's radio station HB9S will operate from Geneva, most of the Saturday and Sunday, with short breaks during the night. Transmitters will be on the air simultaneously on the 10/15/20 metre, 160/80/40 and 0.7/2 metre bands The station manager, Yves Margot, HB9AOF, will be assisted by Rochard Middelkoop, PA3BAR. World Bureau staff members and an internationa team of Scout radio amateurs. HB9S will transmit a JOTA message delivered by UN Secretary General Mr. Boutros Boutros-Ghali, and/or other officials, according to the following schedule on Saturday 21 October.

Frequencies

14. 290 MHz 09.00 GMT
14.290 MHz 14.00 GMT
07.090 MHz 14.15 GMT
14.290 MHz 18.00 GMT

Making a contact with HB9S takes some patience in Practice. Usually many stations are calling at the same time. Please follow the instructions given by the operators and do not interfere with on-going contacts. The operators will do the best they can to make contact with Scout stations world-wide and speak to Scouts in as many languages as possible.

VK2 WICEN News

VK2 WICEN News

This week's news is somewhat brief, due to the many events this month and the need to mention them.

This weekend is the Hunter region Training Camp, Lake Macquarie, and also the VRA AGM; we trust all parties had a good time.

Next weekend is the Hawkesbury Canoe Classic, commanded as usual by Kevin VK2CKD, and packet radio will be used in a major role. Also next weekend is an "Introduction to Emergency Management" course: positions are available for WICEN members, and we thoroughly recommend it; this information comes to us from Barry VK2AAB. Also next Saturday we believe is the Gosford Display Day, normally run by Andy VK2XRX, but we have heard nothing more about this event. On Monday week is the Hunter meeting, ably run by Pauline VK2GTB; and finally, if that wasn't enough for you, there is JOTA on the weekend afterwards (21st-22nd October), and there is no excuse for not helping out with future Amateur radio operators and WICEN members.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter

each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

News Briefs

NEWS BRIEFS

Sydney's Powerhouse Museum has acquired a rare piece of computer history, Difference Engine Number One, designed in the 1820s by mathematician and engineer Charles Babbage.

Only six of the Difference Engines were built, by his son Henry Babbage, in 1879. One is at Harvard, one at Cambridge, one at the Science Museum in London, and now one at the Powerhouse. Two others are missing. The engine bought by the Powerhouse had been languishing in a shed in New Zealand for the last 100 years.

Consumer electronics manufacturers Phillips, Sony, Toshiba and Time/Warner have agreed on a technical standard for the next generation of video disks, which will eventually render video cassette recorders obsolete.

The new disks will use Sony's "8/15" EFM modulation system, giving a storage capacity of 4.7 gigabytes, equivalent to 130 minutes of video. Toshiba's modulation scheme offered a higher capacity of 5GB (or 142 minutes of video), but had less immunity to playback and encoding errors than the Sony system. Players for the new optical disks will be backwards compatible with existing CD-ROM and audio and video CD systems. The disks themselves are constructed from polycarbonate sheets, each 0.6mm thick, so the disks will have two recording surfaces, compared with just one surface on conventional CD-ROMs.

Australia could have its own spy satellite by 2005, according to a report in the Australian. The cost of launching a "bird" has dropped dramatically in recent years, and, according to the Defence Science and Technology Organisation, a Low Earth Orbiting satellite (LEO), with an optical resolution of 10 metres could be in operation for a "mere" $50 million. Such a system could be used to monitor ship and troop movements, and infrastructure developments at airfields, ports, and other military facilities. Australia currently buys defence images from foreign owned satellites companies, which could be a disadvantage in time of war.

The Government also plans to spend $1 billion on an Airborne Early Warning system before the end of the decade, and is continuing to develop the Jindalee Over-the-Horizon Network for long-range surveillance.

--Information from the Sydney Morning Herald and The Australian

JOTA opening ceremony

Jamboree-On-The-Air national opening ceremony

The national opening ceremony for JOTA will again be broadcast from VK1BP on Saturday afternoon October 22nd. It will commence at 0400Z on frequencies of 7.090 MHz, 14.170 MHz and 21.190 MHz simultaneously.

Please note this is a change in the 20 metre frequency to 14.170.

Following the speaker the usual call-backs will be taken on each frequency in turn, one at a time, returning to each band until there are no more callers. If you do not get through in the first dogpile keep on trying.

I would appreciate advice of your handle, QTH, call sign, the closest regional city or location and the approximate and the approximate number of young people the station is hosting during the whole weekend.

Good luck and many thanks for for your J.O.T.A. efforts.

73's Peter VK6HU
National J.O.T.A. Co-ordinator

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(29 SEPTEMBER - 05 OCTOBER)

ISSUED 06 OCTOBER

SUMMARY
Date 29 30 01 02 03 04 05
10cm 74 73 73 73 71 71 70
A 2 4 2 15 17 33 (20)
T -3 12 2 8 -3 -11 -11

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 29TH SEPTEMBER TO 1ST OCTOBER, INCREASING TO QUIET TO UNSETTLED ON 2ND. THE GEOMAGNETIC FIELD WAS AT UNSETTLED TO MINOR STORM LEVELS ON 3RD, INCREASING TO MAJOR STORM LEVELS ON 4TH, THEN REDUCING TO ACTIVE TO MINOR STORM LEVELS ON 5TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE DEPRESSED EARLY ON 29TH, RETURNING TO NEAR NORMAL THROUGH TO THE EARLY PART OF 3RD

OCTOBER WHEN FREQUENCIES WERE DEPRESSED TO 15 PER CENT, CONTINUING THROUGH 4TH AT 15 TO 30 PER CENT DEPRESSED. FREQUENCIES WERE MOSTLY DEPRESSED TO 15 PER CENT ON 5TH, OTHERWISE NEAR NORMAL.

COMMENT: HF CONDITIONS WERE DEGRADED ON 29 SEPTEMBER AND DURING INTERVAL 03-05 OCTOBER.

FORECAST (06 OCTOBER - 12 OCTOBER)

SOLAR: VER LOWw

GEOMAGNETIC: 08 OCT: ACTIVE
09 OCT: UNSETTLED TO ACTIVE
10 OCT: ACTIVE
11-12 OCT : UNSETTLED TO ACTIVE
QUIET TO UNSETTLED LEVELS ARE EXPECTED ON OTHER DAYS.

IONOSPHERIC: HF CONDITIONS FOR THE FIRST TWO DAYS OF THE FORECAST WEEK ARE EXPECTED TO BE MUCH IMPROVED AFTER RECENT DEPRESSED/DEGRADED CONDITIONS, WITH MUFS NEAR PREDICTED MONTHLY VALUES. HOWEVER FURTHER DEPRESSIONS AND DEGRADATIONS ARE EXPECTED AFTER 08 OCT DUE TO FORECAST RECURRENT GEOMAGNETIC ACTIVITY

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BORADCAST OFFICER

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

The next meeting of the Waverley Amateur Radio Society will be held on Wednesday, October the 18th at 7:30 p.m. The venue is the society's premises in Vickery Avenue (off New South Head Road), next door to the Rose Bay R.S.L. club. Members and anyone else interested in amateur radio are invited to come along.

A speaker for the evening has yet to be arranged, but come along anyway for a ragchew.

The first Saturday afternoon of each month is project time so bring along any projects where other members may be able to help with problems.

--Simon Buxton - VK2EII - Publicity Officer

Club news: Illawarra

The Illawarra Amateur Radio Society will be holding its Monthly Meeting this coming Tuesday commencing 7.30pm at the SES Building Montague St North Wollongong.

Rob McKnight, VK2MT our Repeater Officer, will be giving a practical Demonstration on setting up an 828 for 2 metre.

Ken VK2KWG
Publicity Officer

Club news: Liverpool

The next meeting of the Liverpool Club will be on Wednesday night, the 11th of October. Next week!

Brad Granger VK2QQ will be giving a talk and working demonstration on MDS and Pay-TV and how to build a system to watch it for about $20.

Everyone is welcome to come along. Tea and bikkies provided. Bring a friend.

The venue as usual will be the hall at the Glenfield Scout Camp in Cambridge Avenue at Glenfield, just off Moorebank Rd.

See you on Wednesday night, at 7.30pm.
Brad, VK2QQ Publicity Officer

Club news: Parramatta

The Parramatta Amateur Radio Club's 2m repeater, after a long rest and modifications, is now back on air.

The repeater is sited at Kurrajong Heights and has a terrific RF view of Sydney and surrounding areas. During its original operational period it received many excellent coverage reports.

The repeater can be accessed on 146.750MHz with the normal negative 600KHz offset, but note you will need a CTCSS tone of 123Hz to access it.

Most modern radios are capable of encoding standard CTCSS signals, for those people who do not have a CTCSS capablility the club will be releasing a CTCSS kit that should work with most radios.

Thanks to the club members who re-wrote the software, aligbed the rpeater and provided the tower and site.

Barry Goldsmith VK2GQD
President PARC

ARLD050 DX news excerpts

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

UGANDA, 5X. Paul, 5X4F, now has a 160 meter antenna and is active daily at 0300z on 1831 kHz with 100 watts. He has also been on 3501 kHz at 0030z, 7001 kHz at 0300z, 10101 kHz at 0122z and either 21205 or 21240 kHz SSB at 1300z or 1930z. QSL via KB4EKY.

CHINA, BY. During the Beijing International DX Convention, October 13 to 16, BT1DX will be on the air from the convention hotel. BT1X will be the DXpedition station operating from the Great Wall on Sunday, October 15.

THE GAMBIA, C5. Gary, C53HG reports he will try to be active on 80 and 160 meters this Fall and Winter.

MONACO, 3A. John, K1VWL, will be QRV November 21 to 28 and plans to be in the CQWW Contest. Outside contest hours, try 1824/1828, 3523, 7023, 10105, 14005 and 18070 kHz.

RWANDA, 9X. Mark, 9X/ON4WW, will be doing low band work on Fridays and Saturdays. At 2330z, try 1830 kHz and at 2335 try 3501 kHz. At 0200z, try 1830 kHz and at 0205z try 3501 kHz. QSL via ON5NT.

CHAD, TT8. TT8NU is active almost every day on 18070 kHz between 1900 and 2100z. QSL via F6FNU.

QSL NOTES. QSL TY8G via LA8G, PO Box 5626, N-7002 Trondheim, Norway.

COMING EVENTS

OCTOBER 21ST-22ND JARTS WW RTTY CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2XSB, or the Secretary (Pat) VK2JPA at VK2AAB.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB. Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

506. Re: My response to a threat

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-10 00:00:00 UTC
From: ki7zd@coho.halcyon.com
Message-ID: <45cuhv$h7u@news1.halcyon.com>
Source record: 237101

Burt,

You are such a fool, dont your realize that ANYONE reading my portion of this post will NOT see anything nearly looking as a threat?

Dont you care that posting this publicly really, honestly, verifies that you are not only a self destructive person, but also a total fool?

I wont need a hired hand to see you get laughed at in court also. You have told me to "HIRE A LAWYER" Ok, Im waiting. But dont take too long, or Ill have a case of my own.

I will say "Im sorry" to all the decent people on the group here for even posting to, or about this LID. But, I had to due to the fact that my name and call was posted here in a threatning manner, without my consent.

The story:

A while back, I received a list of names that are protesting Mr. Fishers use (or should I say abuse) of the new group. This list was to be sort of a petition I guess. I fired up the keyboard, and told Mr. Fisher about this list, thinking he might understand my intent. WHich was purely neutral, and basicly done in a friendly manner. Mr. Fisher was harrasing me over my statement of the words "African American". He asked why I was calling/speaking in these terms. My reply is as follows, containing the "Advisory" if the petition against him. I, in now way have threatend Mr. Fisher, and, basicly, as you can see for yourself, the message was totally neutral in emotion.

Wherefore, KI7ZD prays, on this 9th day of Oct. 1995 that Mr. Fisher, SHUT UP before causing any further em-bare-ass-ment to himself!

And remember who your real enemy is Burt!! Its yourself.

I close stating: I sent MR. BURT FISHER email requesting that NO mail, either email, or any, be sent to myself in the future, and that any mail received from Mr. Fisher, will be considered continuing harrassment. Thus giving me ACTUAL cause to seek a court room in SEATTLE for an harrasment action.

Respectfully,

R. Seacat
KI7ZD

Mine does. An alinco dj-f1t
At work the managers use business radios on 154.6.
They like it that they can get ahold of me easily now.
And its nice to know whats going on
And when I get off work I pop it over onto a repeater and have
a nice chat on the way home!

Come on Drew, you should know better. The FCC has authorized unlicensed operation of a certain power on a certain set of frequencies. If you modify the radio to transmit outside the authorized frequencies, or have modified the radio for more power, or using a non-type accepted radio, or using an amplifier of some sort, then you are a bootleg CB'er.

Regards,

Duffy - WB8NUT

Those capitalist swine. This really makes me mad! How can those people
go home to their families, after making MONEY all day long!! Gosh, there
out to a law, that profit be unlawful, and socialism the state code! By golly,
no PROFIT! Yes, let them feed us for free on our internet accounts, so we
don't have to leave the computer table, cigarettes, and vodka, to waddle
over to the mail box.

P.S. I've found a good way to get cheap cigarettes! Order them by the crate
from Singapore...

Found a crystal for 50.4MHz which someone said is a standard calling frequency. ANd measured the output RF power, 2.5 watts. If I see co-channel interference on TV channel 2, then it's probably a band opening, and time to see if I can hear someone on AM.

As an aspiring no-code tech .... er tech that is easy to
understand as you hear the feelings of many about the
class. You sort of feel like the lesser cousin and are
apologizing for not really belonging.

I am attending the first club meeting of the area tonight
... I will find out what the attitude to a tech is I
imagine although it may be different here as the club is
co-sponsor of the class I am attending which is teaching
us to pass the novice-tech class.

Hi all. Reasonably new to the net & I was wondering how or who decides what newsgroups are created/maintained.

I am an active 6MX op and would be interested in seeing a newsgroup for this purpose.

Perhaps even a more generic rec.radio.propagation newsgroup???

Any comments anyone? - would be appreciated.

73 Adam

IMHO, QST is a good balance of operating-interest articles, technical articles aimed at typical hams, technical articles aimed at beginners and technical articles aimed toward the high-tech ham. It has sections that "tell us what's happening in our hobby," sections devoted toward the ARRL Field Organization (the ARRL is not just us guys and gals in Newington!).
Yup, and it has ads, too. Some people actually use them to look at what new equipment is available. Approximately 1/3 of ARRL revenue comes from the sale of advertising.

In fairness, there are sections in QST that I don't read, and don't even think should be there. But I am willing to turn the page to the things I do like. After all, they are there for someone else, and many a ham doesn't want to see the high-tech articles that interest me.

>The mag. gains income for the ARRL, but to make it a requirement for
>membership is questionable at best. Current NEWS & technical articles
>can be printed via INTERNET and PACKET RADIO these days!!
>73 Robert

You are certainly correct, and a number of dedicated volunteers are doing just that. Unfortunately, they seem to come and go in direct proportion to the amount of time they are able and willing to devote to doing so. I have seen many an excellent internet program started, then dropped when no one wanted to carry on. There is a distinct advantage of having an organization with a paid staff to do this sort of thing. Unfortunately, most people rightly view INTERNET and FREE as synonyms. If ARRL were to publish on the INTERNET, who would pay the paid staff. (And who would do the work if we didn't have a paid staff?) I just can't see having the decreasing number of people who do not have INTERNET have to fund it all. There are potential ways around this, and the growing sophistication of the WWW may allow us to do just what you propose, once we can find ways of offering the service to ARRL Members.

As a matter of fact, the "ARRL Letter," devoted entirely to current news, is available on INTERNET. We would hope that those that read it will choose to be ARRL Members, but it is not restricted to our Membership. This is one of those things we do because we think it is

important for Amateur Radio. It is available at our ftp site (currently in the ARRL area at oak.oakland.edu), or by email from listserv@netcom.com (subscribe letter-list). It has an ARRL slant, but the editor (Jim Cain) bends over backwards to have it be straight news. Try it, I think you will find it is worth the price. :-)

Actually, I believe membership is a requirement for the magazine. Correct
me if I'm wrong, but AFAIK, they don't have a "magazine only" option.

The reason for this is simple. They hold the magazine out as a reason to
get people to sign up. That way they get a lot of 'members' who are only
interested in the magazine, not the organization's political agenda. As
long as they can claim a lot of 'members', the organization has clout with
the FCC. And if those 'members' don't care what's going on at the top as
long as they get a magazine every month, so much the better.

It would be interesting to see how many would deliberately take the
"magazine only" option, even if it were exactly the same price as the
"membership and magazine" option.

Tried finding it but no luck. Do you remember the name of the file?
I tried searching by "repeater", "amateur" and came up empty. I know
those guys are quick, but this is sort of very rapid removal.

Anybody else got another source for repeater directories if this one
is cyberdust?

OMIK is a great Amateur Radio organization. It is good to see that
some people are working towards mutual respect and not division.

Most hams that have been reading the I-net newsgroups for sometime know
Burt is a jerk and only likes to ferment trouble with stupid posts.
The best way to handle Burt is to ignore the fool. Maybe we all need
to talk with his I-Net service provider about his racist and hate
filled ramblings.

I've had this happen several times -- if you are holding on to the lower
portion of the keypad (accidentally, of course) and you hit the power
switch, the memory clears. This is because when the MR and VFO keys are
depressed during power-up, the FT-530 is instructed to clear all memories
and return to factory defaults. It's easy to accidentally have a thumb
or other finger on those keys during power up -- maybe that's what happened.

Also, during a soft-reset such as this, extended receive is disabled; hold
down the up- and down-arrows during power-up to reenable extended RX.

What would you call the no-code license? "Technician" certainly isn't accurate for the second entry level license class (Novice, is the proper entry level license) as I doubt if even 5% of the "new" Technician class licensees even know the first thing about such simple technical issues as how their HT works (certainly couldn't fix it), how a repeater works, or even how to program the repeater controller.

Ask one of them even the simplest details of packet (AX.25 protocol), satellite (OSCAR nn) operations, or repeater linking and I'm sure the answer will be an unqualified "duh!" Shall we refer to the newest entry level license as the DUH-class ... how about the No-Class?

532. Digest of Articles - QST Sep 95 (Long - 49k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-10 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <45de5e$75f@horus.infinet.com>
Source record: 237127
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the September, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:
(USA) oak.oakland.edu/pub3/hamradio/arrl/infoserver/digests
and
(Europe) ftp.funet.fi/pub/ham/arrl/infoserver/digests

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:A Receiving Antenna that Rejects Local Noise
Author>Beezley, Brian - K6STI
Source>QST Sep 95, pp. 33-36
Abstract>Presents the design of an MF receiving antenna that discriminates against locally-generated noise.

Digest>It is a frequently observed fact that vertical antennas pick up a great deal more noise than horizontal ones. This article explains the reason.

Locally generated noise, both atmospheric static and electrically generated, is propagated primarily by ground wave transmission, but most amateur communications are conducted using sky waves. Vertical antennas are very effective in receiving and transmitting ground wave signals, whereas horizontal ones are largely insensitive. It is for this reason that all AM broadcast stations use vertical antennas. In contrast, for sky wave reception, horizontal antennas provide significant gain over verticals.

Horizontal antennas are, however, sensitive to one component of ground waves, the so-called surface wave. This sensitivity is maximum in the direction of the antenna wire, just the opposite of its sensitivity to all other signals. With these facts in mind, the author has designed a receiving antenna that is nearly omnidirectional in its response to sky waves but rejects all ground waves, including the surface wave component. To eliminate the surface wave, he borrowed a concept from the "8JK Beam"; that is, he splits his antenna into two halves and feeds them out of phase. His design is most effective on lower frequencies, especially the 160- and 80-meter bands. He does not recommend its use on frequencies higher than the 40-meter band.

The antenna is made up of two horizontal loops, shaped like 45-degree triangles; that is, triangles with one right angle and two 45-degree angles. The two hypotenuses run parallel, spaced closely together. In fact, they are formed from a single length of 450-ohm ladder line. The two triangular loops are in the same plane and form a square, 25-feet (7.6-m.) on each leg. The ladder line is twisted a half turn so that, electrically, the two loops form one continuous conductor like a distorted figure "8" that crosses in the center. The antenna is fed at the center of the square through a kind of transformer balun.

The transformer is wound on a ferrite core. One winding connects to the coax feed line; the other to the antenna. The winding that is connected to the feed line is wound of nine turns of enameled wire. The antenna winding is made up of eight turns. A variable capacitor of 100-pF. maximum capacitance must be connected in series with it; Mr. Beezley likes to split the eight turns at the center and connect the capacitor between the two halves of the transformer coil to preserve absolute

balance. The two ends of the antenna winding are attached to the two sides of the ladder line at its center point, thus driving the two loops in opposite phase.

The author analyzed the antenna at 3.5-MHz. with it elevated 10-feet above ground. Signal-to-noise improvement is at least 24.6-dB. above that of a vertical monopole, assuming that the desired signal is arriving at a 20-degree elevation angle. For signals arriving at higher angles, the enhancement approaches 30-dB.

The same configuration of loops can be made in different sizes and/or raised to higher elevations. Raising the height will have little effect on the signal-to-noise ratio, but will produce higher signal levels. Making the antenna smaller size will reduce the signal and noise levels equally. It may become necessary to make up for the lower level by using a preamplifier.

Mr. Beezley's theoretical results have been borne out in practice by a number of hams. The following article reports on the results found by two of them.

Title>TA2:A K6STI Low-Noise Receiving Antenna for 80 and 160 Meters
Author>Andress, Edwin A. - W6KUT
Source>QST Sep 95, pp. 37-41
Abstract>Construction and operating results of a W6STI "square" receiving antenna.

Digest>W6KUT has erected a 21-foot (6.4-m.) square receiving antenna in accordance with W6STI's square design. His good results are especially interesting because his station is located between the arms of a "Y" formed by 6900-volt a.c. distribution lines. They generate continuous noise that usually registers over S-9 on his receiver. He had tried to improve his reception by erecting a shortened 80-meter dipole at 84-feet (25.6-m.) height, and also by using vertical rotary loops, but neither made much improvement because the noise arrives from multiple sources.

Mr. Andress erected his antenna 10-feet off the ground and fed it with RG-213 coax. The transformer balun windings were made with No. 24 enameled wire on an Amidon FB-77-1024 core. The antenna winding is 20-turns, with a tap at 10-turns. The full winding is used for 160-meters and the tap for 80-meters.

For band switching, he provided two tuning capacitors selected by a relay. One is of 80 pF. maximum capacitance and is in the circuit at all times. It, alone, tunes the 80-meter band. For 160-meters, a relay switches a 500-pF. maximum capacitor in parallel with the smaller one. At the same time, another relay switches taps on the antenna winding on the transformer balun.

The capacitors and relays are located at the center of the antenna, along with the transformer balun. Twelve volt d.c. operating current to the relay coils passes through the coax feedline. It is prevented from

flowing through the transformer by a 0.1-mfd blocking capacitor; r.f. is blocked from getting into the relay coils by a 2.5-mH. r.f. choke in series with them.

Tests were made of the S-meter readings comparing the phased verticals, the dipole at 84-foot elevation, and the square. The square provided signal-to noise enhancement very near to the theoretical value of 24-dB. over the verticals and the dipole.

In a side-bar with the article, Keith A. Fowler - W6BCQ also reported experiences with a square. He had previously tried practically every known kind of noise-reducing antenna for 80- and 160-meters, with results less than satisfactory. Then he built a square for 80-meters and, compared to his other antennas, he states: "Any and all line noises are reduced simultaneously from typically S-9 to S-1, or less. With a 15- to 20-dB. preamplifier in the receive line, the desired signal is nearly the same level as when received on the transmitting antenna."

Title>TA3:Hot-Rod Your ICOM IC-725 Series Transceiver - Part 1
Author>Vermasvuori, Jukka - OH2GF
Source>QST Sep 95, pp. 42-45
Abstract>Analyzes design deficiencies in the IC-725 and proposes modifications to overcome some of them. More in next issue.

Digest>OH2GF uses an ICOM IC-725 transceiver which is very similar, if not identical, to the Models IC-721, IC-726, and IC-728. In reviewing the performance of his rig, he found a number of "drawbacks".

1. The audio frequency response was too narrow. High frequencies were attenuated badly. At 2.0-KHz., the response was already 6-dB. lower than at lower frequencies. This severe attenuation of highs significantly reduces SSB intelligibility.

2. The AM-mode audio had a "mega-bass" quality.

3. The in-band intermodulation products seemed quite high.

4. On CW, signals from outside the passband caused phantom audible beat notes that sometimes interfered seriously with weak signals.

5. The AGC compressed SSB signals, then allowed noise and splatter to rise to high levels during even short pauses between syllables. Switching the AGC control from FAST to SLOW made almost no detectable difference.

6. Lack of selectivity early in the i.f. chain gave little protection against adjacent strong signals.

7. Synthesizer phase noise was disagreeably high.

8. The AF gain control was severely compressed. Almost all the variation in gain occurred with less than 1/4-turn of the control knob, making the adjustment unnecessarily critical.

9. The rig contained no speech processor, so its "talk power" was not commensurate with its 100-watt output.

In trouble-shooting the audio problem, he found that the low-pass filter was designed to roll off at an absurdly low frequency. He then discovered the probable cause for such a seemingly poor design. A spurious signal at 7,000-Hz. was being generated by the synthesizer board and was getting into the audio amplifiers. Instead of correcting the problem, apparently the design engineer merely lowered the low-frequency cutoff to hide the problem!

Mr. Vermasvuori solved the spurious-signal problem by changing a ground lead on the synthesizer board, then corrected the high-frequency rolloff by changing several resistors and one capacitor.

When he examined the AM detector, he found that it was designed contrary to all diode-detector rules of good practice. Standard procedure is to make the diodes' audio load impedance at least ten times higher than that of its d.c. load, but the IC-725 designer saw fit to make it ten times smaller! To avoid completely rebuilding the AM detector, he applied a "Band Aid"; he added a 3300-ohm resistor at a strategic point that partially ameliorated the poor performance.

In analyzing other circuits, the author similarly found other problems which he describes in detail in the article. He uses restrained and polite language in discussing his findings, referring to the transceiver as "a well-designed radio". But, in the light of his findings, others might use quite different language. At least in the case of the AM detector and the audio amplifier chain, it seems more appropriate to say that it was very poorly designed.

In the next issue, Part 2 of this article will describe further additions and modifications that he felt necessary.

Title>TA4:An Automatic, Remote Antenna-Tuning Controller
Author>Mandelkern, Mark - KN5S
Source>QST Sep 95, pp. 46-49
Abstract>Construction details for a remote controller to operate the capacitor drive motor of an antenna tuner located at the antenna.

Digest>KN5S operates the low bands using a vertical antenna, 42-feet (12.8-m.) high, tuned against elevated radials. Since the vertical radiator is less than a quarter-wavelength on 80- and 160-meters, a wide-range antenna tuner is necessary. Furthermore, especially on 160-meters, retuning is necessary after almost every change of frequency. For reasonable efficiency in such an antenna setup, a tuner located at the base of the monopole is highly advantageous. As the author states, remote control of the tuner from the shack is not necessary, but after making many trips out to the antenna during rain and snowstorms, one comes to feel that it would be very nice, at least!

He has designed and built a very versatile and totally automatic system for controlling the remote tuner. This article describes the controller

only, since it can be used to drive a wide variety of motor-adjusted capacitors or inductors.

His controller is built around a conventional directional coupler that tells the controller when the SWR is too high, and a phase discriminator bought from military surplus to instruct the controller which direction the motor should drive. In addition to the directional coupler and phase discriminator, the system requires some additional electronics which the author illustrates in a complete schematic and parts list with the article.

Shown in photographs, but not described in detail, is KN5S's complete antenna tuner showing the motor drive train, the vacuum-variable capacitor, separate coils for 40-, 80-, and 160-meters, and other associated equipment. He leaves the controller operating continually while he is operating. As soon as he begins to transmit, the tuner goes into action to tune the SWR to minimum. Automatic means reduce the power output of both the transceiver and external amplifier to low values if the SWR is above 2:1 and restores full power as soon as it goes below that value.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor - QST

Title>PR1:Japan Radio Company JST-245 Transceiver
Author>Swanson, Glenn - KB1GW
Source>QST Sep 95, pp. 86-92
Abstract>Performance review of a new HF transceiver that also covers the 6-meter band. Its features include all those common to top-line rigs, and more. Reviewers rated its performance highly in all respects.

Digest>The new Japan Radio JST-245 has all of the features of an up-to-date, top-of-the-line HF transceiver, and then some! Its cabinet is medium-sized with a built-in power supply. The rig provides two VFOs and 200 memories. The frequencies of both VFOs can be displayed simultaneously. The memories store not only frequency, mode, i.f. filter settings, and AGC setting; they also store the antenna port in use (one of three), information on split frequency operation, and whether the r.f. preamp is to be on or off.

The RIT/XIT control is adjustable over a 10-KHz. range with a separate sub-display showing the amount of offset. The VFO resolution is 2-Hz., so it can be set to within 1.0-Hz. although the resolution of the frequency counter is limited to 10-Hz. (There is a zero-beating procedure that one can use that allows the beat to be set to within 1-Hz.!)

Receiver performance is excellent. There is a switchable preamp, and with the preamp on, the noise floor with 500-hz. i.f. filter in use

ranges from -132 to -140 dBM. The blocking dynamic range with the preamp on ranges from 118 to 126 dB.; higher with it off. The second-order intercept is +64 dBM with the preamp on, and the third-order ranges from +0.2- to +4.6-dBM. through the main part of the HF bands.

Audio quality was rated superb by all those who tested the rig. When one is using headphones, there is not a trace of high frequency hiss.

Performance on CW was also rated as excellent. The shaped keying is very good, although there is a barely detectable shortening of the leading character element when operating semi-breakin. CW operators will be especiallly pleased by the fact that one can select the sideband on which the CW signal is heard. This simple feature, which was always standard equipment with old vacuum-tube receivers, is the one feature that many old-time brass-pounders miss the most. It is a wonderful QRM evader!

In digital modes, the rig performs well using AFSK (although the panel switch is labelled "FSK"). It is one of the few transceivers that makes all i.f. filters available when AFSK is in use.

Although the JST-245 is called an HF transceiver, the general coverage reception covers from 100-kHz. to 54-MHz. and the transmitter covers the 6-meter band. One VHF expert called it the best 6-meter rig that he had ever used!

Another extra feature is a built-in keyer that can be adjusted over the range of 8- to 40-wpm. The dot-to-dash ratio comes with a default setting of 1:3, which is the accepted standard, but it can be adjusted to fit personal preferences from 1:2.5 to 1:4.5.

The rig comes with a built-in computer interface and most of the functions can be controlled from a personal computer. The transmitter uses MOSFETs in the final amplifier and power output is adjustable from 5-watts to more than 150-watts on all bands and in all modes, except AM. A built-in automatic antenna tuner is standard.

Standard i.f. filters include 2.7-KHz. for SSB and wide CW, and 6.0-kHz. for AM. Several optional narrow filters are available for the second i.f. (9.455-MHz.) and third (455-KHz.) They include a pair of 500-Hz. CW filters and a pair of 1.8-KHz. SSB filters. A 300-Hz. CW filter is available for the second i.f. All of these optional filters can be installed at once and selected from the front panel. A pass-band shift control continuously adjusts the bandwidth of the receiver by narrowing the i.f. from both sides at once.

JRC has also announced a Model JST-145, which is identical to the -245, with the omission of 6-meter operation and built-in antenna tuner. Also the i.f. bandwidth control function is disabled, but can be added with the insertion of the optional 2.7-kHz. i.f. filter in the second i.f.

In summary, the JST-245 was found by all reviewers to be a worthy contender for a top-quality amateur transceiver. The manufacturer's list price is $2990 and there are a number of peripheral accessories available at extra price, including mikes, a monitor, external speakers, a tone unit, and a number of other items. The price for the JST-145 is not quoted in the article.

TECHNICAL CORRESPONDENCE (TC)

Title>TC1:Adjusting HF Yagi Matches
Author>Beezley, Brian - K6STI
Source>QST Sep 95, p. 95
Abstract>K6STI proves that matching adjustments can be accurately made with Yagi antennas on the ground, pointing upward.

Digest>For many years, ham "conventional wisdom" has held that it is not necessary to raise a Yagi antenna to full height before making the adjustments to match the input impedance to the feedline; it can be done accurately from ground level by aiming the antenna vertically at the sky. K6STI, the well-known supplier of antenna analysis software, felt some uneasiness at that assumption.

Using his NEC-based software that accurately accounts for ground effects, he modelled two yagi antennas: a five-element 20-meter beam with high F/B ratio and a four-element 20-meter Yagi with low F/B. His calculations show that the input impedance of both antennas change only a negligible amount when moved from the ground position to free space. Therefore, at least in this example, "conventional wisdom" is correct.

Title>TC2:Matching Small, Shielded Receiving Loops
Author>Ellington, Scott - K9MA
Source>QST Sep 95, pp. 95-96
Abstract>Describes an efficient method of matching and tuning a receiving loop antenna.

Digest>Small loop antennas make excellent receiving antennas, especially on 80- and 160-meters. A single loop can be used to reject interference broadside to the loop, or else a phased array of loops can be used as a directional antenna. Shielding the individual loop or loops provides deeper nulls and also minimizes coupling to the feed line or surrounding objects.

Tuning a loop to resonance requires a capacitor that is often inserted into the loop on the side opposite from the feed point, for symmetry. With shielding, symmetry is not a problem and Mr. Ellington describes a way that two capacitors, one tuned and the other fixed, can be used to match the feedline to the loop,

The method is illustrated in a schematic diagram showing a square loop 5-feet (1.5-m.) on each side, made of RG-62 and fed at the center of the bottom leg. The shield of the coax is cut and a gap left in the center

of the top leg, which is horizontal.

An equivalent circuit is also shown; it is a "pi-section" made up of a capacitor, C(1) across the input, the loop in series, and another capacitor, C(2) across the output. The radiation resistance of the loop acts as the load. C(1) is fixed and C(2) is the variable tuning capacitor.

Typical capacitor values for the 5-foot loop are: for 1.8-Mhz. - C(1) = 4970-pF. and C(2) = 696-pF. For 3.5-MHz. - C(1) = 2950-pF. and C(2) = 83-pF. The operating bandwidth can be broadened at the expense of signal capture efficiency by adding a small-value non-inductive resistor in series with the loop. The author suggests 3.3-ohms, which provides a 2:1 bandwidth of about 50-khz. on both bands. With a receiver pre-amp, the efficiency is more than adequate.

Because of the distributed capacity in the coax, the 5-foot loop may be too large to resonate on 75-meters, so it may be necessary to reduce the size slightly.

Title>TC3:More on Cylindrical Capacitors
Author>Formato, Richard A. - K1POO
Source>QST Sep 95, p. 96
Abstract>Shows a formula for calculating the effective dielectric constant of a cylindrical capacitor, the dielectric of which is made up of any number of concentric cylinders of different materials.

Digest>In Technical Correspondence, QST May 95, W9KWD provided a formula for calculating the effective dielectric constant in a capacitor with two separate dielectrics, Teflon and air in his example. Mr. Formato, in this letter, generalizes with a formula for calculating it for any number of separate layers of different materials. The formula is as follows:

K(eff) = LN(b(N)/a) / LN((b(1)/a)^(1/k(1)) * (b(2)/b(1))^(1/k(2)) ...
* (b(N)/b(N-1))^(1/k(N)))

where: a = radius of inner conductor, in mm.
b(1), b(2)...b(N) = outer radius of insulating layers
N = number of insulating layers

(Note: b(N), the outer radius of the last insulating
layer is the inner radius of the outer conductor)

For example: in a capacitor having four layers of insulating materials with radii of 2, 4, 6, and 10 mm. and dielectric constants of 3,4,7, and 10 and inner conductor radius of 1.0 mm., the effective dielectric constant is 4.4855.

LAB NOTES (LN)

Title>LN1:Computer Interference
Author>ARRL Laboratory Staff
Source>QST Sep 95, pp. 97-98
Abstract>Suggestions for reducing or eliminating RFI from computers.

Digest>Computers operate with high-frequency digital signals, i.e. pulses with square edges. Inherently, they internally generate noise over a broad spectrum of HF and VHF. Unless they are very well shielded or isolated, they will certainly cause RFI to HF and VHF reception. This report gives a number of suggestions for mitigating the interference.

The FCC rates two classes of computers: Class B for home use and Class A for industrial environments. Class B devices are much less noisy! Any computer being sold by retail stores to the general public is almost certainly Class B.

Most noise picked up by receivers comes in through the antenna. Noise from the computer can be reduced by physical separation and by improved shielding of the computer case.

Some noise gets out of the shielding on power lines and other connections leading out of the case. All cables should be shielded. In addition, often noise radiation can be reduced if the power leads, and other external cables, are wound several times around ferrite cores.

Before buying a computer, one may find it possible to test it in the store for noise output. Arrange with the store manager to take a portable radio, tuned to the frequencies of interest, to the store at times when all computers are shut off; then turn the one being considered on, for test. If one store will not cooperate, shop until you find one that will.

To trouble-shoot an existing computer installation, turn it on first with no accessories plugged in (i.e. without keyboard, mouse, or monitor). If it is noisy in that configuration, and if the noise is broadband hash that decreases in intensity with each switch to a higher frequency band, the noise is probably emanating from the power supply. Install a common-mode choke on the a.c. line cord at the computer. If that does not cure the problem, try an a.c. line filter.

For more information, obtain the ARRL book: RADIO FREQUENCY INTERFERENCE: HOW TO FIND IT AND FIX IT.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:More on Silent Amplifier Control With the Kenwood TS-850S Transceiver
Author>Krausse, Howard - KE8M
Source>QST Sep 95, p. 93
Abstract>Eliminate clicking noise from keying relay by replacing it with

a reed relay.

Digest>KE8M found the clicking noise of his TS-850S amplifier-keying relay to be annoying. He replaced it with a silent reed relay from Radio Shack, their part No. 275-233.

The operating coil of the relay is rated at 11-ma. at 12-volts, but the TS-850S can supply only 10-ma. through pin 7 of its REMOTE jack. The author put a 100-ohm resistor in series with the coil to reduce current flow. Apparently the relay operates reliably with the reduced current.

Title>HK2:A Super Simple Mobile Hand-Held Holder
Author>Harris, Art - N2AH
Source>QST Sep 95, p. 93
Abstract>Using the dashboard cup holder in a Dodge minivan to hold an H-T.

Digest>N2AH likes to use his HT while driving his Dodge minivan. To support the rig, he makes use of one of the cup holders molded into the dash just above the car radio. He found a heavy plastic cup that fits snugly into one of the holders and clips the H-T's belt clip over the side of the cup. Since the cigarette lighter jack is only a few inches away, the power cable can be neatly dressed.

To prevent the cup from bouncing out of the holder, he cut a small piece of wood to fit tightly into the holder and applied sealant to hold it in place. Then he screwed the bottom of the cup to the wood.

Title>HK3:Better SM-220/BS-8 Station Monitor Operation With the Kenwood TS-440S Transceiver
Author>Berlin, Michael A. - WU1M
Source>QST Sep 95, p. 93
Abstract>How to use the Kenwood BS-8 Panoramic Adapter and SM-220 Monitor with a TS-440.

Digest>Mr. Berlin wanted to use a Kenwood SM-220 Station Monitor and a BS-8 Panoramic Adapter with his TS-440SAT, but the BS-8 adapter was designed to be used with older rigs, such as the TS-520. It requires direct access to the 8.83-MHz. second i.f. signal, and that signal was not made available at the rear panel of the -440.

He tapped directly into the circuitry at the cathode lead to the diode D3. That point is electrically available by soldering onto jumper W-12, so he attached one short lead of 70-pF. mica capacitor to it and the other lead to the center conductor of a 12-inch (30-cm.) length of RG-174 coax. The capacitor end of the cable shield is grounded to the chassis by a short jumper.

To pass the cable out through the rig, the author lists several options. One is to push it through one of the vent slots; another is to attach it to the rear panel ACC2 jack, if it is not being used. A phono plug is

attached to the cable's free end and it is plugged into the jack on the SM-220 rear panel. He reports excellent results with no apparent loss of i.f. signal due to circuit loading.

Title>HK4:Two Speakers Help Beat Hearing Loss
Author>Freedom, Tom - W3HVE
Source>QST Sep 95, p. 94
Abstract>Mounting two speakers to replace headphones.

Digest>W3HVE suffers from some hearing loss, especially at high frequencies. Disliking headphones, he assembled two speakers atop his transceiver facing with him, with each speaker aimed directly at one of his ears.

He mounted the two 4-inch (10-cm.) speakers in cigar-box baffles filled with fiberglass. He finds that the arrangement works well and provides improved intelligibility.

Title>HK5:Open-Wire Spreaders With a Twist
Author>McMullin, Mac - W6DSY
Source>QST Sep 95, p. 94
Abstract>Assembling home-made open-wire lines.

Digest>W6DSY has rediscovered the trick that was commonly used many years ago when open-wire ladder lines were almost always home made. To fasten the plastic spreaders to the two wires, he drills a small hole near each end and inserts a short piece of fine wire through each. Then he lays the spreader between the two parallel conductors and fastens it in place by twisting the fine wires around them.

He states that this allows him to avoid having to thread the spreaders down the entire length of the main conductors (!)

Title>HK6:Pipe Insulation Bundles Cables
Author>Noftz, Edward A. - WB8TCZ
Source>QST Sep 95, p. 94
Abstract>Use slit-tube thermal insulation to bundle neatly wires and cables.

Digest>To bundle cables in his shack, Mr. Noftz uses foam pipe-insulation tubes, obtained at a hardware store. These are slit along the entire length and are sold in 3- and 6-foot (0.9- and 1.8-m.) lengths. In use, he cuts them to whatever length he needs, pulls the slit open, inserts the wires, then lets the slit reclose itself. Finally he wraps wire ties, or electrical tape, around the circumference at intervals.

The insulation comes in different sizes; he finds that made for use around 1-inch (2.5-cm.) pipe to be most convenient.

Title>HK7:Correction to "Curing MF/HF Ceiling-Fan Noise"
Author>Michaels, Charles J. - W7XC
Source>QST Sep 95, p. 94
Abstract>Clarification to a hint in H & K, QST Jun 95.

Digest>W7XC's hint printed in H & K, QST Jun 95, applies only to Casablanca fans that use "Intelligent Controls", not conventional switches. The choke that he described is installed in the bell-shaped ceiling housing, not the motor housing. The warning not to operate the fan with part of the bell housing removed was to obviate the possibility of the fan's falling from its housing.

NEW HAM COMPANION (NHC)

Title>NHC1:Beep... What Did That Repeater Say?
Author>Bowles, Chester S. AA1EX
Source>QST Sep 95, p.75
Abstract>How courtesy tones are used in repeater operation.

Digest>In this article, Mr. Bowles explains the fundamentals of repeater operation. Specifically, he discusses the "courtesy tone", or beep, that most repeaters use to mark the beginning of a period of availability.

All repeaters keep transmitting so long as the user is talking unless a timer times out in the meantime. But they do not shut off instantly when the talker stops; they typically continue for a short time in case the user is only taking a breath. That period is called a "tail"; depending upon the repeater, it may range up to 30-seconds, in some cases more.

The timers are used to prevent one user from monopolizing the facility. When either the user stops talking and the tail expires, or the timer times out, the repeater resets itself and sounds its courtesy tone. At that point, the next user can begin talking.

Some repeaters do not use a courtesy tone, and some of those use a very long tail; others use no tail at all! The long tail encourages many short exchanges of a few words each.

To avoid confusion, before using an unfamiliar repeater, listen to how others use it and, at all times, obey the rules of common courtesy. Remeber that repeaters are meant to be shared.

Title>NHC2:Nine Hours at Headquarters
Author>Ford, Steve - WB8IMY
Source>QST Sep 95, pp. 76-78
Abstract>The events of a typical day at ARRL Headquarters.

Digest>For the benefit of ARRL members who never have the opportunity to visit, Assistant Managing Editor Ford prepared this article to

illustrate the major happenings during one day of office routine at the Newington, CT Headquarters

The Headquarters building contains 40,000 square feet of floor space, where 113 employees work. They average 42-years of age and use 110 computers.

On the average day, 1200 telephone calls, 600 E-mail messages, 70 FAXs, 7000 pieces of mail arrive, both incoming and outgoing. During that same day, the QSL Bureau processes approximately 8000 cards.

The article lists major happenings that occurred during May 25, 1995, which was selected as a typical day. The listing includes the routine happenings that might be found in almost any office in any enterprise of similar size. Included was an unscheduled power outage; a surprise party for a female employee about to have a baby; a luncheon for the editors and production staff, cooked by the managing editor, to celebrate the day that one more monthly issue of QST was "put to bed"; among other activities.

Title>NHC3:The doctor is IN
Author>Various
Source>QST Sep 95, pp. 79-80
Abstract>Questions and answers of interest to newcomers.

Digest>Questions addressed in this issue include: how to use QSL bureaus; how the term "ham" originated; how to connect a TNC to a computer that has no unused serial ports; how to track down an apparent loose connection; whether or not to use a balun at the center of a dipole; RFI that sets off an intrusion alarm; what kind of battery to use for emergency backup; use of Esperanto on the air; and other subjects.

Title>NHC4:Travel Highlights for Radio Buffs
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Sep 95, pp. 81-83
Abstract>A listing and description of historical museums of radio across the USA.

Digest>There are a surprising number of museums scattered across the USA that collect and display old radio equipment of all types. This article lists, and briefly describes, 19 of them. Seven are on the East Coast between Providence and Baltimore, one in West Virginia, three in Illinois, one each in Wisconsin, Minnesota, Nebraska, and Colorado, and two in California.

Title>NHC5:Bricks to the Rescue
Author>Ford, Steve - WB8IMY
Source>QST Sep 95, pp. 84-85
Abstract>Describes VHF/UHF amplifiers for use in amateur transmitters.

Digest>Many amateurs start out in the hobby with a VHF or UHF hand-held transceiver (H-T) with maximum output power of 2- to 5-watts. Generally, this is enough power to access local repeaters and, via simplex operation, nearby amateurs. When the time comes that they want to reach out to farther distances, they need more power.

"Bricks" are slang references to solid-state amplifiers that are available to boost the power output of an H-T up to 25-watts or more. They are called bricks because they are often built in a package about the size and weight of construction brick.

To use a brick, one must also have a power supply capable of delivering 13.8-volts at from 5- to 25-amps. For mobile use in a vehicle, the power can probably be taken directly from the vehicle's battery if the drain is modest. But if it is above 15- or 20-amps, it may be necessary to install a heavy-duty alternator and battery.

Most bricks have a switch labeled SSB/FM. The only function of this switch is to change the delay time that it takes for the brick to switch from transmit to receive. When operating FM, this should be instantaneous, but in SSB mode it should delay for a second or two before switching to be sure that the user is really finished talking.

RADIO TIPS (RT)

These are short items, scattered among the articles in the New Ham Companion section, of interest to newcomers.

Title>RT1:Instant DX Information
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Sep 95, p. 85
Abstract>This brief item explains call sign prefixes and how to determine the country of origin of a station with a callsign having an unfamiliar prefix.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Holocaust in Oklahoma City
Author>Webb, Thomas M. - WA9AFM/5
Source>QST Sep 95, pp. 24-28
Abstract>Amateur public service during the communications emergency caused by the terrorist destruction of the Oklahoma City Federal Building.

Digest>On April 19, 1995, a terrorist explosion destroyed the Alfred P. Murrah Federal Building in Oklahoma City. The same explosion caused lesser damage to many other buildings and facilities in the center of the city and put a severe overload on all communications in the area.

Under the leadership of the ARES Emergency Coordinator, Jim Jones - K5PER and the Trustee of the Salvation Army Emergency Communications Center, Frank McCollum- N5FM, the Oklahoma City amateur radio community organized and operated HF nets, VHF repeaters, packet nodes, and public service radio. This article details many of the services that were provided over several days, and some of the lessons learned during the emergency conditions.

Title>GI2:Thrills, Butter Churns and Honeycombs: A Visit to the Hammond Museum of Radio
Author>McElroy, Gil - VE1PKD
Source>QST Sep 95, pp. 29- 32
Abstract>Description of the Hammond Museum in Guelph, Ontario, Canada.

Digest>Fred Hammond - VE3HC has collected antique radio gear of all types and established a radio museum in Guelph, Ontario, about 50-miles west of Toronto. It is one of the largest and finest collections in the world. The article contains a description of the collections and also a series of color photographs showing the very impressive collection.

All interested people are welcome to visit the museum, located at the corner of Curtis and Regal Roads in Guelph, but by appointment only. To arrange a visit, call or write to Fred Hammond at 81 College Ave. W, Guelph, Ontario N1G 1S2, (519) 822-8323 (home) or (519) 822-2960 (office).

Title>GI3:Like Son, Like Father: One Ham's Dad Learns a New Way to Call Home
Author>Smithson, Tony - KN4TX
Source>QST Sep 95, pp. 63-64
Abstract>The father of a ham becomes one.

Digest>KN4TX became a ham at age 18 and, for the following 15-years, pursued his hobby in the USA. Then, with a wife, one child and another on the way, he and his family moved to the Caribbean island nation of Trinidad and Tobago. This meant that his father and mother were cut off from close communications with their son, daughter-in-law, and grandchildren. Using the allure of easy and frequent communications, he persuaded his father to get an amateur radio General Class license.

With great reluctance and self-doubt over his ability to learn Morse code, the father, Morris Smithson, succeeded and obtained not only a General Class, but also an Advanced Class license and now holds the callsign KS4SU.

The son, in the meantime, moved even farther away, to Bogota, Columbia for two years. Now, he and his family are back in the USA and are separated from his parents by only a few hundred miles. But they still hold amateur radio schedules two or three times a week on 75-meters.

Title>GI4:Hard-Core QRP
Author>Arland, Richard H. - K7YHA
Source>QST Sep 95, pp. 66-67
Abstract>Describes ham activities with power output limited to a few milliwatts, or less.

Digest>QRP is usually considered to refer to operations with power output of no more than 5-watts. But a group of amateurs operate what they call "hard-core" QRP and establish communication using milliwatts, or even microwatts. They measure their accomplishments by calculating the miles per watt covered in a given QSO.

As of December, 1994, the 40-meter record for hard-core QRP stood at 1,000,000 miles per watt. On December 26 of that year, AA4XX and KA3WTF arranged a schedule to try to better the record. The former was located about 16-miles south of Raleigh, NC and the latter in Larksville, PA. AA4XX set his transmitter to emit an accurately measured 221 microwatts of power and KA3WTF received his message and gave him a signal report of 229. This transmission established the current 40-meter record of 1,900,000 miles per watt!

Title>GI5:California Mobile Antennas and the Moment of Truth
Author>Selman, Robert "Doc" - WE6A
Source>QST Sep 95, pp. 68-69
Abstract>Large home-built mobile antennas surpass common commercial models in radiation effectiveness.

Digest>A group of about ten California amateurs who like to operate 75-meter mobile with high-power amplifiers and relatively large antennas on their vehicles organized a competition among themselves. In a large, flat, open space, they set up an antenna range and tested their antennas to determine which produces the best signal, measured by a highly precise field strength meter 2000-feet away at ground level.

The antennas differed considerably and ranged from modest to outrageous. Included for reference purposes were two common commercial antennas: a Hamstick and a Hustler Super-Resonator. The heights were limited to no more than 13.5-feet (4.1-m.)

The measured signal strengths ranged from 47.5-dB. to 59.2 dB. But the two popular commercial antennas were at the bottom of the list, more than 6-dB. below the poorest of the others. The Hamstick measured 47.5-dB. and the Hustler 50.0. The others, all of which rated better, are larger and "uglier". The winner was W6KKT who used an antenna designed by K6ATP. It is made of a tubular vertical shaft with a relatively large diameter coil of few turns, mounted about 3/4 of the way to the top of the antenna. Above the top end of the shaft is a large top hat made of six stiff wires branching outward and upward from a small disk atop the shaft. The wires appear to angle upward at about a 30-degree angle from the horizontal. It measured 59.2-dB.

Excepting the two commercial models, all the custom-built antennas measured within 3-dB. of the winner.

Title>GI6:A Gift for Teaching
Author>Winter, Patty - N6BIS
Source>QST Sep 95, pp. 70-71
Abstract>How to use amateur radio in becoming an effective middle-school teacher.

Digest>Bob Maurais - KC1IV was given the Disney American Teacher award as the outstanding vocational/technical teacher of 1994. He teaches fifth, sixth, and eighth graders industrial arts and technology at Harrison Middle School in Yarmouth, Maine. He is both a private pilot and a ham, and uses both avocations in his teaching.

His success in teaching seems to stem largely from his immaginative use of projects which give the children experience in a variety of technologies and skills. One project under way at the time the article was written was a "boat race" run in two long, narrow troughs filled with water. Each trough has an electric fan at one end, blowing down the trough, to blow the racing "sailboats" down the course. The children must design and build their own boats. Doing so, they use technical drawing, geometry, computer-aided design, graphic arts, writing, and other subjects.

Bruce and other white men (I too am white),

The reason OMIK started is that years ago, many white hams ignored,
insulted, and badgered operators that they thought were black. More or
less, it forced black hams to group together with their own
organization.

You are right that racial groups today only serve to fragment our
society and contribute to racism. However, it is important to note
that OMIK membership is now open to hams of any color or race.

Don't balme them for starting a group years ago to insulate themselves
from a situation brought on by racist hams.

Regards,

Duffy - WB8NUT

Subject: Anguilla After LUIS

Please re-post, re-distribute this message as desired.

"Anguilla Perseveres"

Anguilla is pretty OK these days. The count of messages sent and received by members of the Anguilla Amateur Radio Society is almost at the 10,000 figure. 2 FLASH messages for the Government, 19 EMERGENCY precedence messages involving Life Safety; about 600 PRIORITY messages involving post hurricane restoration of services and emergency supplies shipments; and about 9,000 ROUTINE precendence messages were recorded by operators and their assistants during Hurricanes LUIS and MARILYN. Many of the messages were handled via the local 2-meter net, thanks to the quick thinking of Jimmy, VP2EDJ, setting up the net on the output of the VP2EA repeater and operating simplex until the repeater antenna was repaired. Vince, VP2EVC, acted as net control for much of the simplex net since his QTH is central to the other Amateur operators, he had solar and battery power, and an excellent portable J-Pole antenna made from 400-ohm ladder line.

Many thanks for all of the helping hands out there in the rest of the world: We gratefully extend our most sincere appreciation to The entire Lambda Amateur Radio Club (LARC) membership. Also, to Shep, AA7MH; Joe, W4EHW; Don, K0IND; Jerry, KF8EP; Scott KO8O/VP2EOH and XYL Jo; Ted, KR9O; Frank, KG4H; Tony, WA5ORS; Dave, N4ICE; Warren, WB1HBB; Bud, N4WRF; Terry, N4BWS; Arthur, 8P6AA; John, KA3DBN/VP2EBN; Murray, VE2AUU; John WC0W/VP2EO; Vega, J39GH; Carmello, AA2FN; Ray, K1WW; Dave, KE4AMW; Bill, W1BIS; and 4U1UN's "Shortwave" Susan Shepard.

Deserving special recognition are "The Sand Box Net" on 7.0635 Mhz, "Intercon/Maritime Mobile Service Net" on 14.300 Mhz, the UN Radio Readiness Group 4U1UN Net, and Mr. Paul Duffy of Tropical Shipping Company, Rivera Beach, FL. We know we were helped by many other stations but due to the emergency situation were not able to properly record their calls or names. None the less, you know who you are and we appreciate your help.

Anguilla's Amateur Radio Operators who worked their buns off are:

Larry Stott VP2EL, Cable and Wireless Engineer
Elrick Paul VP2EP, Master Electrician
Jimmy Willocks VP2EDJ, Master Cabinetmaker
Eustace Allen VP2MAE/VP2E, Commercial Manager
Robert Reiman VP2EBR, Businessperson
Edwin Harris VP2EEH, Customs Officer
Langford "Roger" Morton VP2EM, Customs Officer
Vincent Cate VP2EVC, Offshore Business Operations Manager
Dorothea Mann VP2EE, Retired Army
Dave Mann VP2EHF, Retired Army

Photographs:

We are going to scan some color photos into JPEG format and UUENCODE them for attachment and transmission to you. The job should be finished this week, there are about 20 photos taken right after LUIS. We will send them ASAP and try to keep the size down to less than about 22.5KB so only one UUENCODE file is needed for each photograph. The photos should give you a visual break from all of this print.

Many people have asked about donations and how to help. LARC has established a fund already ... here is a message from Jim, KK3K, about making donations:

>We will process the donations to Dave and Dorothea through the club
>Treasury so that we can keep an account and maybe even be in a position
>to purchase unspecified items and ship them should Dave & Dorothea
>request this..
>
>Accordingly, please send all $ donations to the club POB:
>
> LARC
> POB 24810

>
>Make your check payable to "LARC," and note on it: "VP2EE & VP2EHF Fund."
>
>161,
>
>Jim, KK3K

... and several aforementioned people have shipped boxes of needed items at great expense. You can't imagine how good a fresh "Heath" candy bar tastes after mopping up the last five inches of water in the kitchen. Self-help and Jollification (friends getting together to help each other) is the way to go here, and we have already participated and have been helped, and we are grateful, very grateful. Oh, Oh! yes and the fresh Candy Corn and Coffee Nips! Yes. Yes! YES!!!

Few people here are able to afford the thousands of dollars per year needed to pay for insurance against hurricanes. Our friends who have insurance have already experienced adjusters arriving and telling them that their house isn't really destroyed, it just doesn't have a roof any longer and

every thing is wet inside.

A large box of essentials, including powdered milk, t.p., canned corned beef, and other common items arrived from one of the other island Ham Radio Clubs. AARS members got together and separated the shipment up so each member could take something home for their families. A loaner radio arrived from Canada just as our Yaesu made it's last transmission. Two other shipments from the USA came with batteries and water purification tablets (and many other items) when there were no batteries left anywhere and we were boiling our water. Those batteries helped get flash lights and a couple of radios operating again for VP2EHF, VP2EE, VP2MAE/VP2E, VP2EDJ and VP2EP. The water purification tablets supplied a whole shift at the Emergency Center, the Immigration and Customs volunteers, and the Amateur Radio Society families. A multi-band dipole from Arizona put us back on 80 and 40 meters and the local Antillies Emergency and Weather Net. A data adaptor for the cell phone arrived from Connecticut just in time for the e-mail system to become partially responsive again. The list goes on, and every single item is appreciated and treasured.

Particularly appreciated because of the thoughtfulness and alacrity which went into purchase and shipment.

And then, WC0W/VP2EO, John Patterson, managed to break through the pile up on VP2EE and said "I'll be there next week". John got the Pro-67 repaired, two generators working and wired, a tower disassembled, a rotor working, three destroyed antennas out of the bush and replaced the tower crank up winch which was hanging by a single bolt with no head. And a lot of other stuff we lost count of ... all in four and one half days. Superman was here!

Now, we need to plan and supply for future events, for continuity and a robust AARS emergency capability.

AARS members are putting serious thoughts into sponsoring a conference and seminar here at one of the hotels. The conference and seminar would be dedicated to Amateur Radio and Emergency Preparedness. We believe that special rates could be had from local resorts and rental car companies, and that perhaps even some manufacturers and UN and USA/UK Disaster Officials would want to attend. Certainly lots of hams might want to come down too, particularly if we hold the seminar when it is snowing in Boston. Please comment accordingly on what you think about a seminar and conference here in Anguilla covering Amateur Radio Support during disasters.

Specific to the Anguilla Amateur Radio Society (AARS), here are some thoughts and ideas we have had about getting Amateur Radio back on its feet in VP2E land. Members of the Anguilla Amateur Radio Society met and discussed at great length what we would need to prepare for the next disaster and have good training capability for new hams now in the pipeline.

1. E-Mail and Packet capability seems to be a pretty high priority. Local hams want to be able to find inexpensive lap tops and TNC's that will operate on battery power and with which they can connect to a local packet node.

a. Because of Anguilla's location, it is extremely difficult to have reliable packet connections with KP4, KP2, or V44. We have tried each of these paths in the past, using 10 elements and 100 watts and received marginal results. Trying to relay large amounts of traffic from the USA or "All@WORLD" is only about 30 per cent effective due to the path losses and unreliability of distant end stations. So, direct contact with stations on other islands operating HF packet or PACSAT gateways is not feasible.

b. Members opine that with PACSAT capability, The AARS VP2EA PBBS (not working at this time) could act as a PACSAT gateway and then forward via VHF to relay stations on St Eustatius, St Maarten and St Kitts. The off-island stations would be able to connect to the VP2EA PBBS when they want to and collect their traffic with VP2EA. We would NOT have to set up special considerations for them, other than some directional antennas which we already have on site. It is probable that we could arrange connection of the Internet to our system so we might have an Internet to Amateur Radio gateway.

c. This concept of using packet will solve the problem of voice relay of local messages between Shelters, Hospital, Police and Disaster centers, which really clogged up the VP2EA voice repeater and 2 simplex channels. An after-action review of the bits and pieces of paper with messages on them that were floating around the VP2EOC (Airport Emergency Centre) showed that after the initial issue of 10 ARRL message pads were exhausted, legibility and intellegibility of messages became less and less. Attempting to get a list of boat's names QSL'ed when there are hundreds of names, many of which are only partially known or in a foreign language was disheartening.

d. Since we did have several hams with 2-meter capability, they walked around the various villages after the storm surveying damages and relaying messages to the EOC. VP2EP, VP2EDJ and VP2MAE/VP2E were out carrying their 2-metre HT's and walking through their villages even before the trees stopped falling, reporting on damages, injuries and emergencies. If there was a packet capability we could have gotten those reports by voice and sent printed text to the EOC in near-real-time. What would have been very helpful would have been pre-printed Health and Welfare forms or an electronic version running on a laptop that could send messages back by packet.

2. AARS already has a working 286 laptop computer (well sort of working, but it can be fixed) which can be used with a packet controller and NETROM or THENET firmware. This would give local operators a Node and gateway access. This means that during an emergency, each Amateur Radio operator could set up in the area nearest the road and receive visiting people from the village who needed to send a Health and Welfare Message. This would have permitted many people to avoid rushing to Cable and Wireless and paying for an exploitively expensive INMARSAT telephone call to say the same thing. When evacuees were arriving from Montserrat after the volcanic eruption there (just before LUIS), they were amazed that AARS members could provide an instant Health and Welfare message back to their island, advising that they arrived OK. They were astonished when they were told it was free of

cost and a Public Service Contribution, since they expected to pay the prevailing outrageous Cable and Wireless telephone rates.

a. When we had an operating VP2EA PBBS on 2 meters it worked pretty OK and we sometimes had more than 250 messages per day pass through the system. Weak points included the marginal path between KP4 and VP2E, frequent equipment failures due to pushing the RF to the max, and high cost of equipment and repairs.

b. The AEA ST-1 Satellite tracker stunt box looks like it might be a good turnkey device for rotor control. (Any comments, advice, present user observations????) It appears this would need to be operated with a 386 or faster laptop that has appropriate sized hard drive and ports (which we don't have).

c. Either the IC-970, TS-790 or IC-475/275 radio combination seems to be the equipment of choice for the PACSAT system.

d. We have a 2-meter GasFet preamplifier from Microwave Modules which could be used as part of the system.

e. We have a Cushcraft 70 cm OSCAR antenna.

f. We have most of the parts left from a Cushcraft 2 meter 10 element OSCAR antenna.

g. We have the horizontal aluminum support mast that goes between the 70cm and the 2 meter beams and the az-el rotor.

h. We have loads of hard line and connectors.

i. We have a Ken-Pro elevation rotor but don't know if it will work, based upon software and hardware that is used with it for PACSAT and other OSCAR.

j. We think that the AEA PK-96 Packet Controller would work for the PACSAT station. Also, we would need 2 additional PK-96's to set up the VP2E ends of the circuits outward to the other islands.

k. The AARS would like to obtain the SWR-121 and SWR-121V/U antenna analyzers from AEA, they would simplify building antennas AND be a great teaching tool for our class room instruction for new hams and at the local technical school classes in electronics.

l. AARS would need at least one set of books, FAQ and instructions on PACSAT for the ground station, plus preferable a second set to be used for class room instruction.

4. HF Capability: The AARS has several HF antennas which have been donated over the years and which are in relatively good condition or which can be repaired. All of the antennas at the VP2EQ station were destroyed (10 meter monobander, Tribander, rotor, dipoles) Factory repairs are needed on the following radios, all of which are "casualties" of Hurricane LUIS, and which are property of the VP2EQ Boy Scouts and Girl Guides Station and the AARS:

a. Kenwood TS-520, heavy water damage, tubes smashed, top dented;

b. ICOM IC-701, circuit board short and great clouds of smoke;

c. Dentron HF amplifier, water damage, corrosion, file cabinet fell on it and knocked it to floor;

d. Yaesu FT-101ee with VFO, water damage, no sensitivity, finals gone, smashed switches on front panel;

If the three radios could be restored, we could get VP2EP, VP2EDJ and VP2MAE/VP2E back on the air with dipoles and some locally built mono-banders.

e. Also, there are two Collins 30L1 table top amplifiers that require repair (they have new tubes, but have relay problems and one has broken safety interlocks and bad power cables). These belong to VP2EE and VP2EHF, but if they can be repaired, one will be donated to the AARS equipment bank. They all have new 811A finals (thank you W1HEO, and LCARA VP2EOH Group!)

g. There is a Yaesu FT-757GX which is totally dead, plus having been knocked off of a temporary operating bench when the wind blew a window panel inward. It rattles when shaken lightly.

h. There is a Yaesu FT-757GX Mk II which is operating intermittently, after cw or ssb operation for a few seconds, the display blanks out and it loses power. Had been operated on a fluctuating power supply and old 500 watt generator.

i. There is a Kenwood TS-830S, the final amplifier board of which is now cinders and ashes. Died during normal service, several repair trips to the USA, then resurrected after LUIS then died again with much smoke and noise.

j. There are four Ham IV rotors which are damaged due to salt water and crashing to the ground, two belong to VP2EHF and two are AARS property.

3. Some recent donations prior to Hurricane LUIS arriving:

a. We (VP2EE and VP2EHF) donated the following to local Amateurs and the AARS (and this equipment is all in use even as we write this message):

1. Three Icom IC2AT hand held transceivers;

2. Three commercial gelcell pack battery adaptors for IC2AT

3. Two 43 watt Kyocera solar panels, commercial size;

4. Three 25AH gelcell batteries.

5. Two Icom IC-25, 2 meter mobile radios

6. Two Antenna Specialist ASP1450 5/8 mobile whips.

7. Three Astron 12 volt to 110 volt power inverters.

8. Several dipoles and lengths of coaxial cable sets.

9. Three Phillips/Pye 5-watt 100 channel VHF HT's

10. Cushcraft Ringo Rangers for 2 meters

11. Various odds and ends

b. We are collecting bits and pieces of antennas and feed lines so as to divy up the parts to the AARS guys and gals. We are planning a mono-bander building party, would you believe!

c. It must be understood that with the exception of three VP2E hams, the other members of the AARS mentioned in this message are starting from virtual scratch and richly deserve our support and assistance.

d. The schedule for classroom instruction for new hams will continue, we think now starting in December. There have been many inquiries about studying and receiving a license.

e. We originally sent a message right after LUIS hit us, addressed to the AMSAT organization and ARRL, asking for advice and assistance about the PACSAT and getting message pads and operating aid cards and so forth. Thus far we have received no replies, so if anyone has an excess of traffic handling supplies, we can use all you have. Also operating aids such as phonetic alphabet cards and ARRL number radiogram keys.

f. The AARS Treasury presently has about 300 US dollars in it and we are expecting to collect some more dues and money from sale of AARS Club hats, so we might be able to match donations up to about US 300 (subject to a vote of the membership).

g. We need someone in the US who could act as the equipment repair liaison person, so we could ship all the stuff to be repaired and have a USA representative deal with the Manufacturer's service centers, then arrange for shipment back to the AARS. Based upon some terrible experiences we no longer trust repair shops at EEB, Vienna, VA, International Radio and Computers and Fox Tango International, in FL.

h. Members of LARC have volunteers to receive and consolidate shipments of items from various vendors and people who make donations. Vendors and Donors could use UPS to LARC's designated address. Then the LARC person could make a consolidated shipment by UPS to the Tropical Shipping Company in Florida. This will help greatly, since Tropical's minimum shipment cost is 70US by cubic foot size of the package, not by weight.

Here are some questions and requests for items which could be used by the AARS for fund raising and community service activities:

If anyone has hands-on experience with PACSAT and operating a PACSAT gateway station, perhaps they could devote some time to teaching us how to do it. We have seen the NPGS Web Page on their station ... is it REALLY that simple? Remember, this has to work in the tropics.

If anyone has had hands-on experience operating an Internet to Packet gateway station using the FBB packet BBS software, perhaps they could advise us.

If anyone can arrange the donation of laptop computers and vhf TNC's for packet it would be helpful. One idea raised at the club meeting was to equip hams with a waterproof carrying case, a laptop and portable ink jet printer, 12-volt dc adaptors, a TNC, a 2-meter rig and a portable j-pole antenna. Hams so equipped could then be deployed to various places on the island during exercises and disasters and become mini-data centers linked to the VP2EOC emergency centre PBBS. A side benefit of this donation would be that the families of those ham operators would gain access to the internet and have a computer for school work, thus insuring a generation of Anguillians as computer literates.

If anyone has experience using G-Tor and a KAM and a Collins KWM2, for traffic handling through a BBS on HF, we might be able to get that started real soon. The only question is "does the relay on the Collins KWM2 move fast enough", and how to hook the KAM up to the Collins. We could get a G-TOR BBS on the air in a matter of hours if there is a way to make the Collins work with it. Someone said there are electronic relays for the Collins that speed things up. We tried a variety of settings on the Collins VOX and nothing worked fast enough for the KAM.

If anyone knows of any software for Windows that does disaster traffic (Health and Welfare messages, ARRL Traffic Handling, keeping track of people, places and things) we would appreciate knowing about it. We were told by Newington that ARRL has such, but our message to them came back with the comment "check our bulletin board" ... not without telephones; but thank you very much for the offer, ARRL.

If anyone knows of ANY ham radio software that will run under OS2/Warp, we have one very brave soul here who is still trying to get Warp to work and won't give up. He is not yet a ham but is interested.

The AARS has been offered the use of a piece of Government land where we could erect a repeater tower and have a shelter for equipment. If anyone knows about a cement block making form please let us know. Blocks cost 1.75 US each, here, and we might be able to make our own cheaper.

Some simple morse code oscillator kits with hand keys to support ham radio license class instruction. Would be great.

Surplus test equipment, dummy loads, watt meters, power supplies and common electronic tools, to equip the Boy Scouts and Girl Guides station where classes will be presented. Club members could work on their equipment there also. We need the books and instructional material that goes along with the gear, too.

The AARS is looking for a portable gasoline or electric powered air compressor for powering air tools and pressure washing, we can use it in community service and fund raising. Same goes for a steam cleaner and used air tools and hoses.

The AARS needs some kind of two wheeled trailer upon which a small generator and some tower sections could be set up. This could form the basis for a portable VHF/HF station. Anyone know of an old military surplus fold-over, crank up tower for lights and/or antennas? AARS wants to get ready for

Field Day now, not next year.

The AARS needs a 220 volt light duty portable Arc welder that can be powered from the 220 volt, 30 amp outlet of a generator. We need full instructions and various rods and fluxes. If it has a cutting attachment that would be even better. This would be used in community service and fund raising.

The AARS needs a gasoline powered chain saw in good condition with sharpening tools and instructions and safety equipment. Maximum diameter to be cut would be about 6 inches and the occasional telephone pole across the road.

The AARS needs those old egg insulators and dipole center connectors that are hanging around the junk box. Also, 400 ohm ladder line. We have wire.

The AARS needs some BNC connectors for the business end of the J-pole antennas we are making out of the 400 ohm ladder line.

The AARS will be able to import donated items free of the usual 25 percent duty, but donations need to be coordinated first.

Any assistance will be appreciated. We are looking forward to your advice and comments.

Our very Warmest regards to all,

Dorothea Mann VP2EE

Just so's you know, any mods to the HTX-202 to extend receive capabillities involve reprogramming an eprom; it was designed not to be modified. There was a nasty "April Fool" mod listed at one time for it, but all it does is ruin the radio.

BTW, if someone pays you $5 for this info, then smokes their radio, they could probably come after you with lawyer in tow.

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
October 15th, 1995
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

Oh yeah...of course I realize that this is a "bootlegger", but is he properly termed a bootleg CB'ER? If the illegal operator is using a modified 10-meter ham transceiver (quite common on 27.555), wouldn't they be called a bootleg ham operator instead?

I think you are referring to 'Guest Ops'. I have a couple of friends who are no-code techs, and a few others who aren't licensed at all who do this. They enjoy doing a bit of HF SSB when they are here. The rules permit it if I am present to ensure everything they are doing is kosher. I don't see whats bad about it, in fact I think its rather nice.

Who is Burt Fisher? or perhaps how many Burt Fishers are there? There are two posts in this thread supposedly from Burt that appear to be from two different people or personalities. One Burt seems to be a rational caring individual who accepts people (hams included) on their individual merits and the other Burt seems to be dien cau dau (literally translated this means 'off the wall'). Is there someone that has access to Burt's terminal/work station and is intent on making him look like the net jester? I would filter the Burts out but one Burt makes me chuckle and the other makes me wonder about the former.

Duffy,

While I agree with your concerns it would still seem counterproductive to the cause to continue with a group whose time has past. Perhaps merging OMIK with the ARRL would be a better choice, or clearly state that the group is open to all. OMIK still has the association as a "minority" group, clearly the days of needing such a group have past. It's time we work together rather than apart.

Ah jeez...Drew, go tell Mom yer diaper is full again!

Serious communicators? I dont think so. Wannabees and wimps that cant pass
a lousy 5 WPM test and are too stupid/stubborn to even try is more like it!

These people are unlicensed for those frequencies, that makes them bootleggers,
and scum. The idiots on 20m are mostly licensed operators who are violating
various rules regarding interference, not the same category of violation...
..and yes, some of them are scum too!

This is not a loop hole in part 97. The rules have been that way for at
least 20 years. It's not just no coders that operate on HF, VHF or
anywhere else with a licensed ham present, it's anyone, licensed or not.
Before commenting on the rules, maybe you should try reading them. It
would certainly lower your dipshit quotient.
If you weren't so myopic, you might be able to see a very good reason
for those "loop holes." Back in the old days, one way to get someone
interested in ham radio was to bring them over to your house, show them
the ropes and then let them talk a bit. That's how I was introduced to the
hobby and I'm sure thousands of others were, too. I got my (code included)
tech license about two months later.
Get thee a rule book. And STUDY it. I'm told this is a terrific way to learn.

Hmmm...this is a pretty broad-blanket statement, don't you think?
Believe it or not, there are actually some serious communicators on these
frequencies who moved "up there" to get away from all the idiots on the
lower 40. Most of these folks would love to be licensed ham operators,
but don't wish to waste their time learning the antiquated Morse code.

By your logic, all 20-meter amateurs must be "scum" since there is lots
of garbage on 14.313Mhz, right?

: -Drew in Charlotte-
: KF4DDM

Really?? Do you just make these things up, Drew? Everyone around
here who has encouraged people (including "CBers") to get into Amateur
Radio are quite helpful and encouraging. I suspect that those who have
no respect for Technicians *now* have *never* "begged and pleaded with
these folks to give up their CB's...and get a ham license". Rather
quite the opposite. By the way, if you'll re-read my post, I said we
chastised the fellow for saying he was "*just* a no-code Tech"...a
rather self deprecating comment. He is a full-fledged ham trying to
upgrade and there was no need for him to be ashamed of being a "just" a
"no-code" Tech.

There are lots of *real* things in the world to be "amazed" with, and
lots of *real* things to be disgusted with. Why burden yourself with
illusions?

>You are correct so far, if you choose to see it that way; we do feel
>that QST magazine is a reason for people to join ARRL.

If this were really true, Ed, then QST wouldn't be available on the newsstands. Face it: The ARRL is a publishing house. It has been for some time.

When are we going for ribs again?

>Unfortunately, ARRL cannot be blamed for those who choose to view their
>Membership as only a subscription.

But the ARRL should realize that many people are ARRL members simply for the magazine subscription, not because they want to be members of the ARRL. If you offered a magazine subscription rate equal to or less than what "members" pay, I bet you would have alot of people who signed up just for the subscription, and not to be a member.

Although I'm not a big supporter of anecdotal evidence, I have had way too many people say this to me for it to be a coincidence. A measureable portion of League members/QST subscribers feel this way. What that portion is, I don't know, but based on my anecdotal evidence I'd wager its a decent size.

>That is why I have joined; that is why I work here.

The only reason I'm a member is so you can't turn me down when I ask you to come to RI and give another talk :-)

>I have heard a few who want a Membership only option, but you are truly
>the only one who has, to my knowledge, ever proposed a magazine-only
>option. I suspect that there would be darn few who would take the
>option. Why would one want to shut one's self off from the potential of
>using any of the ARRL benefits and services?

It all depends on how you structure these options. Some people have said that making QST available on the newstand means that the ARRL is addressing the concerns of people who want to get the magazine without being a member.

Unfortunately, they don't take into account the price difference between being a "member" and getting a "free" subscription to going out and paying a premium in both time and money (my time is worth money, after all) to get the magazine. Instead, it makes sense all around to

simply "subscribe" to the magazine by sending in your $31 dues to Newington.

For that reason alone, I totally dismiss any argument the League makes when referring to the newsstand distribution of QST. I further see the newsstand distribution of QST targetting an entirely different audience: people who want to see what's in the magazine before they buy it, and when they do buy it, they buy it irregularly. They're just as apt to buy CQ or 73 or any other ham radio publication on any given month, depending on whether or not the topics interest them. If they want a copy of QST every month, chances are they're just going to "subscribe".

The League should consider a "magazine only" subscription, and make it competitively priced (i.e. cost less than) a "membership w/ free magazine subscription". I bet they would really be surprised.

But the League won't do that, because it wouldn't further their self-serving legacy of overinflating their amateur representation numbers so they can claim to be the "voice of amateur radio" in the US.

C'mon, Greg, admit that Drew has us all figured out. The old
license-class bait-and-switch. The only part he forgot to mention is
that we get extra points if we can then sell the new ham a piece of
junk (WW-2 era IFF units and retired marine AM sets are good for this)
for his "first rig".

Seriously, has there ever been a new ham who was so contemptuous of
such a large part of ham radio, and so many of his fellow hams?

When I worked at RS many, many years ago, we were evaluated on the number of names and addresses on the receipts. Everyone knows that RS uses these for their advertising/mailing campaigns.

Anyway, we had a customer that was about our own age (teen) that used to come into the store all the time and purchase parts. We became good friends. He came in so often that we two salesmen memorized his address. When a customer came in that did not want to give his name and address, or when we were too lazy to ask, we used to write a ficticous (sp?) name with our friend's address on the store/company copy of the receipt.

We did this so often that when the monthly flyer was mailed out, our friend Carl received over 75 flyers in the mail! The mailman used to bitch at him for having to lugg all this stuff around his route.

So if you want to have some fun, every time you go into RS and you are not buying something that needs a warranty like little parts and wire, etc., give them a false name with your real address. See how many flyers you can get in the mail. Maybe you can beat Carl's record!

Anybody got an ftp or www site for a nationwide repeater directory?
I'm driving from Chicago to Sacramento on Monday, and my '91 book is a
little out of date.

Failing that, does anybody have a favorite ham store in the southwest
Chicago 'burbs or between Brookfield and Racine where I can buy a new
directory? Open on Saturday?

Thanks, gang.

>with his head up his ass in the first place...

Well, so much for your "friendly" neighborhood cop. And would you
ignore constitutional protections (e.g. 4th) and jump over a fence to
"save" the prime suspect of a crime? How about beating the crap out
of a guy for speeding? What about a woman who is holding an "assault
baby"? My favorite is to torch children to save them from child
abuse. Less well known is the police officer in NJ who would pull
people over to rob them. Remember, when police as individuals start
disrespecting the people they are assigned to protect, the police as a
group become despised. Small tyrannies by individual officers make
the entire profession into a bunch of pigs.

>Please your views also. Thanks Lynn

Lynn,

I am an employee at a local Radio Shack store. And yes, we do ask for your name and address. And yes, it does show up on the employee's sales ledger. However, the names are not just used for mailings. We use the names for returns/exchanges so we know it is a legitimate return, we use names for repairs, and we use names to look up receipts on the computer if a customer lost their receipt and needs it for some reason.

I know asking your name can be annoying sometimes, especially at several different stores. I wish that at least the local stores would tie their name databases together so that if you are in the computer at one store, we can look it up at my store. I have had numerous complaints saying "But I'm in another store's computer already!" From what I have heard though, a linked database would cost us more money per sale, and this would lead to higher prices.

Lynn, we also respect your privacy. If you don't want to give your name for small items, that's fine. However, for returns/exchanges, repairs, and to look up receipts, we need your name. For instance, if you dropped off an item for repair, how would we reach you when the repair is complete?

Radio Shack is not the only store that asks for your name. Micro Center does it, Incredible Universe does it, (in fact, they require a special ID card to even enter the store!), and the local ham radio store does it too.

That's my view on this subject, the view of a Radio Shack employee, and a ham.

* COMET HEADED FOR BRIGHT ENCOUNTER *
====================================
A very unusual comet was discovered on 23-Jul-95, on its way from the outer
reaches of the solar system towards the Sun. Although it is still situated
beyond the orbit of Jupiter, it is so bright that it can be observed in even
small telescopes. It has been named `Hale-Bopp' after the discoverers and
is already of great interest to cometary astronomers.

The comet is expected to pass about 120 million kilometres from Jupiter in
April 1996, and it will approach the Sun to about 140 million kilometres
when it passes perihelion in early April 1997. At the time of perihelion,
the comet's geocentric distance will be about 200 million kilometres, the
angular distance (`elongation') in the sky from the Sun about 45 degrees
and it will be located in the northern sky at declination +45 degrees.
It will actually by `circumpolar' in Northern Europe and therefore well
observable all night from there.

One possible cause for the unusual brightness of Comet Hale-Bopp at its
present location, more than 200 million kilometres outside the orbit of
Jupiter, is that it possesses a very large nucleus, that is the `dirty
snowball' of dust and ice at the centre of a comet. The larger the
diameter of the nucleus, the more sunlight will be reflected from its
surface and the brighter will it appear. A corresponding estimate
indicates that the diameter of its nucleus would be nearly 100
kilometres, as compared to about 10 kilometres for Comet Halley.

If the orbital period is near 3000 years, the brightness near perihelion in April 1997 could reach magnitude -1.5. This means that Comet Hale-Bopp would become almost as bright as Jupiter which will also be visible in the night sky at that time.

What is even more exciting, the comet would stay this bright during several weeks and be visible from the Northern hemisphere during many hours each night. It will even be above the horizon all night for observers located north of geographic latitude 45 degrees. Thus, in addition to providing a wonderful opportunity to astronomers for learning more about comets, Hale-Bopp may become an object of great public interest. This is especially so, because it is now almost 20 years since a comet has been this bright. The last one (Comet 1976 VI - which was discovered at ESO) attained this magnitude during a few days in early March 1976.

At the present time, Comet Hale-Bopp is located in the southern constellation of Sagittarius and it is very well placed for observations from southern observatories. Irrespective of its performance later on, the unusual brightness at the present heliocentric distance already makes it a very interesting object for astronomers.

Because of its unusual brightness, and in order to follow the future evolution of Comet Hale-Bopp, coordinated observations at La Silla are now being planned for the next several months. Thereafter, the comet will move behind the Sun as seen from the Earth and observations with the large telescopes will only become possible again in March 1996. There is no doubt, however, that from then on, its further development will be followed with great care by the observers. Better predictions for its brightness near perihelion will also become available.

572. QSLs from HI8 - Any luck?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-11 00:00:00 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <45gs3s$7r1@reznor.larc.nasa.gov>
Source record: 237069

Despite contacting the Dominican Republic on numerous occasions
over the last 4 years, I've had no success in getting a QSL card
from any operator on the island. I've tried many cards via the
bureau and a number direct with IRCs or green stamps to well-known
operators at their callbook addresses. To date, I still have received
no response to any attempts.
I've also tried to qsl HI8A (JA5DQH) who was very active in HI8 during
1991 via the JA bureau and to his callbook address in Japan on a couple
of occasions, again with no success.
Has anyone had recent success with receiving QSLs from the Dominican
Republic either direct or via the bureau. Is there a mail pilfering
problem in the country? Might registered mail help?
Thanks for any help.

During the 1970's, a new sequence of band definitions was devised for
ECM equipment. This sequence ran consecutively from A to M. They tried
to apply these designations to radars, however the junctions of the new bands
fell right in the middle of the established radar bands. For example, the
old C band was neatly split by the new G and H bands. So, the new designations
are mostly used only for ECM. Specifically, D band is 1-2 GHz, same as
the L band radar.

Greetings,

I find this type of attitude interesting. Recently, I acquired my Tech license. Being a brand new ham (at 35 no less) I was a bit intimidated when I purchased my first radio and wanted to make sure I was operating properly and courteously (gee... just like a real ham... imagine). Since I've been a computer tech for over 10 years and an early bbs and Internet treader, it seemed logical for me to post my questions to rec.radio.amateur. The questions I posted were reasonable ones (refer to: Now I've got a radio AND a million questions). I was deluged with many thoughtful responses that gave me the courage and knowlege to key the mike and make a first contact like I'd been doing it for years.

There was however the one "ham" who took time out of his busy day to send me a brief note asking "How did you get your license?"

He seems to be expressing the same sentiments that you, and others like you have been gleefully expounding. This attitude of "How dare you enter *MY* hobby with less knowlege than *I* feel you should have. *I* was born with a radio in *MY* hand so don't petition *ME* with any questions. Accept only that *I* know something that you don't (and don't expect *ME* to share because *I* EARNED what *I* know).

It won't be the No-Code Tech ticket that kills amateur radio, it will be attitudes that cut off a complete class of newcomer.... attitudes like yours.
I'm fully aware though that attitudes like yours are not as common as the sound level would imply. In my short two months as a Ham, I've encountered many experienced fellow Hams who are eager to share with me information that enriches and explains my new hobby. I've only met a few that take time out of their busy day to whine, malign and complain. What a sad waste of energy.

May I suggest that in the future, if you encounter a Ham who is green that you might enrich both of your lives if you took a few minutes to attempt to fill in the gaps in his knowlege. If (s)he is in this hobby to learn then you will have given them a valuable insight and if not at least you've done no harm.

You're making the assumption that one needs a license to be a serious communicator. This is not necessarily true. A piece of paper from the government does not a proficient operator make, nor does the lack of one automatically make the operator "scum."

I'm wondering if/when the wording of the rules was changed. I read the above to indicate that the word PRIMARY has been dropped from the rules. Is this true? I haven't read them in depth for awhile. It used to read that PRIMARY control had to be maintained by local, auxiliary, etc. For many years we have operated on the basis that there is a licensed operator available at the remote location 24 hours a day, who can be contacted for control purposes, if needed. On that basis, 2m only frequencies have been used for many things. The mobile/remote station can control all he wants, but the local operator is available as PRIMARY control if something goes wrong. The point being, if the device, whatever it is, is located where there is a license operator on the premises, it should be okay. If the wife and kids all have tickets and one or more of them are at home, there would be a control operator present. If the device was located at a manned facility (tv station, etc), where there were other hams available, it should be okay. The point in the law being that someone is reachable to pull the plug, should a problem arise to require it.

How do you read this, Gary?

I have a '92 GMC pickup and am getting rfi also. I have a tach in mine. The wire coming from the distributor is not shielded and is causing the most interference. I have tried inserting a .05mf capacitor (ones designed for auto ignitions) from R.S, with limited success. The problem is worse on hf than on fm.

Someone suggested that the fuel pump may be the culprit. I haven't had time to explore. The QST article you reference didn't list GM with a number or address if I remember. I no longer have the copy.

If you can find out anything else, drop me line.

585. DL0ART/am - 3rd launch

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-12 00:00:00 UTC
From: Oliver Welp <welp@uni-muenster.de>
Message-ID: <45hmbr$1doe@majestix.uni-muenster.de>
Source record: 236938

DL0ART/am -
The Nienberge Amateur Radio Group (Germany) performed its third
balloon launch on sunday, 08-Oct-95.

This time, Murphy really hit us...
We announced a transponder (70 cm -> 2 m) would be part of the
payload. We thought so till some hours before launch, but had to
find out what the deepest meaning of the word intermodulation is. We
mainly blame the telemetry transmitter for that, but we decided that
having that one aboard is a bit more important than a transponder...
So we have to appoligize if anyone looked desperately for the signal
and didn't find it - folks, your equipment is fine (get it out of
the garbage can again!) - the signal simply wasn't there.

We hope having the payload (including tha transponder) working
flawlessly till the next launch (whenever that will be).

Links to reports about the first two launches can be found at URL:
http://www.usa.net/~rickvg/othgrp/othnews.htm

ARTOB launch 08-Oct-95:

Launch: # 3
Launch date: 08-Oct-95
Launch time: 1211 UTC
Launch site: Nienberge near Muenster, NW Germany, JO32SA

Payload DL0ART/am:
QRG/mod.: (1) Telemetry beacon: 145,200 MHz F2D & F2A
(2) 2nd beacon: 144.991 MHz F1A (call & info text)
(3) Transponder cancelled - sorry!
(4) RX for remote control on 70 cm and 10 m (not used)
Power: (1) 2 W
(2) 100 mW
(3) ---
Antennas: (1) groundplane
(2) turnstile
(3) big wheel for 2 m used to attach the parachute /
70 cm cancelled
(4) 70 cm: groundplane / 10 m: lambda/2 vertical
Power supply: (1) & (4): 5 D cells LiSO2 in series (=14.4 V, 6 Ah)
(2) 1 D cell LiSO2 (3 V) and step-up to 9 V
Diameter ballon: ca. 8.5 ft
Gas: hydrogen
Parachute: ca. 6 ft
Weight: 4005 g (over all)

Lift rate: ca. 300 g

Talk back of DF teams via repeater Muenster, DB0PD (R84).

(UTC)
10:30 ARTOB team meets at Armin's QTH
11:20 arrival of launch site
11:30 filling the balloon
11.55 phone call to DFS (= German FAA)
12:00 airport Muenster-Osnabrueck (FMO) called; in case we happen
to get into their inner control zone we're allowed to pass at
a minimum altitude of 30,000 ft (!)
12:05 final testing of gaz valve
12:11 LAUNCH
The balloon lifts steadily and drifts to N/NE (35 deg)
12:22 altitude 4,500 ft, rate of ascend (ROA) 475 ft/min.
12:28 altitude 7,575 ft,
first opening of gaz valve (1 min.);
ROA 215 ft/min thereafter
12:30 second opening of gaz valve (1 min.); ROA 180 ft/min.
12:35 third opening of gaz valve; when trying to close it this does
not. The volve remains opened till the end of the flight.
12:38 max. altitude: 10,050 ft
12:54 altitude 6,175 ft, rate of descend (ROD) 300 ft/min.
13:10 Touchdown of balloon. Some DF teams lose signal
13:40 balloon found by Oliver, DL9QJ, and Ludger, DL3YBO.

Tochdown site: "Kattenvenner Moor" (JO32WC), 10 miles E of Greven
Touchdown distance: 13.5 miles

max min
Altitude: 240 ft 10,050 ft
Temp. (outside) 3.1° C 24.7° C
Temp. (inside) 26.9° C 31.5° C
Voltage 14.29 V 14.35 V

The positive thing was that (after we found the signal again) the
DFing was easy: simply go straight ahead as long as signal on the HT
(vertical car antenna) increases; when it's strong enough, just hit
the brakes and find yourself in a distance o 5 ft from the balloon!
Indeed, it was attached to a fence next to a small rural road -
never forget the confused cows on the other side of the fence...

We had many responses (reports) via PR (someone put us into the DX
cluster) - and obviously, the beacons could even be heard in the UK
(grid JO02)!

We were not too delighted that again (just like the first flight)
the balloon came down too early because of a malfunction of the
valve (and not even being the same flaw). We'll anyway redesign the
valve till the next launch.

The DF coordinating has to be improved - we also found that giving bearings every 10 min. is to much for the teams - you simply do not make enough miles in case the balloon would be faster. We scheduled "must" bearings for xx:00, xx:20 and xx:40 h - and many teams dropped the (voluntarily) ones at xx:10, xx:30 and xx:50 h. But only one or two bearings would help the coordinating team - so we'll probably change to a xx:00 / xx:15 / xx:30 / xx:45 h schedule.
The driving directions of the control team were poor - yes, this time, they had to do everything manually - no help of the PC program (because not enough notebooks available).

If you heard our sigs, pse send QSL via PR / Internet / buro - all will be answered with our DL0ART/am QSL cards! Any suggestion or response is always welcome!

Not to disagree, but I personally find it unproductive. I have
200 countries confirmed now, and find it is better to listen on HF, or
better even, to follow the DX Packet Cluster on VHF. The chances of
someone in a _new_ country hearing me and deciding to QSO with
a common-as-dust US ham are pretty small.

By DXer, I take it that you just like the distance, and not the
wallpaper. I chase the wallpaper. Like you said, there are plenty
of goals and options!

I think you are basically confused, so I'll help you out. This is a group that discusses amateur radio topics. It isn't a group that you dump into whenever you feel you must refuel emotionally.

All of your posts are emotional, and void of content that the group can discuss. Might I suggest maybe, some professional counseling? I'm serious. You are demonstrating severe emotional problems, and to continue on without help, will be unhealthy, and even dangerous.

My professional advice, is to unsubscribe, seek a mental health professional, and get into group therapy right away.

I have heard that ICOM accessories for the IC02AT are compatible with Radio Shack's HTX 202. I want to get better batteries and a rapid charger. I have looked at different companies and I have a couple of questions about interchangibility. Someone told me that the BP8 battery will work with the 202, and the BP7 won't. Is that true? Has anyone tried to use a BP5 (10.8 vt) or any other batter with voltage higher than 8.4vt on a HTX 202?

Thanks in advance,

590. GB2RS News 15th October 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-12 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <813550420snx@llondel.demon.co.uk>
Source record: 236943
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 15th of October and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First this week's headlines:-

The Leicester Show takes place on Friday and Saturday,

Jamboree on the Air is held next weekend,

And we have advice to anyone who should find a radio jamming device.

Recent press reports have referred to an amateur radio jamming device that was booby trapped. These were based on a press release from the Thames Valley Police which reads as follows:

"On the 19th of September 1995 a radio jamming device was found in the Brill area, Buckinghamshire. This had been placed there by an anti radio ham group in order to interfere with radio ham transmissions. Subsequent examination has shown the jammer to have an improvised explosive device attached to it of an anti-tamper type which should have detonated when the jammer was moved. Fortunately it did not. The device itself is a plastic box, the size of a burglar alarm box. This part may be out of view, buried underground or in bushes. There are wires leading from it to an antenna which is plastic tubing half an inch in diameter and about three feet long, similar looking to conduit. The explosive device is a maroon, or flare, which is attached to the box. If it detonates it is capable of causing serious injury. Information has been received that there is at least one other such device in the Aylesbury area. The public are warned not to tamper with any device which they may come across and immediately contact the police."

The RSGB Repeater Management Group states that the jamming devices can be recognised on air by the fact that they play various pre-recorded messages on a random basis at regular intervals. These messages are usually of an abusive nature, but are sometimes tunes. If anyone hears one they should note down as much information as possible and pass it to their local repeater keeper. It would also be useful to copy it to RSGB HQ marked 'urgent - for the attention of RMG'.

If anyone wishes to assist in DFing these devices then they should contact their local repeater keeper so that their efforts can be co-ordinated along with those of others. Finally we must emphasise that these devices are dangerous and anyone finding one must not touch it, but should report it immediately to the local police.

RSGB Headquarters in Potters Bar is usually open on the third Saturday of each month. However, this month - so as not to clash with the Leicester show - HQ was open on Saturday the 14th of October and will not be open on the 21st. Next month, headquarters will be open as usual on the third Saturday, the 18th of November.

The Martlesham Radio Society's Microwave Round Table will be held at the BT Laboratories, near Ipswich in Suffolk, on Sunday the 12th of November. For BT Labs' security reasons, all access is by ticket only, so if you would like to attend please write to Roy Smith, G0RRC, listing the names of all persons attending. Please enclose an S.A.S.E. Roy's address is correct in the current RSGB Call Book.

RAIBC Northern Ireland requires sample RAE questions and answers either on a database, ASCII file or computer print out, and on either five-and-a-quarter or three-and-a-half inch disks. The files or prints would be used to compile home tuition courses for blind or disabled people who cannot attend a school or college and want to study at home. RAIBC Northern Ireland is also looking for a volunteer to re-type questions and answers into a database. If you want to find out more about how you could help, please contact Dave, GI0HOW, at the address in the RSGB call book, or telephone 01232 471370.

The World Association of Christian Radio Amateurs and Listeners has announced the appointment of several new officers. The Reverend Philip Fanning, G6UFI, is to become General Secretary with effect from January 1996. Brian Hancock, G4NPM, and Peter Jackson, G0PPQ, have already taken up their duties as Treasurer and Newsletter Editor respectively. Further information about the W.A.C.R.A.L. is available from Derek Chivers, G3XNX, whose address may be found in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Kefalonia Island in Greece - which counts as EU-052 for the RSGB IOTA Awards - J48KEF is active from Saturday the 14th until the 21st of October.

From Anguilla, EA3ELM and EA2KL hope to sign VP2ELM and VP2E from Monday the 16th until Sunday the 22nd of October.

And from Ascension Island, N6TR will be active as ZD8Z from Tuesday the 17th until the 1st of November, including a single-band entry in the CQ World Wide SSB contest on the 28th and 29th of this month.

Now news of some special event stations:

The callsign GB125BRC is being operated from Paddock Wood until Saturday the 28th of October. The station is celebrating the 125th anniversary of the British Red Cross.

GB8CC will be on the air from Friday the 20th October for 28 days. The station is being run in conjunction with the celebrations in Cleveland around the birth date of Captain James Cook.

And over 220 GB callsigns have been issued to stations planning to be active during the annual Scouts' Jamboree on the Air. This takes place next weekend, the 21st and 22nd of October. Many stations will be helping cubs and Scouts to achieve their communicators badges and amateurs are asked to offer to exchange greetings messages with participants. The Third Colbury Scouts, New Forest North, will be signing GB2NFN on HF, 2 metres, 70 centimetres and on 23 centimetres ATV from Colbury Village Hall.

Next the Rally News:

And although we know of no rallies today, the Leicester Amateur Radio Exhibition will take place this Friday and Saturday, the 20th and 21st of October. All the major amateur radio companies will be exhibiting and there will be a large bring and buy stand run by the Leicester Radio Society. RSGB staff will be in attendance with an RSGB bookstall and membership information stand, and Morse tests will be available on demand. Doors open at 10.00am or 9.30 am for disabled visitors, and talk-in will be by GB2GH on 2 metres channel S22 and on 70 centimetres, channel SU22. A 12-page pull-out guide to the Leicester show was published in the October RadCom, or for further information you may call Frank, G4PDZ, on 0116 287 1086.

It was planned to switch on the 70 centimetre voice repeater near Bo'ness in West Lothian, GB3OH, during the afternoon of Saturday the 14th of October. The repeater operates on channel RB4, and John Wilson, GM6WQH, would appreciate signal reports either to his address in the Call Book or via packet to GM6WQH at GB7EIY.

The 10 GHz amateur TV repeater at Milton Keynes, GB3TG, is off the air for about a month due to refurbishment work being carried out at the repeater site.

The 1.3 GHz amateur TV repeater near Dunstable in Bedfordshire, GB3TV, is off the air for about two weeks from the 4th of October.

The 2 metre repeater near Caernarfon, GB3AR, on channel R4 is operating with reduced sensitivity until further notice. It is regretted that this will reduce the coverage area until the work is completed.

The 70 centimetre voice repeater GB3RE near Maidstone in Kent, which operates on channel RB11, was brought back into service from its new site on the 5th of October.

The 70 centimetre voice repeater GB3DI near Didcot in Oxfordshire, which operates on channel RB6, came into service on the 23rd of September. It is initially only running low power.

Now for the HF contest news:

The RSGB 21 and 28 MHz CW Contest is taking place today, Sunday the 15th of October, between 0700 and 1900 UTC. The rules are in the June RadCom. The results of the 1994 RSGB 21 - 28 MHz contest were received too late for publication in the October RadCom, but will be published in the

November edition, which is due to be posted to all members on Monday the 23rd of October. The VK - ZL - Oceania CW contest is taking place this weekend, the 14th and 15th of October. Brief rules are on page 23 of the October RadCom.

Next some VHF contest news:

On Wednesday evening, the 18th of October, the second session of the 1.3 and 2.3 GHz Cumulative Contest will take place between 1930 and 2200 local time. The rules are in the June RadCom.

Unfortunately, due to technical difficulties, we are unable to bring you the solar factual data this week. We hope to bring you a summary of this week's data in next Sunday's broadcast.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky November and G7 Victor Victor series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Lima series.

The Sony parts people aren't able to help me without more information.
Unfortunately, I sent the radio and manual to my brother in Saudi during
Desert Storm so I can't check the manual for part numbers etc.

Any information regarding finding a part number/replacement would be
greatly appreciated....

But I doubt that $31 (under $3/issue) would even cover one copy's share of production and delivery costs. The only way ARRL can deliver the magazine to subscribers/members at the price it does is by cross-subsidizing from other revenues (mainly, advertising revenues.) Why on earth should the ARRL subsidize non-members' subscriptions to a higher degree than members' subscriptions?

Real professional societies often do have non-member, pure-subscription rates for their journals, for people and organizations that don't qualify for memberships but want to get the journal. These rates are invariably much higher than the members' rates.

This isn't making any sense. If someone expects *only* a magazine, that is
going to cost the organization less than providing the exact same magazine
and something else (membership services) to another person paying the same
rate. With a larger circulation of the magazine, higher advertising rates
can be demanded, and more revenue gained from advertising. If the
magazines are really costing more than $2.50 net each to print and
distribute after advertising is sold, then where is the extra money coming
from?

>Real professional societies often do have non-member, pure-subscription
>rates for their journals, for people and organizations that don't qualify
>for memberships but want to get the journal. These rates are invariably
>much higher than the members' rates.

The reason for that is either to encourage people to be members and
penalize the curiousity seekers, or to milk as much money as possible out
of libraries, companies, and the like that are expected or required to get
a copy of the journal.
In the case of the ARRL, there is probably a tax issue, but the very real
point is that more members = more political clout. More magazines != more
political clout. The magazine is a desirable piece of paper that
encourages people to become members. Many think they are just subscribing
to a magazine, not joining a political organization which they may not
agree with but are being counted nonetheless.

>Chuck Spafford

Suspect that should be kHz (rather than Hz). Pretty sure they are
Non-directional Beacons (NDB's). For guiding aircraft. The letters are a
nmemonic identifying the airfield. BTW, they make excellent Morse practice for
persons in the early stages of learning the code. Has a "brain-washing"
effect. Generally, (but not always) the letters and spacing are beautifully
formed, and provide a good model. May the run in the background whilst doing
"more important" things. Even the most reluctant student will soon learn the
letters being repeatedly sent.

597. Request: should I fix dual band HT or just get new 2M HT?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-12 00:00:00 UTC
From: david_b3@sfov1.verifone.com
Message-ID: <1995Oct12.144448.4446@sfov1.verifone.com>
Source record: 236950

I had my Alinco DJ-580T checked out by Alinco because it wouldn't receive on 440 and had no audio on 440. They told me that it needed a new VCO (voltage control oscillator) for the 440 side, which will run me about $140. This is pretty steep, but I don't doubt their diagnosis; they've been a very responsive service group in the past.

I only really use the 2M side, so I asked if I could get away with not fixing the 440 VCO for a while. They did a quick check and said there was a little noise on 2 meters, which may or may not mean that something was up on the 2M side. If I need to replace the 2M VCO too, figure on another $80 to 140 down the road, depending on whether the VCOs are repaired concurrently or separately. They did not try to pressure me into fixing it; they were just giving me the potential additional cost if the 2M VCO were to go sometime down the road.

I've not yet authorized the repair, since I'm considering the following:

I've only really used the 2M side, and the folks I talk to (brother in law, etc.) only have 2M rigs. The HT is over 3 years old, and might be getting ready to poop out in other ways. So maybe I should save the $140 (or more if I need to get additional repairs in the coming months), spend $250 and get a new 2M-only HT, and see if my dual bander is worth anything to anyone as-is.

Any opinions on what makes the most sense, economically or otherwise?

You'll probably find some beacon-chasers (longwave DXers) over on rec.
radio.shortwave. Monitoring Times magazine has a section dedicated to
this. There's also a DX club (LWCA I believe), and a station reference
available. I know for a fact that several LW DXers participate in the
Fidonet Shortwave conference.

ZCZC AE29
QST de W1AW
DX Bulletin 53 ARLD053
From ARRL Headquarters
Newington CT October 12, 1995
To all radio amateurs

SB DX ARL ARLD053
ARLD053 DX news

This week's bulletin was made possible with info provided by Isao, JR1ROJ, Joe, NJ1Q, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

ROTUMA, 3D2/R. The Yamato Amateur Radio Club of Japan will make another try with plans for a November 4 to 7 operation. A typhoon ruined their 1994 attempt. Listen for 3D2AA, JA1JQY as 3D2SH, JA1KJW as 3D2HI, JE1XXG as 3D2ID, JR1LVB as 3D2HK, 7M1QAP as 3D2MU and JA8VE as 3D2KZ. For CW try 1910/1810, 3507, 7007, 10007, 14007, 18007, 21007, 24897 and 28007 kHz. SSB will be around 3797, 7077, 14197, 18147, 21277, 24937 and 28497 kHz. Satellite operating will be via AO10 and A013 on 145.885 MHz.

TUNISIA, 3V. YT1AD will be in Tunisia October 26 to November 3 and will sign as 3V8MM. He will also be in both CQ WW DX Contests as 3V5A. QSL via YT1AD.

QATAR, A7. Thomas, DL9FCQ will be active December 30 to January 14 on 40 through 10 meters. The call sign A71AN/DL9FCQ has been mentioned. QSL via DL9FCQ direct or bureau.

AFRICAN DXPEDITION. Roger, G3SXW, will travel to Ghana, 9G, and Benin, TY, during November. He recently made over 5,500 CW QSOs as 9N1SXW from Nepal.

IRELAND, EI. The East Cork Radio Group, EI7M, will be in the CQ WW SSB Contest on all bands. QSL via EI6HB, Denis O'Flynn, Ladysbridge PO, Castlemartyr, Co. Cork, Ireland.

MOUNT ATHOS, SV/A. Apollo, SV2ASP/A, was heard on 14084 kHz RTTY around 1530z and again around 1930z.

MARSHALL ISLANDS, V7. Tom, AL7EL, has canceled his KH9 DXpedition but will be active as V7/AL7EL October 18 to 25.

PACIFIC DXPEDITION. Here is the schedule of Fumio, JA3JA, for his all band, CW/SSB/RTTY jaunt. V73JA October 13 to 19. T30JA October 20 to 27. C21/JA3JA October 28 to 30.

CHATHAM ISLANDS, ZL7. Leo, K8PYD, and Jon, WB8YJF, are planning both recreational operating and an entry in the CQ WW CW Contest. Listen for ZL7PYD and ZL7CW, respectively.

PUERTO RICO, KP4. Ramon, KP4VP, will operate PacTOR, AMTOR and RTTY daily from 2200 to 0030z, or perhaps even later. Activity is limited to 20 meters from 14065 to 14099 kHz. Other bands may be added in the future. QSL via KD8IW with SASE, please.

ARUBA, P4. Mike, K4PI, will sign P49I October 24 to 30. He will be in the CQ WW SSB Contest operating 160 meters Single Band. Low bands, WARC and CW will be operated outside of the contest. QSL via K4PI.

SILENT KEY NOTE. QSL Manager Isao, JR1ROJ, sadly reports the passing of Harris, 9M6HF. Harris, an active contester and kind host to many hams visiting 9M6, died September 20 of cancer. JR1ROJ will continue duties as QSL Manager.

THIS WEEKEND ON THE RADIO. Your weekend Radio Menu offers the FISTS CW Fall Sprint, RSGB 21/28 MHz CW Contest, VK/ZL/Oceania CW Contest, Ibero-Americano Contest, Illinois and Pennsylvania QSO Parties, and QRP ARCI Fall CW QSO Party for on the air fun. Check page 127 in October QST for details.

It really bothers you guys when someone like me comes along, doesn't it?
Someone who refuses to just speak the "party line"...you know, like "hams
are good and CB'ers are scum, no exceptions", etc. When someone like
myself comes along, points out flaws in your arguments, and questions
"the system", it's a bit uncomfortable, isn't it?

608. Commercial Op Lic. Exams--Durham NC 21 Oct--SHORT version

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-12 00:00:00 UTC
From: ab4el@nando.net
Message-ID: <45i94e$bib@parsifal.nando.net>
Source record: 236961
Cross-posted to: triangle.radio,rec.radio.amateur.misc

SHORT VERSION of
Notice of Examination Session
for Commercial Radio Operator's Licenses

Even if you are not personally interested in this session,
please pass this notice onto someone who may be. Thank you.

21 OCTOBER 1995
9:30 A.M.
SW Branch of Durham Public Library
3605 Shannon Road
Durham, NC

Licenses Attainable:

Marine Radio Operator Permit - - Element 1
General Radiotelephone Operator - - Elements 1 & 3
GMDSS Radio Maintainer - - Elements 1, 3 & 9
GMDSS Radio Operator - - Elements 1 & 7
Ship Radar Endorsement - - Element 8
3rd Class Radiotelegraph Operator's Certificate
--Elements 1, 5, T1 & T2
2nd Class Radiotelegraph Operator's Certificate
--Elements 1, 5, 6, T1 & T2
1st Class Radiotelegraph Operator's Certificate
--Elements 1, 5, 6, T3 & T4

Who is offering it: W5YI-affiliated NATIONAL RADIO EXAMINERS in N.C.

What will be offered: Examinations on elements 1, 3, 5, 6, 7, 8, 9.
Contact us before hand about Code Elements--credit for elements
T1 & T2 is granted to Amateur Extra Class License holders who
passed their 20 WPM test.

TWO IMPORTANT ITEMS:
1: no FCC administrative fees (for now)
2: new question pools to take effect soon

#1: The FCC has suspended collection of the additional administrative
fees for licenses and endorsements.

However, our examination fees schedule continues in effect: payable
IN CASH at the exam session! See paragraph 10 for details, or
call me for an explanation (1-919-787-7608).

#2: Finally(!) a definite schedule of dates has been set for the
switch over to NEW question pools:

GMDSS (elements 7 & 9): 01 DEC 95
GROL /Radar(elements 1, 3 & 8) : 01 JAN 96
Radiotelegraph (elements 5 & 6): 01 FEB 96

This session is the last for the current question pools.

For more detail, email me at the following address:

Hi, everyone.

I purchased my first 2 meter radio: a Midland brand HT. I rarely see this radio advertised in magazines. Does anyone know anything about it: who the manufacturer is (I heard a rumor that it was ICOM), what battery packs/accessories are compatible, etc.? If you have one, are you happy with yours (I am), and are we the only 2 people in the USA who have this radio?

73,

Ken KF4BQF

ow Drew, that is an idea that I really like. Or how about sending a bunch of flyers to your "favorite" business or organization. Make 50 or so small battery purchases and send a flyer to a different name with the same address. Just think how your "favorite" organization will be made aware of those great sales.

By the way, I always get the sales flyer in my Sunday paper right after I get in in the mail. Big Deal!

Ah Drew, I can support and understand your no-code stance, but
let's not be silly about the illegal ops on 27.55.. Many hams
get a start in CB and become interested in getting off the 11
meter band, but don't defend the law breakers.

As for 20 meters, i wouldn't be foolish enough to defend the
law breakers there either. Just because some bozo has a license
doesn't mean he can now freely just on the 20 meter band and
start being a jerk. Jaming, unidentified transmissions, deliberate
interference etc etc are still illegal.

> Wonderful automobile. I think he sold it in 73 when the Arabs got pissed...
>

Sounds Familiar: I was pulled over for using a radar detector a few
years ago. I applied to fight it in court. They sent my summons 2 days
before I was due to appear in court 2000km away.
I phoned them to complain about the notice given. The response was:
'Don't worry, We'll send you a form of appeal to you.'
I got the form, sent it back.
A week later I got the reply: Appeal Denied; pay us the $100 fine
and $70 court costs within 10 days or we'll throw you in the slammer.

Of course these sorts of extortion tactics are what one can expect
from the Queensland State Government.

The law at the time was only a few weeks old at the time.

Evidence on my side was:
I hold an Amateur Licence, police radar (in QLD) uses 24GHz,
a primary allocation to the amateur radio service. Police radar is
a secondary service.
Under the radio communications atc at the time, ANY person has
the privilage to intercept ANY electromagnetic signal except those

interconnected to the telecommunications network. (PSTN)
Under the Australian Constitution, any Federal law (radcom act)
has priority over any state laws (QLD taffic act) to the point of
the inconsistancy.

that was 4 years ago. Stat of Lim is 7 years in QLD I think.
I'll get them back before then.

617. Re: A Label Past Its Time

Newsgroup: rec.radio.amateur.misc

Source record: 236970

Following my original posting, "Let's Just Stop Saying 'No-Code'," I've been asked if I have a better nickname for the Technican Class license. After discussing this with several other hams, I propose to replace "No-Code Tech" with "High Tech." A ham club starting up a license class could advertise, for example,

Local radio club offers easy access to high-tech communications

Evening classes to earn ham license without Morse Code requirement

This emphasizes the positive, not the negative aspect of the license, while still soothing those whose first reaction is "Ham radio! Morse Code! Run away!"

Comments?

The High Tech ticket: a label whose time has come.

Rob-

I certainly agree with your statement. However, I suspect that the
mention of the "keg", was referring to the practice of some groups to use
the Ham Call of one of their Extra Class members, for their contest
station.

As long as a control operator is present, it is perfectly legal as others
have stated. However, I understand that some groups "stretch" the concept
of control operator to the point where they keep on operating, even though
all the higher class guys have gone to lunch (if they ever did show up).

Some define "control operator" as someone with the appropriate license,
who is in a position to immediately intercede in operations that stray
from the rules. The looser definition appears to be someone who will take
responsibility (blame) for any rules violations that may be caught by the
FCC.

I doubt that the FCC is looking for ANY rules violations during such
crowded contests as Field Day. Therefore, the discussion compares
operations where newcomers can get a legitimate taste of the better
aspects of Ham Radio, and operations where newcomers are shown how to
"bend the rules".

Are we the only two with a bad attitude? Is there something else about
the FCC Rules that I don't understand?

card to even enter the store!), and the local ham radio store does it
too.

Isn't that funny that you would criticize another chain of stores that
was owned by your parent Tandy? You know Tandy owns Incredible
Universe. Also, that card is why I won't shop there.

Travis Brodeen (wzl@primenet.com) wrote:
: How much does it cost to get the basic HAM radio license? I'm
: looking to get into it... Email me if possible.. I have a few
: questions.

The license cost is $5.90 and is good for 10 years. There are two ways to go:

1) Novice - You must pass a 30 question written test and be able to
handle 5 words/minute of morse code.

2) Technician - You must pass a 30 question written test and a 25
question written test.

I went the Technician route and passed last Saturday. It's not that tough
and with a little study you can ace the test.

It is only a rough guess, based on similarities of the prefixes,
but I suppose RNB is a Russian station, and VEG... is from Canada.
By the way, the original poster surely meant kHz as unit of the frequency ;-).

Some RS sales droid, upon hearing that response from me, started whining that I was
only making a $2 purchase. Whereupon I put MY two bucks back into my pocket
and left--and have never gone back to that store.

>A really stupid thing to get disgusted and sick over.

Actually, I turned it into an adventure. They get the address of one of their
other stores around here from me. Took a few tries, but I've memorized
at least one of their stores' street addresses. They haven't complained
yet. And besides, if the flyers are sooooo valuable, I wouldn't want them
to miss out on all of those sales now, would I?

>
>Thanks in advance,

Some may disagree, but I prefer a dry cell (AA) case. If you are at some
event, whether stationary or mobile, and your NiCads die, there is
usually no way to charge them where you are. But, if your AA cells die,
you can simply either take more out of a pocket or bag, or go to a store
and buy some.

Slightly more expensive over time, but so much more convenient. You
never have to worry about how low your NiCAD batty is.

I too object to being asked my name and address. If RS used the information for advertizing, then I would be so opposed to giving it out. What I fear is that RS *sells* that information to other companies, marketing firms, and commercial database vendors. This is very common--even state departments of motor vehicles do it unless you notify them in writing no to.

Call me paranoid, but I want my name and address in as few databases as possible. On a less paranoid point: I want as little junk mail delivered to me as possible. If RS wants me to know about a sale, they can tell me and every one else in their monthly newspapers inserts.

Al,
For demo purposes I run CWAVE for cw translation. It does take a bit of horsepower in you computer to run however. I currently am using the shareware version, but may send in the green since I am now using it often for scouting demos with our post. It runs great on a DX4-100 or greater. It will run but stumbles once in a while on the 386DX-40. Check your local BBS. I don't have any FTP site info on it however.

--------------------------------------------------------------------------------
>Thus the end of RIME as Internet newsgroups allows freer speech.
```

You got it, Burt. The Internet has finally hit its stride this
year (and shows no signs of abating -- folks are jumping on the
Internet in unprecented numbers), and it means the death of all
"privately owned" networks with the exception of large commercial
services that can offer HUGE file bases as well as being connected
to the Internet. NOBODY needs to indulge some guy who wants to play
policeman anymore, and nobody is going to. Moderation is totally obsolete.
People who are still doing such a "job" are dinosaurs. Newsreaders
offer endusers all of the control over content that they'll ever need, and
anything else is obtrusive, inefficient, less flexible, and less personally
customizable. In the process of killing off private networks,
the Internet is demonstrating how much better a network is when it has
minimal bureaucracy and vast autonomy. What we're seeing in the large
number of unmoderated newsgroups is that the lack of a moderator forces
people to take personal responsibility for their own posts and for
how they react and deal with the rest of the world. The result has
been that, without a moderator, people who have trouble dealing with
dissenting opinions, controversy, or other "difficult topics" have
been forced to "grow up" quickly and realize that the world is a
place where tolerance is how people really get by out there in "the real
world". If someone can't deal with dissension and controversy, then
he may as swallow a bottle of aspirin right now because he'll never
survive out there on his own in that real world.
On the other hand, what we've learned from moderated conferences is
that the existance of a moderator (and supporting bureaucracy) encourages
certain types of people (mostly young kids who are accustomed to being
given orders as to what to say and do by "authority figures", and thus
believe that this is a natural thing that should be imposed upon electronic
mediums too) to complain about things that they should be able to
personally deal with entirely upon their own, and causes excessive amounts
of bureaucratic wastefulness. You only need to compare the relative

bandwidth on RIME that is dedicated to discussing "personal disputes" and "moderation issues" to that same bandwidth upon the Internet to see how much more efficient the Internet is at dealing with this. In fact, the only time you see any such thing on the Internet is when some damn fool kid tries to inflict his own idea of a "general policy" upon some newsgroup (usually after getting this bad idea from one of those dying private networks), and the rest of the newsgroup has to "educate" him as to what free speech really entails, and why it's valuable and should be protected from unnecessary intrusion

>basis, etc.

Oh, come on! I haven't found a sales clerk in Radio Shack that cared
enough to learn my first name. As a matter of fact, if they did take
the time to learn my name they wouldn't have to keep asking me every
time I buy a battery.

>2) Provides the customer with proof of purchase in case their reciept is
>lost.
>3) Puts the customer on the list to recieve the flier, which will alert

What if the customer doesn't want the flier?

>4) Allows us to pre-approve customers for credit.

You mean to tell me that if I buy a battery and give you my name and
address then you are going to start checking into my credit history?
I don't care for that one bit!

>Also, If you give the information, and return to the store, it will save
>you the trouble of having to go through the same thing over, and over. I
>do wish that the stores linked these databases, though...

No, even if you are already in the computer, they still keep asking
your name ever time you come in. Sure, it only takes a second or two,
but frankly it's a hassle. I understand if you are buying something
expensive, but for a small purchase it is just a hassle and an
infringement of the customer's privacy.

Tell me Mark if you were annoyed with someone that let's
say criticized RS on say Compuserve. Would it be OK for you
to access that person's Tandy VIP account and publish details
of that account on say Internet and/or Compuserve?

This is exactly how one RS store manager respected my privacy recently.
How did he get this kind of information? The best I can figure it out
he represented that I was in the store questioning my account
and conned Tandy Bank into spilling their guts. Just for record
I have never been in the store in question nor have I been in the
city the store is located in for 20 years.

What did I do to deserve this attention? I published a "heads up"
that Tandy had charged me interest on one of their "No interest
for XXX" programs and for other to watch out. As far as I know
this jerk is still a RS employee.

Remember this when RS wants information and consider how much
privacy means to them. They have about as much respect for your
privacy as they do for your inteligence.

I beg to differ with you Mr. Hermann our concept of law
in criminal matters clearly holds "innocent until proven
guilty in a court of law". Not a court of public opinion
or tabloid news. So in the eyes of the law he is innocent.

If anyone should be the focus of outrage it is the LAPD and
the LA Distric Attorney for the lousy handling of the case.
Wouldn't it be ironic if the real killer(s) get totally away
because of predisposition of the above mentioned agencies
to convict O.J.

Sounds like you have a high resistance connection. When the higher current for
transmitting is drawn thru this connection it drops enough voltage to be lower
than the radios required voltage input. Check for these or some sort of
resistors etc in the line.
Good luck

650. This Week in Amateur Radio #133 (for air through 10/20/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-13 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <RdFD3X9.sanderman@delphi.com>
Source record: 236893

Here is a summary of news items covered on edition #133 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 20-Oct:
-
1. AMSAT Readies First Phase 3-D Launch Installment Payment
2. FCC Revises HF Digital Rules, Clarifies Use of Digital Codes
3. ARRL Loans Emergency Communications Equipment to USVI Hams
4. 1996 Maine Teacher of the Year Awardee a Well Known Amateur
5. IEEE Microwave Society to Include Amateurs in '96 Symposium
6. Upcoming Special Event Stations with George Bowen, N2LQS
7. New Digital Fiber Network Offers Faster Data Transmission
8. "The RAIN Dial-up" from Chicago
9. IMAX Images Available on the Internet
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. N2LQS Offers Even More Special Event Stations
12. Astronomers Watch Approach of Comet Hale Bopp
13. "Amateur Radio Newsline" - Edition #948 from Los Angeles
14. Weekly Propagation Forecast
-
Funding for the program's transmission and production expense was
provided this week by a grant from users of the N9SBH repeater
system, which carries "This Week in Amateur Radio" on 146.505 and
224.16 MHz in North Webster, Warsaw, Elkhart, and Fort Wayne,
Indiana. Satellite time and uplink equipment have been provided
by SKYVISION as a service to the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program will be carried
on the "Tech Talk Network" this Sunday at 5:00 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @

WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

Of course, it certainly does not imply guilt of having committed the crime either. It simply now indicates that someone committed the crime. You are correct that not guily and innocent are 2 different things, however in the US you are presummed innocent until proven guilty. The prosecution failed to prove him guilty. So he is presummed innocent. That is the real point. I think your view would change if you were charged with a crime you did not commit and were found not guily. Would you then still not be innocent? That what you are saying about OJ.

> Nathan Ryan Gingras (herb@alpha1.csd.uwm.edu) wrote:
> : i work at radio shack, And it annoys me when people get defensive about
> : giving this information.

But we are defensive for a very good reason. Our mailboxes get
flooded with stupid flyers and junk mail of all sorts mailed to
us from list collected by national mail databases, our privacy
and serenity is violated by obnoxious and intrusive telemarketers,
and all but the brain-dead worry about other kinds of violations.

Moreover, to be quite frank, Radio Shack is not worth the bother
of being hassled each time I wish to buy something. Everything
they sell is available elsewhere, often cheaper. My advice to
Mr. Gingras is that if he is annoyed by his customers, then he
should get another job. Heavens knows there are better
employers (like those who don't penalize and punish their
employees for respecting their customer's privacy).

What's happening here in rural New York is that the Red Cross types who
are into emergency services are taking the Technician exam, buying
2-metre handhelds, and communicating directly via the amateur service,
taking advantage of emergency power sources for many of the repeaters.
Its working today, and providing a valuable service until the utilities
can get their recovery in place.

As Bill Blohm pointed out, they are also forming a link between the
various agencies that don't have direct communications.

>
> How do you read this, Gary?

Well, I am not Gary but I will respond anyway and give this a
shot.

I assume when you say "primary" you are talking about a primary
control point or a primary control operator.

There is no requirement that a station have a "primary control
point". A station is just required to have "at least one control
point". If a control operator is at a local control point, the
mobile patch user can be just that, a user, not a control operator.
So yes, in the case of running a patch at your house, if someone,
such as another family member, is a ham and is at the local control

point, there is no need for a remote control point. With no need for remote control, there is no need for an auxiliary station.

In the case of a repeater, users can control ancillary functions. Ancillary functions are not considered control operatations. If the user is controlling the radio (e.g. turning the station on or off) by remote, they must do it from an auxiliary station above 222. The station control is done from a control point - a remote control point can't be on 2 meters since it is an auxiliary station.

The patch is considered an external, or ancilliary device. Accessing or using the patch is not considered remote control of the station so it can be done on any frequency as long as a control operator is at a control point.

Now I'm confused :)

Well, Peter, you have just turned over a rock and found the
dirty little secret of incentive licensing. It doesn't stop
with "No-Code" Technicians. The Extras snub the Advanced people.
The Advanced licensees snub the Generals. The Generals snub
the "Techs". The Techs snub the "No-Codes". And they snub
the novices if they can find any.

After watching this go on for almost 20 years in Amateur Radio,
I am just about convinced that human society will never rid itself
of the status-seeking that goes all the way back to the monkey
troupe.

He's not offering a CD or anything else that's not completely
available on packet BBS's or here on the net...Even QRZ who sells
their CD has a WEB page and offers the mods for free...I don't
know if your involved in Amateur Radio but I have been for
about 35 years...I also have 1000's of mods and am glad to
share what I have with others...sorry there's enough chiselers
out there for all of us...It has been customary over the years
to share information in this hobby..If he is interested in
starting a business and selling his wares then this is definitely
not the newsgroup to be in...check the FAQ's

Steve, WA2NHZ

ps...I like your signature..is socialism also when everyone wants to share and/or give things away free?

Make that DC and do it to each cell for only a split second..
check the voltage on that cell to see if it reacted..be careful
of sparks and heat..wear safety glasses and gloves..the cells
could explode.

Absolutely. Bartering, and donations to organizations like Goodwill, Red Cross, etc, are all socialist organizations. They are anti-profit, anti-capitalism. Non-profit organizations are sucking this country dry. You'd be surprised at the billions that go out of the treasury to aid these organizations. Usually at the hands of congresspersons...

>i work at radio shack, And it annoys me when people get defensive about
>giving this information. True, your privacy is your right, but providing
>this info will help us & the customer in many ways:

It annoys me when people ask me for information totally unnecessary
for carrying out a transaction. If there is a legal requirement
for asking, I might grumble but I don't blame the clerk, but
no purchase I have ever made at Radio Shack fits this category.

>1) Allows us to get familiar with the customer, know them on a first-name
>basis, etc.

Then, simply ask me my name, and use it a few times. You don't
need my address or telephone number to have a first-name relationship
with me. However, it may be the case someone prefers not to engage
in an artificially sincere conversation, and may prefer to be called
"Mr." or "Mrs." or "Miss"; I hope you can appreciate this.

>2) Provides the customer with proof of purchase in case their reciept is
>lost.

This might be a benefit, but no RS clerk has ever suggested this to
me when I'm declining to give my name and address to buy a $1 box
of fuses.

>3) Puts the customer on the list to recieve the flier, which will alert
>them of items on sale in which they may be interested

Well, it should be no problem at all to ask me if I'd like to be
on the mailing list and understand when I politely decline. Hey,
if I miss out, that's my problem, isn't it?

>4) Allows us to pre-approve customers for credit.

Good God, no! If I want credit, I'll fill out an application. I
am having a hard time believing RS routinely scans the customer
database, pays for credit reports, and then makes sure some note
pops up next time someone buys a 9V battery saying "Jon Doe has
$1500 of pre-approved credit". If Tandy really does this, I'll
never, repeat *never* give my name or address again, not that I
do frequently now. Maybe the folks in Fort Worth will help
clear this up when I call tomorrow and ask about it.

>Also, If you give the information, and return to the store, it will save
>you the trouble of having to go through the same thing over, and over. I

>do wish that the stores linked these databases, though...

How about this: when I politely decline to give the information,
it will save you the trouble of having to type it in. Then, on
future visits, I'll save you that trouble again and again. After
some time, when you actually do remember my first name, you'll also
remember that I prefer not to give my address and you'll have the
respect to not even ask in the first place.

>When people come into my RS store and are unwilling to provide name and
>address, it gives me the impression that they don't trust us....

Don't take it personally, Nathan. If I don't want to give you my
address, maybe I just don't want to give out my address. Maybe you,
like most people, are a nice, honest, law abiding citizen and would
never think of using my address to engage in a criminal activity.
However, there are actually some very bad people out there, and
some of them even work at Radio Shack; it is just the law of
averages at work. If I'm paying cash and carrying my purchase
out the door, there is no conceivable need to even know my first
initial. Suggesting otherwise smacks of deceit, and *that* certainly
doesn't inspire trust.

The suggestion that my name and address may be used to "pre-approve"
me for credit makes me even less trustful, by the way.

>The benifit is mutual, and really, how hard is it to say your name & address?

How about this: my name and address are pieces of information that
can be used to my disadvantage; if I politely decline to give them
upon request, how hard is it to respect my desire as a customer that
may be directly contributing to your income?

This is perfectly legal, but you can only use a control operator's
call if they are present and use their privilages. The only
disadvantage is that you are credited with nothing and won't get a QSL
and won't qualify for other awards also. And if I (11 yrs. old at the
time) can do at least 5wpm couldn't you?

Answering Cash is faster than spelling my name over and over, and having
to tell the clerk which one I am on the screen (of which there are
at least 5 with minor variations because of entry errors.

: When people come into my RS store and are unwilling to provide name and
: address, it gives me the impression that they don't trust us....
: The benifit is mutual, and really, how hard is it to say your name & address?
Who cares if they trust you or not, they are paying cash! If they
cannot document their purchase at the time of the return, you don't have
to take the return anyway. And I would bet that your undocumented return
rate is not substantial enough for this to even be a concern. Besides,
the sales receipt still shows what was bought, what was paid, and the date.
If you require a name/address for the return, get it at that time or
refuse the return. However, now that I know that you don't trust me,
I'm not too inclined to return to your store. K-mart, Wal-Mart,
grocery stores, convenience stores, gas stations, etc do not seem to
non-trusting in me when I pay cash. If you changed jobs and went to
work for K-mart, would you insist that each customer there provide
a name/address for each purchase ?

That's my $.02

I use a 12 volt automobile battery for burning open internal shorts
in nicad batteries. Do it like the previous gentleman said. Connect
the 12 volts to each cell individually, and only for a brief moment. If
the "zap" is successful, the cell will show some voltage. You may have
to zap the cell more than once. Stop when the cell shows any voltage,
no matter how small. If the cell gets warm to the touch, stop and let
it cool off. BE VERY CAREFUL -- these cells can explode and cause a
good deal of injury or other damage if you over do this operation.
You will most likely find the battery grows internal shorts again in
the future, so it may have to be replaced after all.
Good luck.....
Marion

The newsgroup misc.radio.swap posts between 100-200 pieces of equipment
every week. It is larger than this group. Contact your IPS vendor and
request 'swap' be added to your list. This group would be distroyed if
swap were merged with it.

675. 9913 low loss coax, flexible equivilent

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-13 00:00:00 UTC
From: rbono@nectech.com
Message-ID: <45lra5$m0k@cosmos.nectech.com>
Source record: 237003

Hi,

Does anyone have any experience with some of the so called
flexible equivilent to 9913 low loss coax that some of the mail order
dealers are selling??

I need about 100 feet of it. I'm tired of replacing my Belden 9913 every 4
years or so at .80 per foot. I see the flexible 9913 equiv's advertized
for about .40 or .50 per foot.

These are supposed to be the same as 9913, but have a stranded instead
of a solid center conductor.

So tell me of your experience with this stuff.

How long has it lasted?
Have you made loss messurements (supposed to be about 2.7db/100ft at 400MHZ)?
Is is significantly more flexible?
I need to go around an antenna rotor.
Does it need special N-connector center pins as the 9913 does?
Is it the same impeadance as 9913 (50 ohms).
Is it's jacket of good quality?
Does it still have the same foil/braid shielding?
Is the amount and quality of the braid the same as the 9913?

Please email any significant information to:

ImRich@tiac.net

Thanks!

Rich

It hurts those who have these groups dropped from their system because that system cannot be used for commercial messages. Yes, that really does happen...I was sent a message from a DoD site saying exactly that.

Please, people, use only rec.radio.swap for forsale messages.

If you can't get Usenet, the best suggestion I can make is to prevail upon someone to set up a mail server for rec.radio.swap.

There's no need to be insulting or inflamatory. *Any* newly minted
amateur, be he Novice, Tech, General, Advanced, or Extra (beep he
ever so fast) would likely also not be able to repair his HT, or
program a repeater controller, or explain in detail the internals
of AX.25 right out of the box. That's because he doesn't yet have
the hands on practical *experience* needed to do so.

That doesn't mean we should be insulting. It merely means that
the newly minted amateur hasn't had the benefit of the years of
experience those of us who've been amateurs for a long while have
accumulated. So we need to offer help and advice, just as *we*
received help and advice when we were newly licensed, not scorn
or ridicule because the *name* of the license class isn't fully
descriptive. Should we ridicule the Extra because he can send
.---- ----- -...- ....- --. --- --- --. -... ..- -.. -.. -.--
at 20 WPM?

Probably, but that's another thread. :-)

>
>How do you read this, Gary?

Primary, secondary, tertiary, it doesn't matter, control is control,
and these systems can't operate under automatic control, so however
you deem the control operator's status, he has to exert transmitter
control locally, by wireline, or in auxillary service over radio.
If it's the latter, it has to happen above 222 MHz.

A control operator has to exercise supervisory control over every
transmission's content as well as its technical performance. If
the operator isn't monitoring, and isn't at a control point, he
isn't a control operator.

Now lots of amateur stations operate illegally under this metric.
And they usually get away with it. But if you read what Part 97
says are the duties of a control operator, you have to admit that
someone not at a control point, and not monitoring, isn't acting
as a control operator of any sort.

>them up, is this true?

It certainly will wake it up, probably permanently. This is *very*
dangerous, don't even think about it. You *can* sometimes zap a
shorted cell back to life, but not this way.

In the first place, *never* abuse a battery this way. The odds of
damaging a good cell are high. If you must zap, you must zap the
individual faulty cell. And you certainly don't want to do that
with line voltage. Charge a capacitor from a bench supply (10,000 uf
at 12 VDC is about right), and discharge *that* across the cell.
That way you can't have runaway currents *exploding* a cell.

The customer does not care if you get annoyed. You are there to sell merchandise, plain and simple. There is one RS store that is close to my office, but I drive past it to go to another, where they are not so insistent on getting this info.

: Also, If you give the information, and return to the store, it will save
: you the trouble of having to go through the same thing over, and over. I
: do wish that the stores linked these databases, though...

If RS did not ask for the info in the first place, we would not have to go through the same thing at all.

: When people come into my RS store and are unwilling to provide name and
: address, it gives me the impression that they don't trust us....
: The benifit is mutual, and really, how hard is it to say your name & address?

It is not hard to say it, but most of us are busy, and we do not like having our privacy invaded at the same time.

I do not trust many retailers in the first place.

Could be that most of us already get enough junk mail in the first place. I enjoy getting the RS sale fliers, but how do we know to whom RS sells their mailing list?

The only reason that I ever go in any RS store is that a friend from the local radio club is the manager there. I have been so put off by this inquisition in the past that I actively avoid RS if at all possible.

691. Re: Whats ur name Radio Shack

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-13 00:00:00 UTC
From: Michael.Black@juxta.mba.org
Message-ID: <b93_9510131330@mba.mba.org>
Source record: 237019

So I'll add my two-bits to this thread about Radio Shack
asking for your name and address each time you buy something.

I never liked it since it was a tedious process to go through
every time I bought something, which invariably was a component
that I was paying a few dollars for. The process wasn't a bother
when buying something substantial, because when you're buying
something for a hundred dollars or more, it deserves little pomp.

However, those of us in Canada are now free of the process. They
don't ask anymore, and in fact there is no longer any place on the
bill for a name and address. This isn't something they've simply
dropped for low cost items, because I did buy something last year
and the woman made a point of telling me to keep the bill for
warranty purposes, but never asked for my name and address.

I was always surprised that the people working at Radio Shack
would want to bother filling out the name and address when I was
buying a few dollars worth of something. When Radio Shack first
got into the computer business, history has it that they weren't
sure whether or not it would sell. They ordered X number of
TRS-80's with the fallback plan that if nobody bought them, they
could be used in the stores for administration purposes. They sold,
and the stores never got their computers to keep track of inventory
and such. The clerks continued to fill out those forms with your
name and address by hand. Then eventually they did bring in
computers, much later though at this point it must have been a good
number of years ago. They continued to ask for name and address.
It should have been a less tedious process for them, since nobody
had to transfer that information into a data bank later, but since
few of the clerks seemed to have touch-typing abilities, they had
to hunt and peck and it took longer than when they did it by hand.
Around that time, I saw some message from the president of Radio
Shack in Canada in the flyer saying how the stores would keep
the information at hand if you were a regular customer, so they
could get the information by asking your last name. SOmehow,
that never seemed to work for me. Probably because I never
went to one Radio Shack regularly.

At some point, I stopped getting the flyers in the mail. I'd
been getting them for close to twenty years. They also phased
out the asking of name and address. I can't say when they
stopped doing that. There must have been period when they had
stopped asking, but I simply assumed the rules had been loosened
and they didn't have to ask everyone. It was later when I

somehow grasped that they weren't asking anyone, anytime.

It's a whole lot nicer buying something at Radio Shack now that
they don't ask for your name and address here in Canada.

OK, I'll bite :-)

Check out your University or College library. They have good stuff concerning this. Don't be afraid to go in the door just because you're not a student. Forget about the city library. These are for babysitting kids. Look for a book by Tannenbaum (sp?), and start there.

Another good idea is to just read the RFC's. Do a lookup on Archie and find the nearest site that has them.

As far as amateur tcp/ip, hmm, there are some listservers you can join. Maybe someone will jump in and tell which ones are active. All the ones I used to subscribe to, are pretty much has beens. They argue about everything, and accomplish nothing (on a good day).

694. Re: Power supply for HTX 202?

I have a question in thsi realm also. I purchased an adapter for my 202 from a commercial concern for use in my car cigarette lighter. The unit works fine on the battery poweer until I hit the PTT button. The display goes out and the radio does not transmit!.. I then have to turn the unit off and back on again to receive. The trnasmission never makes it out. The thing act just like it does when you transmit with a low batter pack the last time before it gives up th ghost. I have tried the system with the low poer button and it seem s to work fine. I have also tried it with my HTX-404 with no problems. Any Ideas?

Radio Shack's policy has always annoyed me. At first I justified it because I would get a Catalogue in the mail. These are very useful when calling the store because you ask them if they have a 741 op amp in stock. They don't know what that is - you must supply them the the Radio Shack stock number. I always carry that around in my head.

But now you have to BUY the lousey catalog, and I have not even received any fliers in the mail subsequent to my last 10 purchases at Radio Shack. I *have* started getting a whole bunch of new junk mail though. I suspect Tandy corporation sells these lists to add to their bottom line.

697. Flaky Kenwood TM-742 - Ideas?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-13 00:00:00 UTC
From: djenkins@wang.com
Message-ID: <DGELHn.BEq@wang.com>
Source record: 237025
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am posting this for a friend who is currently between email addresses. [Since I have the same radio purchased on the same date - I too am quite interested in the answers.] Email replies would be more convenient for me but she and I would welcome insights in any form.

- - - - - - - - - - - -[snip here] - - - - - - - - - - -

I have a Kenwood TM-742A that has been behaving strangely. Sometimes while I'm transmitting it becomes "frozen", i.e. the level meters remain at their most recent indication, and I'm not actually transmitting. Often a power reset will clear this, but not always. At other times, it won't respond to the power on/off switch - either it won't power on if it's off, or it gets stuck in the power-up display (the one with just 'on' displayed) when I try to turn it off. One time it got into a state where it had two bands showing the green "selected" light simultaneously. And this morning, the radio froze while I was just receiving, and it wouldn't respond to the power switch. A few hours later, it had revived itself.

Unfortunately none of this behavior is reproducible on demand, and I haven't been able to find any correlations with heat, location, engine running or not, etc. There are no other transmitters in the vehicle.

The radio is mounted in the trunk of my 1993 Accord 2-door, and the control head is mounted on the cup holder, center console.

Fortunately it is still under warranty. I'd be interested to know whether any of you have encountered similar problems, and if so, what you did to solve them.

Thanks in advance for your help.
73,
Nancy / N1OEZ

Yes, I know Incredible Universe is owned by Tandy. Yes, it might be funny that I criticize a sister chain, but it's true. There are some things I don't like about Radio Shack, either, but I deal with that because it's my job. I'm sure if you've worked before, there were some things you didn't like about your job.

However, the first time I shopped at Incredible Universe, I was INCREDIBLY DISSAPOINTED! Not only the stupid ID card, but the atmosphere as well. I work for Radio Shack, not Incredible Universe. Yes, they are both owned by Tandy, but are totally different companies. Even if I work for Tandy, I don't have to like all of their stores. That's my opinion. In fact, I get a 5% Tandy employee discount at Incredible Universe, but I will probably never use it.

Jim,

I work at a Radio Shack Store. Radio Shack does NOT sell their mailing list.
It is our own list. Once a list is sold, it's copyright is lost, and any
other company can buy it and sell it to another. We do not think this is
fair, so we do NOT sell our mailing list.

From Tad Cook, KT7H
Seattle, WA October 13, 1995
To all radio amateurs

SB PROP ARL ARLP043
ARLP043 Propagation de KT7H

After a period of no sunspots, the solar flux took a big jump in the last few days, bumping up over 90 on Thursday. Over many paths this signals a return of propagation on 15 meters and above.

Geomagnetic conditions have been disturbed, with the A index in the double digits for the past week and a half. There have been many periods with a K index of four or greater, signaling greater absorption of HF radio signals, especially on polar paths.

Look for solar activity to slacken again, with solar flux back toward the low to mid seventies. Geomagnetic indices should be quite low after mid-month, with the possibility of a disturbance around October 24 and 25, and a big disturbance at the end of the month. Solar flux should also reach a minimum around 70 at month's end.

Sunspot Numbers for October 5 through 11 were 0, 0, 11, 25, 31, 49 and 72, with a mean of 26.9. 10.7 cm flux was 69.8, 71, 72.9, 74.3, 76.1, 82.3 and 89.5, with a mean of 76.6.

Path projection for this week is to Jan Mayen (JX) from Boston, Atlanta and Dallas.

From Boston, 80 meters should be open from 2130 to 1030z, 40 meters from 1830 to 0330 and 0700 to 1300, with the strongest 40 meter signals around 2030 and the best 80 meter signals around 2300. 30 meters should be good from 1130 to 2230, and 20 meters from 1500 to 1900. 17 meters may be open some days around 1800.

From Atlanta check 80 meters from 2300 to 1000z, 40 meters from 2100 to 1130, and 30 meters from 1230 to 0200. 20 meters looks good most days from 1300 to 1800, with peak signals around 1400.

Dallas should have 80 meter openings from 2330 to 1000z and 40 meters open from 2230 to 1200. 30 meters looks open from 1230 to 0200, with best signals around 1300 and again at 2200. 20 meters looks good most days around 1700 to 1830, but may open as long as 1400 to 2200.

Source record: 237030

On another newsgroup, I have seen questions about what is considered the 2 meter AM calling frequency these days and what part of the band should be used for 2 meter AM operation in general.

This brings up something that has been on my mind for a while now. In my area we have a small group that operate RTTY on 2FM. We have been using 145.8 since about 1970. Now, it has been declared that the nationwide frequency for APRS in 145.79. Of course we interfere with each other. Gess since we are outnumbered, we have to move.

No matter where I look on the band, it seems like there is always packet there, like every couple of guys has to have their own frequency to keyboard on. Packet has all but taken over the band wherever there are not repeaters.

According to the ARRL "plan" there are several areas that are supposed to be for satellite operation. Are these all output frequencies? I don't see why so many kHz is set aside for this type of operation.

We don't transmit that much but do need a channel that is free of other tones so our autostarts aren't bothered.

Our state repeater coordination group does not want to get involved with simplex situations. I see that SERA does coordinate, or at least have a real band plan for the whole band. Seems to me that things would be a lot clearer if the ARRL's repeater directory would at least spell out the channel spacings in the various subbands. SOme of the country seems to be on a 15/30 kHz plan and others on a 20 kHz plan.

What ya think?

703. TRACING RADIO TRANSMISSION LOCATIONS?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-13 00:00:00 UTC
From: GCSI002@ibm.net
Message-ID: <45mosa$bu2@news-s01.ny.us.ibm.net>
Source record: 237031

The following question would be of great assistance to me... if answered.
I am writing a book, and a few scenes involve transmitting information
over citizen band and police band radio. My question is how, and if, such communications
can be traced to find the location of the transmission. Is triangulation possible as it
is for cellular phones? Any input will be appreciated.

Thanks,

Ms. Feasance

I don't know. Maybe it would. When someone like you comes along and
actually *does* any of these things, I'm sure "those guys" will let
you know. Who are "those guys", anyway? Perhaps you'd like to give
us a more complete list of "those guys"'s characteristics and beliefs,
and then identify the actual sub-set of hamdom that actually fits your
characterization? Surely there's *someone* out there you can make
uncomfortable!

All in fun, Drew. What else is there?

706. Re: Ham Radio License?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-13 00:00:00 UTC
From: jrosenw@pgh.nauticom.net
Message-ID: <DGDxyC.JLy@pgh.nauticom.net>
Source record: 237034

Travis Brodeen (wzl@primenet.com) wrote:
: How much does it cost to get the basic HAM radio license? I'm
: looking to get into it... Email me if possible.. I have a few
: questions.

Well, after several attempts, the real answer is ...

There is no fee involved for element 1a or element 2 in connection with
a test for a Novice license. There is a one-time fee per sitting
for any element beyond that, or for element 1a if you are already
a Technician and looking to upgrade to a Tech+. So, if you
take elements 1c, 2, 3a, 3b, 4a, 4b all at once (which would
get you an extra license) the total fee is $5.90. Currently, the
fee that the ARRL charges is $5.90. Other VEs may charge more or less,
but there is a maximum set by the FCC. The ARRL's policy appears to
be to charge the maximum rounded down to the nearest nickle. The
maximum this year was somewhere between $5.90 and $5.94, I am not
exactly sure where in that range it was. The fee is raised each year
on Jan 1st, based on the cost-of-living index (or, maybe the consumer
price index).

If you are new, you probably do not know this, so I will explain it
a little further. There are 6 license levels you can obtain. Each
license requires different test elements.

Novice - element 1a or 1b or 1c, and element 2
Technician - elements 2 and 3a
Technician+ - element 1a or 1b or 1c, and elements 2 and 3a
General - element 1b or 1c, and elements 2, 3a and 3b
Advanced - element 1b or 1c, and elements 2, 3a, 3b, and 4a
Extra - element 1c, and elements 2, 3a, 3b, 4a, 4b

elements 1a, 1b, and 1c are morse code tests at 5, 13, and 20 words
per minute respectively. The tests are normally of the fill-in-the-blank
type or multiple guess type tests. Allowance is normally made for one
minute solid copy as well (so many characters in a row correct).
elements 2 through 4b are written tests of increasing difficulty. They
are normally of the multiple guess type.

Passing grades normally require approxmiately 70 percent correct. They
are graded as pass/fail only. The examiners are normally prohibited
from informing you of your score outside of 'pass' or 'fail'.

The question pools for the written tests are published, and in general
each pool consists of approximately 10 times the number of questions
you will get on the test. For example, element 2 has 30 questions,

and the pool has about 300 questions to draw from.

For those experienced hams, I appologize for the regurgatation, but
I think that newcommers would appreciate this infomation.

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details
of the calculation method are available on request.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station
location becomes available.

I would like to extend the table to include the best five QSOs for each
band and propagation mode, instead of just the top one as at present.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

Or via packet: GM4ANB@GB7EDN.#77.GBR.EU
Or via e-mail: john@kirsta.demon.co.uk

>Any advice is appreciated.

These radios will draw very little current when receiving, and it is unlikely
you will be transmitting on both at once. Go for it.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 OCTOBER AND FORECAST FOR 15 OCTOBER - 17 OCTOBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 87/30

GOES satellite data for 13 Oct
Daily Proton Fluence >1 MeV: 3.2E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.5E+08
(moderate)
X-ray background: B2.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Oct 16 Oct 17 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Oct: 87/30

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 13 Oct
Learmonth 6 2121 2222
Fredericksburg 5 11
Planetary 10 10

Observed Kp for 13 Oct: 4333 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Oct 15 Quiet to unsettled
16 Oct 25 Unsettled to active
17 Oct 20 Unsettled to active
COMMENT: The field is expected to be mostly unsettled to active 16-17 Oct
in response to the M4/1F flare on 13 Oct.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Oct normal normal normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Oct normal normal normal
16 Oct normal normal fair-normal
17 Oct normal fair-normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
14 Oct 7

Observed Australian Regional MUFs:
Darwin MUFs were 15 depressed to near predicted monthly values.
Townsville MUFs were near predicted monthly values.
Sydney MUFs were near predicted monthly values, with regular spread F
observed local night.
Hobart MUFs were near predicted monthly values, with some spread F
observed.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
15 Oct 5 Near predicted monthly values
16 Oct 5 Near predicted monthly values
17 Oct 0 Slightly below to near predicted monthly values.

720. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-14 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.uJTZcD1w165w@GRAFex.sbay.org>
Source record: 236848
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

From: server@GRAFex.sbay.org
Date: Sat, 14 Oct 95 23:15:05 PDT
Message-ID: <gate.uJTZcD1w165w@GRAFex.sbay.org>
Subject: HAM-server Information

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

I recently bought a JPS NIR-12 DSP Unit. With it came the usual warranty card/owner's comments card. I metioned that the schematics in the manual were blurred and near impossable to read. Without any request on my part, today, in the mail, I received a set of schematics from JPS.

It's nice to see that someone actually took the time to read my comments and without my asking, sent schematics.

BTW if you're looking a DSP units, check out the NIR 12.

Thanks JPS, de N3IHC

: Can I connect both a 50 watt 2m radio and a 100 W HF rig to my car
: battery? Will the battery withstand this current load and will the car
: be able to recharge the battery to its full state?

: Any advice is appreciated.

Those sound like they pull about 13 Amps and 25 Amps, respectively. If you hook them directly to your battery you are going to need a long run to get back to your radios. That's not so bad for the 2m rig, but the HF rig is much more likely to could suffer with noise picked up on the power leads. To give you a short, direct answer to your question: With a 30-amp alternator, transmitting 50% of the time, for example, your car will be able to stay ahead of your current consumption, no problem. I would never turn both rigs on at the same time, much less transmit on both at once. Even with just the HF rig, you won't last long with the motor off and run the risk of not being able to start your car some day.

Now for the not-so-short answer: Don Johnson's book, *40+5 Years of HF Mobileering* recommends using 00-guage conductors for 100W HF rigs. Yup! Now if you think that's totally ridiculous, consider this. I bought 20 feet of the stuff at a Home Depot where an employee asked me how many amps I was going to run through it and where I was going to install it. When I told him it was going in my car for a 25Amp circuit he cracked up laughing. I gave him the long version. The issue is not load carrying capacity, it's noise suppression. Consider this evidence from Kenwood engineers: My TS-50 came with a power cable of course, but there's something peculiar about the cable many a TS-50 owner may have overlooked. There are four conductors running from the battery to the at-rig-connector, but at the rig end of the cable, the two conductors for the positive side of the circuit step down to a much smaller guage -- as do the two conductors from the negative pole of the battery. I submit that Kenwood is concerened about more than just moving the 25 Amp current. Otherwise, they would have a run only two conductors instead of four or they would not have narrowed the conductors before getting to the rig.

The double-ought was difficult to work with, to say the least. It's about the diameter of a dime and turns about a 12 inch radius, at best. I have it running from two 105-Amp-Hr deep-cycle batteries in the rear of my car. To connect these at either end, I drilled a hole into the center of each conductor end-on. I then inserted the 10-guage stranded leads from a one-foot length of the original Kenwood cable/connector assembly into these holes and soldered with a big torch, putting heat shrink tubing over the splices.

I have very little noise when recieving. On that note, I've got two-inch-wide, rubber-clad, tinned copper braid running from the rig to one of the floor bolts of the front seat; same stuff grounding the batteries; same stuff grounding my antenna mount. To attach the ground strap to the rig, I cut away some of the rubber insulation, folded the end of the braid in half length-wise (like my 8-year old likes to do with her tongue), and inserted this into a solid-copper lug made for 4-guage high-voltage cables. The lug has a screw-driven clamp that traps the end of the folded ground strap, on one side and a thick, flat spade with a hole in it on the other. I soldered this connection heavily, again with a big torch, even though the screw clamp was holding things tightly.

I replaced the TS-50's 4mm grounding bolt with a 4mm stud and matching wing nut. I just slip the lug's hole over the stud and spin the wing-nut on -- easy on an off with lot's of static-shedding contact surface against the chassis of the rig.

I use a $19.95 20-Meter Hamstick by Lakeview that is shunt-fed. (See figure 22 of Chapter 16, page 14 in the ARRL Antenna Book, 17th edition.) I use Lakeview's $9.95 Inducti-Match for the coil. The mount is Diamond's 3/8-thread no-holes-to-drill trunk lip mount, but I use it near one hinge at the top of my lift-back. It's very important to establish a ground plane at the same height as the antenna feedpoint. So mount the antenna at roof height - OKAY ! The sheet metal that forms the mirror image for your vertical monopole doesn't have to be under the antenna as viewed from above, although that's ideal. It's much more important that whatever sheet metal you have at your disposal, be at the same height as the feed point! How well do you think a dipole would work if you separated one half from the other (at the middle) by even a fraction of a wavelength? I think it has something to do with getting the reflected energy in phase with the direct emissions, reinforcing the signal. Another reason to use the roof top is simply to get the feedpoint as high as possible to avoid ground losses.

Well, I hope all of that helps. You may not want to make the effort, but the installation is EVERYTHING in HF mobile.

I can type faster than I can think so before I overdo it...

: 3. In the 60s and 70s they were called blacks
: 4. Today they are called African Americans

: Why all the changes?

Basic is the fact that with out bringing atention to them selves we whiteys might forget them. In the 50's BTW it was Nigger, in the 60's Martin Luther king changed that to Negroe (Which the average ignorant black considers an insult but considers King a demi-God). I bleive 70,s was black and somewhere in the 80's African-American. A friend of mine pointed out that a hyphenated nationality is for people that are born in a country and move to another country. As for the average Negroe they think they just walked of the plantation yesterday. The fFederal Government considers them "A protected Class" of people. This means that is OK for them to discriminate against other people who can discriminate against them.

> ... Joe Subich, AD8I

.....among other things.

Joe, first of all, I am one of the new Technician licensees, and I've got to disagree. My main reason for not becoming involved in amatuer radio before now is because I have cerebral palsy just bad enough to interfere with my coordination and make copying code almost impossible. As far as the simplest details regarding packet, oscar, etc., please try to remember that it's nearly impossible for someone who is new to any hobby to learn all about it overnight, although I do know a LOT of new no code techs who know these things and more. Myself, I do most of the engineering at a 5kw am station here in Atlanta, and have been involved in radio in one way or another since I started as a dj when I was 14. As far as understanding the internal workings of most new equipment, I know a lot of hams with general class and above licenses that couldn't work on an ht if they had to, so this is, again, more a reflection of a lack of experience than of stupidity, wouldn't you agree.

Joe, I would suggest you read some of the commercial radio magazines that are available, such as Mobile Radio Technology, to add to your perspective. If you do, you will understand how spectrum hungry this industry is, and why it is important to have as many licensees as possible. After all, the main thing the fcc looks at when changing spectrum allocation is how effectively the frequencies abe being used.

gotta go now, got my TH-22 tore down and the soldering irons hot.

Don't feel like the lone ranger out there my friend. I bought a Yaesu FT-416 [remember that one, it lasted about three months I think]. After I bought it, I noticed that the battery didn't fit right, and that the rubber ptt cover would come off. Come off and fly past you for no apparent reason, to be exact!! After losing the cover, I wrote Yaesu no less than 5 times before getting a response. They sent me a new cover, which left too. I tried in vain to find a glue that would stick to the silicone cover and the aluminum housing, with no luck. They finally traded radios with me, but the cover still popped off, so I finally drilled a very small hole and used a screw to hold it on. I also found that the battery will stay in place with one wrap of electrical tape. I use bright yellow, which has started a number of conversations that ended with someone saying "gee I'm glad I didn't buy one of those."

>Ms. Feasance

Monitoring and locating transmissions of any frequency range have
become quite sophisticated these days. Radio Direction Finding
is done by hobbiests (for fun) as well as by government and
professional groups. Equipment need not always be very elaborate
nor expensive, which is why hobbiests can enjoy such things
as amateur radio transmitter hunting (see my homepage), or
International Radio Sport. On the more serious side, the
equipment available for professionals is VERY sophisticated
(and expensive), but there is NO signal that cannot be
monitored and located, given time. Radio Direction Finding
at different frequencies may require different different antennas
and receivers, but they are available. The F.C.C., for one,
has some very interesting equipment that is totally concealed
in ordinary-looking automobiles. The military may use everything
from simple loops to surveillance satellites to monitor and
locate ANY frequency they desire. There are some techniques
which can be used to make monitoring and locating quite
difficult, but that is another topic.

I'd like to read your book, when it is published.

752. Radio needed for the W1AW

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-14 00:00:00 UTC
From: rw@ripco.com
Message-ID: <DGG5Gq.JLt@rci.ripco.com>

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I am trying to learn CW and am looking of an inexpensive radio to listen to the W1AW broadcasts. I would appreciate if someone could reccommend a used radio for this that can be used in an apartment w/o a outside antenna. Ideally, I would like to find one in the $25.00 to $50.00 price range, if possible.

E-mail would be best.
Thanks

Hi Rich,

Just curious. Why do you have to replace the Belden 9913 every 4 years?
I just picked up 200' of "INTERCOMP" cable supposedly better than the Belden 9913.
Do you have a water leakage problem? Do you use N connectors & PolySeal?
Or does the jacket crack? I've heard rumors about the Belden jackets.

The INTERCOMP looks well made...but I guess time will tell.

Thanks,

Chuck KD9JQ

Here in the UK our 'B' class license doesnot require any knowledge of
morse and it has been that way for quite some time, allowing operation
from 6m upwards.

The "codeless" license seems to working just fine here, but as ham radio
seems to have an image as an old mans hobby, involving boring old s*ds
sitting in dark rooms with earphones on, anything that can be done to
encourage people into the hobby has to be done. I am 23 years old and at
still at University, so I really am in a position to comment on the image
that the hobby has (the laughter is still ringing in my ears!).

Be positive about the lack of CW, with huge amounts of band space under threat here (i.e. 70cms!), we need all the ops we can get!

Subject: Re: HTX 202 and ICOM battery

WM>I have heard that ICOM accessories for the IC02AT are compatible with
>Radio Shack's HTX 202.

YES - many are, indeed.

WM> I want to get better batteries and a rapid charger.

Get an Icom CM-35 home charger, and a couple of CM-8 batteries.

OR - W&W has some excellent units! AND - they can be used with other
battery types via "cups" in the charging base.

WM>...high voltage batteries and HTX-202s...

Some people have experienced a problem with 12VDC and the standard
rubber duck combination. (Actually - there are more "rumors" and the
like on the subject from many who have NOT actually experienced the
problem. Be careful of your sources!!!)

I have regularly used a Quantum Ham Battery with my HTX-202 and (a)
supplied antenna and (b) other antennas, WITH NO PROBLEMS WHATSOEVER.

I have also used my HTX-202 with a 7.2AmpHour 12VDC pack with standard
antennas, WITH NO PROBLEMS WHATSOEVER.

I have also used a Periphex BP-7S (CM-7S) 13.2V 1200ma nicad battery on
my HTX-202 WITH NO PROBLEMS WHATSOEVER. (Well, I take that back. There
was no FUNCTIONAL problem with this combination...but it doubles the
SIZE and WEIGHT of the HTX-202 - that particular Periphex is a
monster!)

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 226
BID: $OPDX.226
October 16, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1KNQ, KC2X, ND3A, KC7V, KF8AY, K8PYD, K0IR, DF4RD, DK7PE, F6AJA, JA0VSH, JH2PDS/1, OH1JJS, ON4UN, ON4AKL and ZS1CM for the following DX information.

5R, MADAGASCAR. Ben, 5R8DS, is still active, and he is now camped out in an empty house prior to departure to The Netherlands on November 1st. His activity still continues to be chirping away in the AMTOR mode and CW/SSB. This past weekend he was heard on 14015 kHz around 1910z, on 24901 kHz around 1319z and on 18140 kHz around 1408z. QSL via PA3BXC (his home call): Ben Witvliet, Sleedoorn 65, Emmen - 7822an, The Netherlands. All QSLs will be answered (if direct with a SASE or via the buearu).

8Q7CW DXPEDITION WRAP UP! OPDX received a fax from Rudi, DK7PE, on the details of his recent 8Q7CW activities from the Maldives between September 25th to October 2nd. Rudi states he concentrated mainly on the low bands (160-30 meters) and made a total of 2400 contacts. Despite the heavy QRN, which is usual in the tropics, low bands conditions were good and he made about forty 160 meters contacts into North America. Signals on 160 meters were covered by noise and sometimes it wasn't easy for Rudi to pick out callsigns. Rudi states this was due to the lack of a proper receiving antenna and there was a problem in erecting a better one. For only one night, he was able to use a 150 feet beverage antenna, but unfortunately, not for the whole operation. He also tried a RX-Loop antenna, but the results of this design didn't impress him. Rudi mentions that his 8Q7CW callsign was issued at least one time before, so all QSL for this operation only go to DK7PE.

9R, REPUBLIC OF ZAIRE. Alex, 9Q2L (PA3DZN)), will be operating as 9R1A during the CQWW SSB Conetst (October 28-29th) as a Single Op/Single Band entry (The band was not mentioned). QSL via PA3DMH.

9U, BURUNDI. F5FHI, EA1FH will be very active during the CQWW DX SSB and CW Contests on all bands (including 160m). Details of callsigns were not

mentioned.

HK0, SAN ANDRES. KH8AL, NL7GP, JI3ERV and JH1NBN will be active October 27-29th and will sign KH8AL/HK0 during CQWW DX SSB Contest as a Multi/Multi entry. QSL via JH1NBN.

NEW QSL ADDRESS. Please note the new address for QSLs for the following operations: ZD8VJ ZD7VJ 3D2VJ T20VJ A35VJ 5W1VJ ZK2VJ KH8/G4ZVJ AH8F HS0/G4ZVJ DU3/AH8F ZD80V ZD88V GB5VJ. QSL to Andy Chadwick, G4ZVJ, 5 Thorpe Chase, Littlethorpe Road, Ripon, North Yorkshire, HG4 1UA, U.K.

OT5, BENGIUM (CONTEST STATIONS). Luc, ON4AKL, states that the NOL contest team, member of UBA, will be active during the 1995 CQWW DX SSB CONTEST, from the new contest QTH with the special callsign "OT5L". They will be a Multi/Single entry and will be active on 160-10 meters using beam antennas from 40 through 10 meters, a 4 element vertical array for 80, and a 90 ft. vertical for 160 meters with special receiving antennas for the lower bands. QSL is to ON6NL via bureau or CBA.
John, ON4UN, reports that OT5T will be operating as a Multi/Single in the CQWW DX SSB Contest with operators ON4AFZ, ON6UK, ON7LX and ON4AAM. Activity will be on all bands.

S9, PRINCIPE ISLAND. F5OGL, F6AXX, F6BQY, F5HX, F6HHV will be active as S92P from (IOTA AF-044) from November 21 to December 6. Their activity will be on all bands (include WARC) on CW, SSB and RTTY. They will also be active during the CQWW DX CW Contest. QSL via F6KEQ.

SV9, CRETE. Jukka, OH1JJS (aka OH6LI), will be on a vacation trip to SV9-land during October 22nd to 29th. His activity will be on all bands 160-10 meters (maybe 6m) including WARC, operating CW & SSB if the Hotel owner allows him to install his antennas. No RTTY is planned this time. Jukka will bring full size antennas for 80 and 160 meter bands.

TK, CORSICA. Members of the TK-Contest-gang and the Bavararian Contest Club will enter as a Multi/Single effort from Corsica during the CQWW SSB/CW Contests in October and November 1995. Callsign for both contests will be TK2C. The QSL-Manager for both operations will be DF7RX - Bernhard Steibl, Kelheimwinzerstr. 40, D-93309 Kelheim, F.R.G. All cards will be answered direct and via bureau. Operators for the CQWW DX SSB Contest are: TK5EP, TK5NN, TK5MH, DK2OY, DK6WL, DF7RX and DF4RD. Operators for the CQWW DX CW Contest are: TK5EP, TK5NN, DL2NBU, DL6RAI and others
The SSB-Team will arrive in Ajaccia, Corsica, the 25th of October and spend the days before the contest installing all antennas and equipment. There should be some activity before and after the contest. Detailed information about the CW-Team following later.

TY & 9G, BENIN and GHANA (Contest Expedition). The contest team of G3SXW, GM3YTS, K5VT, KC7V and N7BG will enter as a Multi/Multi effort from Benin for the CQWW CW contest in November. They plan on using the callsign TY5A. The team will arrive in Accra, Ghana, and spend a few days of low key operating, all CW, focusing mainly on the low bands. This operation will take place around November 18th to 20th. The operators and their 9G

callsigns are as follows: G3SXW/9G5SX, GM3YTS/9G5RF, K5VT/9G5VT, KC7V/9G5MF and N7BG/9G5AR. QSL each operator to his home call.
The personal calls for each operator and their TY callsigns are as follows: G3SXW/TY5SXW, GM3YTS/TY5RF, K5VT/TY5VT, KC7V/TY5MF and N7BG/TY5AR. QSL each operator to his home call. Personal TY calls will be used for a day or two before and after the contest. The QSL manager for TY5A is: GM4AGL - Bill Ferguson, 72 High Park Sail, Erskine, Renfrewshire, Scotland PA8 7HX. There will be a Web page for the operation. They plan on keeping in touch by E-mail for comments. For more information on the TY5A operation, you can visit the Benin DXpedition home page: http://www.getnet.com/~kf7ay/cqwwty.html.

V2 & VP2M, ANTIGUA AND MONTSERRAT. JH1NBN will be at these locations on a family vacation November 23-27th. His callsigns are unknown at this time, but he will operate almostly SSB with some CW. Check mainly on 14200 kHz. QSL via JH1NBN.

V6, MICRONESIA. Tak, JE1SCJ, and Kuzu, JA0VSH will be active as V63YT and V63KZ, respectively, from Pohnpei during October 20-25th. The operations will be CW and SSB with activity on 160-6 meters including WARC bands. Kuzu mentions that during their evening hours they will not be able to operate SSB because of the hotel's circumstance. The suggested frequencies for 160 meters is 1824.5 kHz for USA/JA or 1827 kHz for EU. QSL via each homecalls direct or bureau.

VK9/CH & YB0, CHRISTMAS ISLAND AND INDONESIA. Ron, ND3A, will be departing on a business trip to Jakarta on October 16th. He will be in Jakarta for approximately 3-4 weeks and then plans on taking a one week vacation on Christmas Island. From Jakarta, he will attempt to operate as YB0ASI (at AA4U's station) during CQWW SSB (But he is not sure if he will or for how long). QSL his YB0ASI operation to WA4FVT or via the QSL bureau. From Christmas Island, Rob states he has the license in hand and will be using the callsign VK9XRS. He will attempt to operate 160-10 meters and will mainly concentrate on CW. If the timing works out, he may even be active during CQWW CW Contest (But doesn't know for sure at this point). QSL for this operation via ND3A.

VK0, HEARD ISLAND (UPDATE). Ralph Fedor, K0IR, reports the 1995 Heard Island DXpedition remains on schedule. 3Y0PI team members ON6TT, KK6EK, HB9AHL, and K0IR will be joined by JH4RHF, N6EK, PA3DUU, and RA3AUU. The advance team of PA3DUU and ON6TT will arrive in Perth, Western Australia, on October 22nd. The rest of the team will arrive one week later.
A sea container holding most of the expedition's equipment arrived in Australia on October 12th. Shipments from Canada and Easter Island arrived earlier. A final shipment from Belgium will arrive in Perth in a few days. All cargo will go aboard the expedition's ship for a November 1st sailing date.
The innovations tested on Easter Island (XR0Y) will be used by the Heard Island expedition team. A beacon (VK6DIR/MM) will be activated as the ship weighs anchor and will remain on the air until we are active from Heard Island. They will maintain a home page on the World Wide Web, operate a

call sign look up service to allow you to see "if you are in the log,"
and distribute e-QSL's. Details on accessing and using these services will
follow.
They expect to arrive at Heard Island on about November 12th. The
sea and weather will dictate how soon they get on the air. They expect to
be active until their December 1st departure, using CW, SSB, RTTY, and
satellite communication. QSL's are via W4FRU. ADDED NOTE: The above text
was an edited excerpt of K0IR press release. The complete press release
will be distributed via the OPDX Mailing List.

ZF, CAYMAN ISLANDS. Operators Jack/K1KNQ, Rich/KJ4WC and Steven/K7LXC
will be operating from Grand Cayman as ZF2DX during the CQWW Phone
Contest as a two station Multi/Multi entry. They will be operating from
ZF1EJ QTH. QSL via K1KNQ.

ZL7, CHATHAM ISLANDS (UPDATE). Jon, WB8YJF, using the callsign ZL7CW and
Leo, K8PYD, using the callsign ZL7PYD will be active in the CQWW CW
Contest. Their tenative plans are to leave Columbus, Ohio, on November
19th and arrive at Chatham Islands on November 21st (4 PM local time).
This will allow for operations over the USA Thanksgiving Day holiday
in preparation for the contest. Operations will be on CW, SSB and RTTY
with activity on all bands 160-10 meters including the WARC bands. Jon
will leave on November 28th to return home, while Leo will stays on for
the 160 Meter Contest the following weekend. Leo will leave on December
8th. All QSLs should be sent via the home callsigns. They report that
licenses are currently in hand and accomodations are confirmed. Their
plane tickets will be issued shortly.

Excerpts and distribution of The OPDX Bulletin are granted as long as
KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS
online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with
the Sysop or send InterNet Mail to one of the three following addresses:
kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which
shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring (the second ring should
be a false ring from the fax/data switch box) and then dial four quick
ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every
second will not have to do this step.) 3) The phone will pick up and
after the "BEEP" leave your voice message or FAX.

>
>Any advice is appreciated.
>

Yes. (Make sure to put fuses in both sides of each radio lead, and use heavy guage wire, for best performance.)

Will the battery withstand the load? I hope so. I would be very surprised if there is a ham rig on the market today that has a key-down current draw equal to a cranking motor (starter).

The question isn't really whether the battery will handle the draw - cranking can reach 500 amps on some cars in certain conditions - but whether the battery can handle the drain. If you intend to operate the HF rig extensively you may have a problem with discharging the battery beyond the point where the charging system can recharge it. You may want to consider installing a 2nd battery and an isolator if you have the room.

You would have to spend a lot of time on high power on 2M alone to kill the battery, if all is in good shape.

Hope this helps...

YMMV

Does anyone know if you can still get a clock which automatically
syncs in to and received the time from the NIST WWV radio signal?
I remember a long time ago that Heathkit sold a unit with a digital
display, but I was too cheap at the time to buy it! Now I really
want to get one.

Thanks...

I need to disagree with Mark... While the major openings are May-July, there is also a winter season from November-January. A buddy of mine worked Utah and Nevada today, several hundred miles away. If we don't get on the band, then there will be no opening, will there...?-)

>73's and Good Luck on your test!

I agree with Mark on this one!-)

: fair, so we do NOT sell our mailing list.

So, then why collect the information? This is not the first time this thread has been aired here, and will probably not be the last. It would seem to me that RS management would have gotten the clue by now that this is a *major* irritant to their customers, and would consider abandoning the policy. Maybe enough of us have not complained to the folks at the corporate office; it does not good to complain at the local level.

As others have pointed out, the dated sales receipt is proof of purchase, with or without a name.

I seem to be having some trouble with my new Kenwood th-79a(d). The sound coming out of the 2 meter side is real weak. The other side, 70 cent. is fine. I brought the radio back to place of purchase, Amateur Electronic Supply, and the floor model they have is the same way. If there is anyone else out there that has the same problem, please get back to me.

I appreiate any help, or information. Respond to email, browne@en.com

776. TS-850S TX REPAIR

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-15 00:00:00 UTC
From: tom.alldread@minfox.com
Message-ID: <95101518202131265@minfox.com>
Source record: 236861

Greetings to All:

I sent this message out a couple of months back and I have subsequently repaired the problem. I was asked in some responses to post the information regarding the ultimate repair of the problem.

==========

Recently my TS-850S developed an intermittent transmit failure. After four attempts to diagnose the problem I have found that the DDS carrier unit which generates the RX BFO and SSB TX modulator carrier of approximately 455 KHz is failing during transmit.

When it fails the IC4 YM6631 chip output shifts to approximately 3 MHz during transmit as opposed to remaining near the required 455 KHz frequency.

According to the block diagram the IC4 DDS chip receives instructions from the main micro-processor which I presume sends commands to order the required frequencies for the USB, LSB, RTTY and CW modes. AT this point I do not know if the DDS chip is at fault or if it happens to be receiving the wrong commands from the micro-processor.

I have recently ordered a service manual which may provide additional information.

I have the following questions:

1) Does anyone know what the YM6631 is? The chips are stamped with the Kenwood name so I believe they may be custom made. If there is a generic replacement with data sheet information available that information would be most helpful.

2) Does anyone know the details of the microprocessor-DDS command communications? I believe it must be a form of serial communication probably sent on the PCK line to pin 61 designated SC(serial communications??). Possibly this data line which is commoned to all 4 carrier DDS chips uses a common micro-controller interface standard with addressing for the chip selection. I am able to capture some of the data with my storage scope but I need to know the pulse train addressing and data details to determine if the micro-processor or DDS chip is at fault.

3) When I called a parts supplier to find out the cost of a replacement carrier unit PCB I was told that they are currently on back order which may suggest that others have had similar failures. Has anyone encountered a similar problem with a TS-850S and if so what was replaced to correct the problem?

4) I wonder if anyone has had problems with solder joints or connectors with a TS-850S?

Thank you in advance for any helpful information regarding this problem.
==========

When the service manual arrived I found it did provide a basic description of the data communications protocol (which I believe is similar to the IIC serial data interface standard). I found, however, that since the pulse stream (which included binary address and TX/RX frequency information for all four YM6631 chips) was very long I could not obtain a display on the storage scope CRT with sufficient resolution to really tell if the commands from the main controller were correct or not. Unfortunately I do not own a logic analyzer which is what I needed.

Finally I came to the conclusion that since the other 3 DDS chips were receiving data ok off the same buss that probably the data for the malfunctioning DDS should also be ok.

I also noticed that the malfunctioning DDS was tardy in locking up even in the receive mode compared to the 3 functional DDS chips. I could tell with my scope when the initialization commands were sent and could see the functional DDS outputs almost instantly lock after receiving the command string. The malfunctioning DDS took a second or so to lock. From this I concluded the YM6631 DDS chip was probably defective as the lockup time should not be related to the reception of commands from the micro controller board.

I subsequently ordered a new YM6631 from Kenwood Canada who had one in stock in Toronto. When I received the replacement I noticed a number change on the chip. The new chip was numbered YM66312. This leads me to believe the original YM6631 design has be revised which makes me wonder if there has been a reliability problem with the earlier generation of DDS chips.

The YM6631x chips are about 5/8 inch square and are 64 lead surface mount devices. My finest soldering iron tip was barely small enough to heat the leads individually! I removed the old chip by carefully prying up one lead at a time with a small jewellers screwdriver a moment after applying heat with the iron. I would not have tried this without a magnifying light! After very carefully centering the replacement chip I heated the leads one at a time and pressed them down with the jewellers screwdriver. I was able to successfully solder the new chip in place without adding any new solder. I checked and double checked for continuity and bridges with my trusty digital meter.

777. TS-850S TX REPAIR

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-15 00:00:00 UTC
From: tom.alldread@minfox.com
Message-ID: <95101518202131266@minfox.com>
Source record: 236862

(Continued from previous message)

This was a tedious task that I would not recommend for someone that is
not into soldering!

Upon putting the PCB back in I was relieved to see my 850 jump
back to life when I powered it up. After 5 weeks it is still working as
good as new.
The service manual cost about $70 and the YM66312 about $65
(Canadian funds).

I wish to thank those that responded to my original posting and
although I hope this information is not needed by others I have provided
it just-in-case. The usual non-liability information applies.

[948]

The following is a QST

Repeater coordinators meet in St. Louis and change the very
basis of repeater coordination. Also more on the aftermath of
Hurricane Opel and another Big MACC attack. These stories and
more
on Newsline report number 948 for release on Friday, October 13,
1995 coming your way right now!

(*****
REPEATER COORDINATORS MEET

The nations repeater frequency coordinators have met with the
ARRL and the FCC in St. Charles, Missouri. It was a politically
charged meeting that has changed the face of VHF operation
forever. This is because there is now a tentative agreement by
which the American Radio Relay League has tentatively agreed,
subject to board approval, to represent the nations coordinators
to the FCC. This, in exchange for the commission recognizing the
work of the coordinators and possibly making their decisions
binding on the ham radio community.
The meeting was held at the Best Western Noah's Ark motor hotel
not far from the St. Louis Airport. About fifty of the nations
sixty five recognized repeater coordinators were present. Also in
the room were representatives of packet radio, amateur television
and other modes that use the VHF and UHF spectrum, but from the
outset it was made clear that this meeting was to discuss the
problems of FM voice repeater coordination only. Even though he
was there unofficially, the tone of the meeting was set by the
keynote speaker Ralph Haller, N4RH, Deputy Chief of the FCC's
Wireless Telecommunications Bureau:

"I'm particularly delighted that all of you have taken time
from your schedules to be here and you have shown so much interest
in this matter, that you would come to St. Louis on a Saturday.
I would like to ask that we try to stay focused. In talking to

you, I know a number of you in this room have lots of other concerns. Enforcement, changes in the volunteer examine program, but that is not what today's meeting is about. Today's meeting is to talk about frequency coordination. An opportunity to get to really get to know each other. And it's an opportunity to bring frequency coordination to yet a higher plateau. So during the day let's stay focused on the real issue of why we are here. Let's not get side tracked on other issues that can easily take up the day. Let's stay focused on frequency coordination. This is a truly historic day in the history of Amateur Radio." Haller, N4HY

Historic yes, but not without its problems. For a while, the entire proceeding seemed to be slipping away as the political differences between various coordinators and between some coordinators and the ARRL took center stage. As a result, much of the early discussion derailed into matters of finite detail rather than the general picture that Haller had requested. So, not unlike other legislative bodies in a state of conflict, the group recessed. It was when the meeting reconvened that headway began. Owen Wormser, K6LEW, the president of the Mid Atlantic Repeater Council was the person who brought it back on track:

"For the sake of a beginning can we agree that those that are listed in the current ARRL Repeater Directory as coordinators for their specific areas etc. are in fact the baseline from which we can begin. Perhaps, but not the final solution, perhaps not the end of it, but can we agree that that is at least the beginning. Because where the next point goes is, if that is agreed then we have something else to say. And that is that in the longer term our objective is to produce the white paper which will be delivered by a committee from this organization. Not an ad hoc committee. This is our organization. So our committee will deliver to Mr. Haller the white paper. That white paper out of our consensus down stairs will address the specificity of a single point of contact, an organization, not a single individual paralleling very closely the commercial representation to the FCC in the form of a single point of contact. And that in order to get some recognized coordinators to single point of contact, there is a lot of specificity that must be put into this white paper." Wormser, K6LEW

Owen Wormser set the stage for the group to arrive at a consensus, but it would be many more hours before this would happen. A turning point came with the comments of Jim Fortney, K6IYK, who chairs Southern California's 220 MHz Spectrum Management Association. If Owen Wormser gave the assemblage its direction, it was Jim Fortney that added purpose:

"It has become very clear to me and I hope it would be clear to the majority of the rest of you, that the environment that the FCC finds itself in no longer allows us to use the methods and

techniques that we have used in the past to deal with them. And that in fact that we better look at some new approaches. And one of those approaches that is being used elsewhere and has been suggested from a variety of directions that would be advantageous to us is if we, and I am talking about amateur radio, not repeater coordination necessarily, but amateur radio in total, we amateur radio had someone who represented us to the FCC." Fortney

Discussions and debates lasted another four hours. In the end it was decided to name the American Radio Relay League as the single point of contact, or spoc, between the nations frequency coordinators and the FCC. A committee chaired by Owen Wormser, K6LEW was empowered to draft a white paper setting forth the goals of the spoc. This paper will be circulated to all the nations recognized frequency coordinators listed in the ARRL repeater directory for comment before a final version is submitted. All of this seemed to please the FCC's Haller:

"Clearly this afternoon, I think tremendous progress has been made. And I look forward to continuing to work with this group and your representatives who will ultimately be working with us directly in Washington. I think this is a giant move forward for Amateur Radio and I think it says a lot that all of you come here with such diverse views and in the course of a few short hours reach this kind of consensus." Haller

There is still a lot to be done before recognition of the work of coordinators becomes reality. Two of the biggest hurdles are drafting a white paper acceptable to most coordinators and for the ARRL's Board of Directors to vote on whether or not it really wants the spoc job. The latter will happen in mid January. But assuming both of these tasks are accomplished, it may eventually mean that the average ham, people like you and me who simply operate FM with a mobile rig or an HT can be assured that the day of the so-called pirate repeater will come to an end. That our ability to communicate through our favorite repeater with a minimum of interference from another uncoordinated and unwanted repeater on the same channel pair, will be assured. And from a users point of view, what more can an FM enthusiast want.

(*****
NEW MACC MEMBERS

Also making news in St. Charles is an announcement by the giant Mid America Coordination Council. The big MACC, as it has become known, has swallowed up two more regions. Not surprising was the decision by Eastern Washington state and the Idaho Panhandle to fall under the MACC umbrella. What caught everyone by surprise was an announcement by California's Northern Amateur Relay Council that it too was joining MACC. Don Smith, W6NKF, the President of NARC says its time that hams in California drop their isolationist policies:

"The way that coordination and everything else is going to go. If we have a united front, we have a better of than if we are a bunch of splinters. And I think we need, in this point in time, a united front." Smith

Does this mean that Southern California is next? Probably not. This is because frequency coordination in Southern California is by several different organizations acting as caretakers for various repeater subbands. Also, there is the turmoil on two meters as to who really is the frequency coordinator with nine groups challenging the long term coordinator for that position. Southern California will have to solve a lot of regional problems before any umbrella group will bother to give it an ear.
Meantime, the Mid America Coordination Council is now a consortium of 22 amateur radio frequency coordination entities serving 18 states and portions of 3 others. Each entity is autonomous within the MACC organization with all MACC frequency coordination policies and guidelines being advisory only. In addition to providing mutual recognition of frequency coordinators, MACC provides in house technical assistance and dispute mediation to those regions and entities requesting such services.

ARRL SEEKS ENFORCEMENT ACTION

In what might be considered as a related matter, the ARRL may be headed to congress to try and force the FCC to enforce the Amateur Service rules. At least the rules that govern willful and malicious interference.
According to Minute number 3.1 of the recent Executive Committee meeting, on a motion presented by Director Joel Harrison, WB5IGF, League President Rod Stafford, KB6ZV has been directed to appoint an ad hoc committee to -- and we quote -- "develop objectives and strategies to achieve legislative solutions to the problem of inadequate enforcement."
This action was prompted at least in part by a report to the committee by League General Counsel Christopher D, Imlay, N3AKD. In his report, Imlay reported that progress on two egregious cases of repeater jamming have proceeded far slower than had been promised by the FCC staff. N3AKD also noted that the announced closings of FCC field offices along with staff cuts appear to have contributed to a deterioration in morale.
The FCC's internal problems not withstanding, the ARRL appears to have concluded that the commission has a constitutionally mandated responsibility to the American public. And since radio amateurs are a part of this constituency, the FCC has an obligation to enforce the rules it makes. If the agency fails to do so, then legislative action may have to be taken to make it happen.
Also noted in the committee minutes is RM-8626, a petition by W5YI Report publisher Fred Maia of Arlington, Texas. Minute 3.6

says that the petition which would outlaw most one-way high frequency transmissions was strongly opposed by hundreds of commenters and should be, dismissed.

(*****
OPEL FOLLOW-UP

If you've ever wondered just how helpful amateur radio can be during disasters, look no further than the Gulf coast. With Hurricane Opal pounding northwest Florida and southern Alabama, amateur radio operators found their services and resources in great demand.

On 75 meters, hurricane disaster nets are in full operation. Some amateurs are on the air around the clock while Opal slams ashore near Pensacola October 4th. Emergency communications on HF are just one of the services amateur radio operators provide. Central Alabama's VHF and UHF amateur frequencies are full of storm related traffic. People fleeing the hurricane arrived in Birmingham to stay in Red Cross shelters. Boyd Bradshaw, KB4GDN, was part of a communications effort starting at 7:30 Wednesday morning October 4th, an effort in part to help the Red Cross:

"They had approximately 12 shelters set up in the Birmingham area. We provided some communications to shelters that did not have telephones due to flooding the previous day. The net stayed in session until 2:00 AM the next morning. We were constantly taking damage reports and relaying those to the AMA Office and also relaying the position, status and what to expect to in the□ weather because most people were without power." Bradshaw

Power was a problem for the Red Cross at its hurricane staging center just south of Birmingham. The center is located in a shopping mall and has no backup power. When the lights went out, so did the phone system. Amateur radio came to the rescue with members of the Birmingham Amateur Radio Club bringing in the Club's 10-thousand watt generator. The generator provided power until commercial electricity could be restored. Radio amateurs worked closely with Alabama emergency management agencies, forwarding damage information and even a report of a tornado which the National Weather Service was not aware of.

Hurricane Opal brings a lesson about emergency preparedness to amateur radio. Opal caused one of the worst power outages the state of Alabama has ever seen. In fact, nearly a quarter of a million customers were without power three days after the hurricane hit. Many of the hams relaying emergency messages were able to do so only because they had emergency power.

(*****
ST CROIX TRAFFIC

Another recent tropical storm is still in the news. Robert Puharic, WF3H, says via packet that he monitored Federal Emergency Management Association communications on 14.776 MHz passing messages into ST Croix following Hurricane Marilyn. He then called FEMA in Washington, DC to find out what the conditions are for getting traffic into the islands.
In true bureaucratic style, a FEMA spokesman told WF3H that the Washington office was unaware of personal traffic going into the islands on HF. He was also told that if he had questions about people in the islands to contact the Red Cross.
Oh yes. We forgot to mention that WF3H had already spent a day on 20 meters running traffic to the hurricane devastated region!

(*****
IMAX IMAGES OF SHUTTLE-MIR AVAILABLE VIA INTERNET

Hams with Internet access will find several dramatic new images highlighting the historic docking of the Space Shuttle Atlantis and the Mir space station are available on the world wide web. The high resolution images show crew activities and views of Atlantis taken from Mir recorded using a 70-mm IMAX camera. Links to the collection can be found on the "Today at NASA Home Page" on the world wide web.

AMSAT-NA BOD ELECTION RESULTS□

Bill Tynan, W3XO, Dick Daniels, W4PUJ, Junior Torres de Castro and Bob Meyers have been elected as Directors in Amsat North America. A total of 1491 AMSAT members cast ballots in this year's election.

(*****
ED STULKA, W4QA - SK

Ed Stluka, W4QAU, has died. Ed started his space career as a test engineer on Explorer I, America's first satellite. He put his ham skills to work to develop a mobile tracking station that was instrumental in getting data from the satellite during its early passes.
Ed also worked on the Apollo program and was one of the lead engineers on the Boeing IUS upper stage flown on the Shuttle. Ed Stluka was 67.

(*****
ARRL PHONE CHANGE

The ARRL has new phone numbers as the result of an area code for Newington. The Prefix has changed to 860 but the previous area code, 203, will continue to work until September 1996.

(*****
DX

In DX, EI4BZ, informs us that he hopes to go mobile and activate some squares each Tuesday evening on 80 meters from 19:00 UTC. He adds that other mobiles are welcome to join in for a contact. QSL as directed.
And interest in the Worked All Ireland Award continues to grow. Quite a few amateurs are now operational on or around 3.670 MHz from 19:00 UTC time most evenings. If you are in the shack, do give a call on 3.670 as recent activity has seen up to twenty operators on the net.

(*****
ARRL HONORS NY HEROS

The American Radio Relay League has given its highest possible honor to a New York area radio amateur. At its September 16th Executive Committee meeting in Albuquerque, New Mexico, the committee voted unanimously to present its National Certificate of Merit to Henry Borawski, KB2PFP. This for -- and we quote -- "the bravery of his actions in responding to the World Trade Center bombing."
According to ARRL Hudson Division Director Steve Mendelsohn, WA2DHF, Borawski used Amateur Radio to assist citizens trapped inside the World Trade Center after the bomb went off. Mendelsohn who sponsored the Borawski nomination says that the award was given in recognition of the professional manner in which KB2PFP performed his acts of heroism.
At the same meeting, the Executive Committee also took note of the heroic efforts of numerous Long Island, New York hams who donated their communication skills is assisting firefighters beat back a six thousand acre blaze. The committee singled out three hams, Section Manager Rick Ramhap, N2GQR, Section Emergency Coordinator Mario Maltese, WF2T and Suffolk County District Emergency Coordinator Andrew Feldman, WB2FXN, for special praise.

NEWSLINE LISTENER SURVEY

A reminder of the Newsline bulletin stations during the month of October. Handling the survey is Dale Cary, WD0AKO. If you are a regular Newsline listener, please take a moment to jot down on a post card or QSL card:

1) Your name and address.

2) The callsign of the repeater or bulletin station issuing Newsline in your area.

3) Its frequency or frequency pair.

4) The day of the week and time of day that Newsline gets□ played.

Then mail your report to:

Dale Cary, WD0AKO
1310 34th Avenue South, suite 103
Moorhead, Minnesota
56560-5162

Or you can e-mail your report to Dale via the Internet to:

wd0ako@rrnet.com

We will run the survey through the end of October. If all goes as we hope, by Christmas we will post a complete list of stations airing Newsline to our various sites on the Internet and to our home page on the World Wide Web.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

For now, with Bill Pasternak, WA6ITF at our editors desk and Dale Cary, WD0AKO at the survey desk, we say 73 and we thank you for reading Newsline.

Sandy:

A well thought out response. Let's hope that all of us can get around to not considering skin color (or many other characteristics) when we speak of others. It's just not important, to me at least.

Burt:

I was just trying to get a small point across - that we don't really need to classify people by something as insignificant as skin color.

And by the way - how are things down there on the beautiful Cape? I grew up at the other end of the state - Springfield and still miss the trips to the shore.

I'm looking for recommendations for dial-up BBSs that offer ham software to new callers on their first call. I have had many email requests for KaWin from hams who don't have Web or FTP access to the net and would like to be able to post current versions of the distribution files to such a BBS for their reference.

Your recommendations, please?

Robert, what model is that Hallicrafters??? I dont recall they having a xtal only 6mtr rig...but then my memory is getting old (eerrrr older!!! Im only 37 damn it!)

50.22 is in the middle of the SSB band...AM is typically 50.4 to 50.8 on 6 with 50.4 being the calling freq..

On AM, most users are horizontal...not vertical...though in skip conditions, it really wont matter anyway. You'd be surprised what 2 watts can do on 6 when the band is open...I worked TX to Ga on 6FM with an OLD Motorola LUGGYTalkie that ran 1 watt out....on 22v batteries...

796. Vanity Callsign Status

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-15 00:00:00 UTC
From: tjroman@ix.netcom.com
Message-ID: <45roqj$abe@ixnews3.ix.netcom.com>
Source record: 236881

Does anyone know the status of the FCC vanity callsign program? In particular, I would like to know if the date has been set for opening the first gate - for recovering callsigns of deceased relatives. Also, what the status is for the new form 610V.
Thanks,
Tom WB2SCW

Here's another approach- for around $300 you can get a new GPS receiver
(such as the Garmin GPS45, you may also be able to find used Motorola PVT-6
units for around $150) and get accurate times that way.

There are also shareware programs for the Macintosh for setting the time of
Macs on a network. I've got one machine with a PVT-6 hooked up to it running
a hack that checks and updates the system clock periodically. It's also the
"master" for the time setting code- other machines run the client part of
the program on startup.

cheers-

> You may contact them at:
> 800-867-2629.

Times Microwave LM400 uses the same connectors as 9913. It gets its
flexibility from using a copper clad aluminum center conductor. It also
uses a foam dielectric as opposed to the air/spiral of the 9913, which
gives you a little better performance (lower losses), and a greatly
reduced ability to imitate a garden hose.

I'm using both 9913 and LM400- the jacket on the LM400 looks like its
holding up better to the weather (harsh as it is here in Silicon Gulch).

I'm definitely a satisfied user-

It's a Hallicrafters model SR 46, it has 4 crystal positions and an external
BFO (which I don't have) for the transmit side, and a completely tunable
(50 to 52, and 52 to 54MHz) receiver. You can "spot" the TX crystals
to calibrate the receiver. It can run off of 12V DC or 117V AC (it has
a vibrator chopper thing inside).

program?

: Greg, KD4HZ

Mike tracy of the ARRl dforwarded me the report and order which goes into
effect on November 17. Basically, the system gets implemented as the FCC
wihsed, with the notable exception that relatives of deceased amateurs
must request a callsign which is within their class of operation. In
other words, if you are a Technicain but a deceased relative has an Extra
class call, you cannot get his call.

Additionally, amateurs will not be able to request calls from the group
from American Samoua, Pueto Rico, Aletc, since these are much more
limited in numbers.

As for when the forms will be available and when the sytstem will start
the gates, that still remains to be seen.

Try running a couple good ground straps from the exhaust system
to the chassis, place one at the front and one at the very end of
the system.. Be sure to get a good clean ground on both the
exhaust system and chassis ground..

>As others have pointed out, the dated sales receipt is proof of purchase,
>with or without a name.

Unless the item has been sold to someone else. Then that should
void the warrantee. Electronics folks are swappers and sellers of
their gear - RS should not have to honor a warranted item if it's
not in the hands of the original owner.

If RS thought asking for a buyer's name was bad for business, then
they would drop the concept in an instant. The folks complaining on
here are a tiny tiny fraction of their repeat customership, yet these
folks continue to shop there - no one has stopped their buying of
RS items.

It amazes me how folks worry about such non-problems so as to raise
their bloodpressure. Here's something that's *really* worth worrying
about: 35,000 children die daily worldwide from starvation. (United
Nations' statistic.)

Rich,

Perhaps I was out of touch when we converted from common law, ie. innocent until proven guilty, to the Napoleonic Codes ie. guilty until established innocent. Or perhaps you should repeat civics.

O.J. was not proven guilty in a court of law ergo IN THE EYES OF THE LAW he is innocent. Your opinion or prevailing public opinion does not affect the legal situation. The jury found not guilty thus agreed with his plea of innocent.

This has nothing to do with amateur radio so lets let it drop.

Source record: 236813
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment

Fellow amateurs.

Can I use a 12 volt deep-cycle marine battery to:

1. Power my HTX202? If so can I use the same guage wire that I use
with the gel cell? Pardon my ignorance but the battery is so big
compared to the HT. The battery runs the 12 volt system in the
camper.

2. Power my Radio Shack 30 watt power AMP? The AMP draws 6 amps
of current continous and I think the in-line fuse is
8 amps. I bought a regulated power supply from Radio Shack
that pops its breaker at 2.5 amps. It is ok for packet
but voice draws too much. The supply gives 13.8 VDC steady.
The battery would give probably 12.5 VDC and slowly drain off, obviously.
Any problem with that? Again does the guage of the wiring
make a difference?

Finally, I built a 2 meter ground-plane antenna from 12 guage wire
and a RO-239(?) connector. It works well off my HT, but would like
to use the AMP to it. Would 30 watt power hurt it? It has one
verticle radiator and two radials.

Welcome Bob, now what class are you? It makes a difference on what equipment
you buy. There is no use buying an FT-840 (Nice Yeasu HF rig without a lot of
bells and whistles) if you are a Tech. A tech Plus can use it nicely on
80,40,15,10 CW and 10 phone. (It is a little wide on CW receive, but I found
that if you do a little shifting of the recieve you can get by, Or get a DSP)

Glad to have you with us, (now the pitch) BTW, are you in a club??? What part
of the country are you living in? ;-)

all the best (signals),
Mike KB9KFE

Absolutely No problem here, but I have been told to take off the battery pack
when using the 202 on External power. Seems to build up less heat.

1st,
of course the amp will pop the breaker, it draws 6 amps, the supply is
rated at 2.5, not really a surprise. On Packet the transmissions are verry
short and the supply handles it, but either use a bigger supply or use the
battery you spoke of with a charger on it. (Even a small 2a trickle cosidering
the duty cycle you will probably run.)
2nd,
The wire does make a difference, and I wouldn't worry about the drop in
voltage. On the 202 all that does is lower the output power until the voltage
drops low enough to drop out the HT altogether. For wire I use polarized lamp
cord at 16 AWG. Good for 8-10 amps with no problem (again - duty % makes a
difference as well as length)
>Finally, I built a 2 meter ground-plane antenna from 12 guage wire

You have 1 radiator and 2 radials, I might add a third to bring it closer to
50ohms but it should work just great. Put it this way, it is a heck of a lot
better than a duck!

> camper.

Yes. 12V is 12V regardless of where it comes from. The same gauge wire is
OK as well, since the HT will only draw as much current as it needs. But
it is *vital* to place a fuse or circuit breaker of a size apropriate for
the capacity of the wire right at the battery, so the high short-circuit
current of the large battery won't cause a fire in case of a short.

> Any problem with that? Again does the guage of the wiring
> make a difference?

This will work fine as well. The amp may not output quite as much power
with 12.5 V instead of 13.8, but it won't damage anything. The reason the
power supply works on packet is because the breaker is a thermal type that
does not trip instantly. You are drawing 6A from the supply (actually
less, since the voltage will drop) in either case, but the breaker doesn't
have time to open on packet. Wire of 16 gauge (what probably came with the
amp) is OK for short runs at the 8A level. It is important to keep the
wiring short so the voltage at the amp stays as high as possible. If the
wire must be more than a few feet long, consider going to 14, 12 or 10
gauge, not as a safety concern, but for higher performance. Again, the
fuse should be located right at the battery so any possible shorts in the
wiring will cause it to blow. The best way to tell if your wiring is
adequate is to measure the voltage at the amplifier and at the battery
while transmitting. If this test shows more than 0.5V or so drop, larger
wire will probably get you more RF output.

>
>Finally, I built a 2 meter ground-plane antenna from 12 guage wire

>verticle radiator and two radials.

This will handle 30W just fine. I have used such antennas at the 100W level and they can probably handle much more. The thing to be careful of is to keep the antenna reasonably away (10' or more, but this is a trade-off with loss in the coax) from the rest of your hardware and 'wetware' when running high power. This is so the RF doesn't feed back in to low-level circuits and cause problems. Moving the antenna straight up is the best direction to take when moving it away.

>visor and visible through the rear view window!

I went out on patrol one night with a State Trooper friend of mine. When ever he clocked a car from behind, you could tell if they had a radar detector because the driver immediately braked. Best advise, don't brake if your radar detector suddenly goes off. If the cop doesn't think you have a radar detector, you may get off with a warning. If he knows you have a detector, you will get a ticket.

The radar detectors are also very easy to see from a patrol car. If your radar detector has a dark mode, use it.

>
> WA6FWI

I would "rest" more easily if I heard that from a Tandy official.
Besides, your logic only goes so far (and not very far at that.
For instance, what would stop RS from selling their list to someone
they do not compete with? A list of Radio Shack customers is also
a list of middle-class people with enough money to buy consumer
electronics (but not enough to buy really good stuff). Such a list
would be as useful to a low-end clothing catalog company as to Tandy.
I may be wrong, but I don't think Radio Shack competes in that market.
Direct-mail marketers rely upon complex analysis to target materials
to just the right market. They also rely upon zip codes (some zips
are for areas of very low income, some for high, some for middle).
Thins means that such marketing firms assemble data from many
sources and break it down according to various catagories. RS
information would be as useful for that purpose as anyone elses
list.

Regarging the "Catch a Mouse" book, I resent customers being
characterized as mice for some marketing guru (the cat) the play
with. The only "noise" I hear from RS is the sounds of money
being counted.

Since when does selling something mean you lose your copyright?
Books, magazines, newspapers, music (recorded or printed), and
computer software is sold to the tune of a billion dollars a
day and the copyrights to all that stuff is still retained their
owners. More than a millisecond's thought would remind one that
the whole purpose of copyright is so you *can* sell it and still
retain exclusive rights to sell it in the future.

Please don't let Radio Shack do your thinking for you.

: Hold it. The original stipulation was for "binary signal." You
: are describing something else.
: Tapping on a table would work with the original (American) Morse
: code. Not with what hams are currently beeping on the air.

One way to make it work is to use the spaces between the taps instead of the taps proper. For example, to tap out my sons' name, I'll tap H-A-N-S but instead of trying to make the dah long, he listens for the longer pause caused by "holding down the key for the dah" instead. So, it would be like:

tap tap tap tap tap tap tap tap tap tap tap

and decodes

. . . . . ____ _____ . . . .

Works pretty well for us, but we haven't tried anything but names yet! ;-)

Are you arguing semantics here, i.e. sold vs. leased? There are many ways to provide names and addresses in exchange for monetary consideration. Many of these companies do not provide their list, only the mailing labels for one mailing.

I do firmly believe that Tandy corporation tells it's employees that it does not sell the information. I also believe that the corp. is misleading it's employees.

I has been suggested by some RS employees that the customers just say no. Except that is not the correct response to the question "what is your name?" It would be more appropriate for employees to ask something like "would you like to be on our mailing list?" But ordinarily, one gets the impression that providing the information is a condition of sale. This is what I object to!

I have declined to provide this information in the past, but doing so is difficult without being confrontational. The employees do not take no for an answer without putting up a fight.

> DE KB0OXD

KB0OXD raises a good point here-especially as I am quite keen on this set myself. So far I have seen a few comments (certainly not reviews)and much hype in the various Newsgroups-most seem to say "Hey wow lookie here it's real small and it does all these great things and you've gotta buy one.....etc". But I have not seen any real facts on the IC706. Does it have a wide as a barn door front end? How does it perform when used close to powerful transmitters just outside the Ham bands, especially on VHF? What is the sensitivity like on 2 meters? How clean is the transmitter? Also, as it is a very new set might there not be some "teething troubles" with it? I think we should be told, otherwise a great number of these APPARENTLY super little sets will be bought on what amounts to hearsay and hype!
Anyone out there with one-let us know how well it performs please!

More than likely you converter (?) can not supply the current the HT needs when it transmits on high. When your batteries go low the same thing will happens, right?
Question?? Why do you need a CONVERTER? I used a power cord from an old radar detector and it worked until I bought my mobile radio 3 months later (ok, I did have to change the 1 amp fuse to a 2 amp, but that is all)

What! For that to be true, there would have to be more people doing upgrades at VE sessions than those taking Tech. That hasn't been my experience dropping by VE sessions at hamfests and the like and doing head counts. If you've got hard numbers, I'd like to see them.

>give his club a club talk ... well, that is another story.

But Ed, the League offers some services to non-members and members
alike. If someone complained about not receiving a service that
normally is reserved for members-only, not many people would have
a great deal of sympathy.

...

>If we do so, are we allowed to stop the other things we do? Would you
>really propose we terminate our Washington lobbyist? Should I do only
>those RFI things that are done directly for the RFI book? BTW, one of
>the first things to go would be the "voluntary" club talks. :-)

Why would you do away with things that are supported by the paying
members? Unless, of course, there isn't money to do what the League
wants to do, because they don't have the membership $$$ rolling in --
in that case, perhaps they should re-examine their role in
amateur radio.

>Are you proposing that we deflate the numbers to the minimum estimate,
>and use that to represent Amateur Radio? I don't see the things we do
>as self serving; I see them as serving Amateur Radio. (As hams, we do
>benefit from them, too, of course.)

Many organizations overinflate their numbers. Take the Catheloc(sp?)
Church. Its a well-known fact that the Vatican routinely "overinflates"
their numbers, based upon their "beliefs" what the true number of
members are.

Why do they do that? It must be self-serving in some way. The
League's overestimation of its membership based upon "memberships"
must be self-serving too.

>And, if we aren't the voice of Amateur Radio in the US, who is? If a
>better organization ever springs up, I am outa' here and will see if I
>can work there, instead.

Gee Ed, you almost sound like a capitalist. Doesn't it kinda go against
that '60's grain of yours? :-)

Scott Ehrlich (scotte@ccs.neu.edu) wrote:

: Some may disagree, but I prefer a dry cell (AA) case. If you are at some
: event, whether stationary or mobile, and your NiCads die, there is
: usually no way to charge them where you are. But, if your AA cells die,
: you can simply either take more out of a pocket or bag, or go to a store
: and buy some.

: Slightly more expensive over time, but so much more convenient. You
: never have to worry about how low your NiCAD batty is.

I operate similarly for RACES. The HTX-202 is (usually) fully charged
and in my crash kit I have enough AAs to twice fill the AA Case that came
with the unit. By that time, I'll either have located a secondary source
for more AAs or will have had some delivered. It's worked out pretty well
so far. Same reasoning: it's not always possible to re-charge.

838. Doorbell/Intercom Picking Up CW/SSB

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-16 00:00:00 UTC
From: n6ugj@tuna.hooked.net
Message-ID: <45urb7$si8@tuna.hooked.net>
Source record: 236833

My neighbor who lives in a 3-tenant-3 story apartment right next door --
Well, today he left a polite note about the fact that my radio signals have
been causing the doorbell to go off and I am also coming over his intercom
system (evidently he has intercoms in every room that are hearing my CW and
SSB signals as . (and supposedly also one other tenant's intecom) He
tolerated it for a few days until it woke the household up this morning
when I transmtted on 40 at 0615.

Anybody have ideas on the kind of advice I can give him?? I would even be
willing to help --somehow--but just not sure how I could be most effective.

I dont want to keep waking him up every morning when I want to do 40 CW,
but I am grounded (as best as I can with a 2nd Floor house) and I am
running a brand new TS 850S with a brand new Telex DX-77 radialless
antenna. Any help is greatly appreciated.

Yes, it is corrected for propagation delay. It has to be, or else the
location info would be incorrect.

> compared to the HT. The battery runs the 12 volt system in the
> camper.

Yes. The load (the radio) determines the size of the wire needed.
Since the '202 draws abt 1 amp on high power transmit, light guage wire
will be OK on either power source.

Physical size of the battery isn't the concern...voltage is. The
larger battery will last longer (a lot longer, most of the time.)

>
>2. Power my Radio Shack 30 watt power AMP? The AMP draws 6 amps
> of current continous and I think the in-line fuse is

It will work fine.

> Any problem with that? Again does the guage of the wiring
> make a difference?

Depends on the length of the run from the amp to the battery. The
longer the run, the larger guage of wire you need to reduce voltage
drop.

>
>Finally, I built a 2 meter ground-plane antenna from 12 guage wire
>and a RO-239(?) connector. It works well off my HT, but would like

>verticle radiator and two radials.

No, the output of the amp will not hurt the ground plane. Make sure
you have a good match (SWR) between the amp, or the protection circuit
of the amp will shut down the amp.

Curious...why didn't you add the other two radials?

From: djarrell@pixi.com
Message-ID: <45vb3p$fi@rigel.pixi.com>
Source record: 236691

Regarding your noise problem with the Bronco....I have the same problem with my 89 Bronco II. Drives me nuts. Ford was really helpful (sarcastic comment). I told them the noise varied when you rocked the car which would indicate the fuel sensor was the culprit. Ford said it was my radio and pulled it for repair. Six months later I got the radio back. They said it was a loose connection inside the radio. No change! Noise is still there and wipes out even strong signals on the AM broadcast band. Would like to hear from you if you have a simple solution. From what I can tell, pulling the sensor means pulling the gas tank.

Dave

Question: Any phone number beginning with 011-24 8 is in off the coast of East Africa in the Seychelle Islands. Where can you find a long distance company which will let you call from the U.S. to the Seychelle Islands for $1.50? More like $13 for 3 minutes.

If they are dishonest about that, do you think they are honest about paying commissions to posters or that pyramid scheme they use to sign new members up?

Pyramid schemes (so many people on one level, so many more people on the next ...) require more people than the population of the earth to go down more than a few levels.

Why? So as not to warn others?

>
>This really isn't a scam. You ask, "where does the money come from?"
>Simple answer: thank the phone company.

Yes, that's right. The phone company loses money on this deal. NOT!
The phone company makes money. So where does the money come from in this zero-sum game? It comes from schmucks at the bottom of this pyramid scheme who can't possibly get any more participants to contribute to their wealth because everyone else has already participated, or is too smart to fall into this trap.

Pyramid schemes are illegal in the U.S.

>Here's the math: If you get 100 people to call (very simple to do), then

How is $17,000 impressive if it's "so simple" to make $250,000?

How many people do *you* have to get to call to make that $250,000? Over ONE MILLION! How many of those million people are going to get another million people to call before the population is exhausted?

>

>and none of them have worked as fast and as easy as this one.

When you are the person at the top of the pyramid, it's easy to make money. It won't be as easy for others as it was for you, because all the schmucks have

already given their money to you, and they're not about to give it again to the next batch of con artists and losers. After a while, you have a billion schmucks screaming at each other, "Call my account number! Call my account number!" and everybody is trying to get money from everybody else.

> I foresee
>this System being the fastest growing business in the year 2000 so do not
>miss your chance, TAKE ACTION, your future depends on it.

Right. This is the solution to world poverty. The entire country is going to be sitting around on their yachts, calling each other's Interlink numbers, collecting their checks in the mail. Everyone, that is, except the phone company people who are supposedly losing their shirts on this deal, yet still manage to stay in business to keep this thing running.

When I used to go up to the mountains on the VHF QSO party, we all used
CB radios to stay in touch on the road as well.

The channels are spread from 226.965 Mhz to 27.405 MHz in 10 KHz steps
with a few exceptions.

I don't understand this response. Why wouldn't they want to isolate the source? Are you implying that the FCC doesn't realize the importance of an interference-free fire channel? Or are you implying that the FCC doesn't care? If so, then what are you basing your implications on?

: giving this information. True, your privacy is your right, but providing
: this info will help us & the customer in many ways:

: 1) Allows us to get familiar with the customer, know them on a first-name
: basis, etc.

That's patently ridiculous. How many of your customers do you
know by first name?

: 2) Provides the customer with proof of purchase in case their reciept is
: lost.

Why not do like Walmart and just accept the return anyway? Result
is that I'm far more likely to go to Walmart as a result.

: 3) Puts the customer on the list to recieve the flier, which will alert
: them of items on sale in which they may be interested

If I'm interested, I'll go to the store.

: 4) Allows us to pre-approve customers for credit.

On my purchases, Sure.

: Also, If you give the information, and return to the store, it will save
: you the trouble of having to go through the same thing over, and over. I
: do wish that the stores linked these databases, though...

: When people come into my RS store and are unwilling to provide name and
: address, it gives me the impression that they don't trust us....

That's the point. WE DON'T TRUST YOU.

: The benifit is mutual, and really, how hard is it to say your name & address?

If you want my name & address on the sale, I'll make a deal with you:
you give me the merchandise free and I'll give you my name & address
free.

: Nate Gingras.

There are other reasons not to put down a name, address, telephone
number, ... For example, if you pay by credit card, you defnitely
don't want extraneous information on the card slip. That means
NO ADDRESS, NO TELEPHONE NUMBER, NO LICENSE PLATE NUMBER, NO PLACE
OF EMPLOYMENT, NO DRIVERS LICENSE NUMBER. The credit card security
people say that if someone requires additional info, give them a

FAKE number, address, ... The stores are FORBIDDEN to even ask for the information by their contracts with the credit card people. If someone does ask, you know immediately that they do not live by their contracts and are not trustworthy enough to hold any such information. Personally, I try not to do further business with such people.

On a lighter note:

I bought a battery in a Radio Shack one day and when the salesman asked my name, I refused to give it. After a short argument, he just punched in another customer's name so that there would be a name on the slip (what a slimy way to do business). While I was walking out the store, I looked at it -- it was my oldest brother!

The NWS office here in LaCrosse WI is expanding greatly. This means that the local Amateur Radio Skywarn volunteers will be taking on a much greater responsibility as well as a much greater area of coverage. As opposed to the local area we used to have, we will now be covering a total of 28 counties in Southwest Wisconsin, Southeast Minnesota and Northeast Iowa. My question is for anyone who is also covering a vast amount of area. How do you do it? Do you use one frequency or several? We have new equipment and a large beam antenna which should get us most of the range we need, but it still will not reach everyone. Packet has been suggested as another possibility. Is anyone using Packet for Skywarn and if so, how well does that work for you? We also are looking for DOS software we can use to keep track of everybody that we have sent out into the field. The computer is only a 286, so the software will have to be small. Any help would be greatly appreciated!

This is the way the sales droids are programmed by RS Corporate. If they
don't get your name and address, they lose points on their nonsensical
performance statistics. Believe it or not, there actually is a field of
criteria named (percentage of) "NAMES AND ADDRESSES!"
>
>I actually had one salesman refuse to write up the sale without my
>name and address. I wasn't in the mood to argue so I told him what he
>could do with the *single pack of AA batteries*.

Make sure you tell the people in Fort Worth, too. They don't care if you
are offended, intimidated, or annoyed by their "name and address" policy..
but if enough people tell them that they are literally LOSING SALES
because of it, things might change. John Roach didn't get where he is by
turning away customers.

Source record: 236708

Triangulation to locate a CB or police transmitter is actually
much easier than when trying to locate a cellular phone, as
CB or police transmitters are generally more powerful and
communicate directly rather than through complex networks
of automatically switched relay sites. Many ham radio
operators do competitive transmitter hunting as a sport
and as training for location of unlawful transmitters or
persons in distress. Both mobile and hand-carried directional
antennas are commonly used, though antenna sizes are more
compact and a more directional antenna can easily be built for
police frequencies than for traditional Citizens' Band emissions.
This is due to the difference in the length of the radio wave,
which directly affects the size of an ideal antenna: a CB wave
is about thirty feet long, while police-band wave is more
like six feet long.

Well both CW and SSB are forms of AM and as a result, something in the
intercom system (and probably doorbell electronics) is rectifying your
signal which makes it essentially an AM detector.

> Anybody have ideas on the kind of advice I can give him?? I would even be
> willing to help --somehow--but just not sure how I could be most effective.

If you wish to undertake the task yourself, you'll probably be best off with some
capacitors and torroids. You need to first determine where the RF is getting
into the gear. Most likely it is from wires going to/from the equipment. Disconnect
all external wires from the intercom and see if it still picks up your signal. If
so, then it is probably getting in through the power (don't disconnect that in the
above directions to disconnect external wires ;-) Wrap the power cord around a
torroid (available from Radio Shack) 7-10 times and try again. If the problem still
exists, then you may want to get professional (or at least experienced) help. If
the problem goes away, try connecting the external wires and see if the problem
returns. If it returns or if it went away when you disconnected the wires in the
first place, try the same trick wrapping the external wires around a torroid.
If that fails, you could try a .001 uF bypass capacitor across the wires (assuming
they are audio level signals.) If both those fail, you'll need to do more
research on RFI suppression techniques. The ARRL has a book on the topic that
is very good.

For the doorbell, the problem is almost certainly RF getting in via the wire from
the button to the doorbell mechanism (unless the doorbell is some sophisticated
electronic device and then treat it as you did the intercom) or on the power
lines coming from the low voltage transformer that normally is used in a doorbell
system. Again, the same techniques should work, i.e., try a torroid and then
bypass cap.

It is highly unlikely that the problem is with your equipment or setup, although good grounding is always good practice. A tuned counterpoise might help, but probably not.

Jeffrey Herman (jherman@Hawaii.Edu) wrote:
: Jim Lowman <jlowman@netcom.com> wrote:
: >
: >As others have pointed out, the dated sales receipt is proof of purchase,
: >with or without a name.

: Unless the item has been sold to someone else. Then that should
: void the warrantee. Electronics folks are swappers and sellers of
: their gear - RS should not have to honor a warranted item if it's
: not in the hands of the original owner.

But other sellers of warranteed electronic gear do not ask for names. How
do they know that it is the original buyer, when a store receipt is
presented in conjunction with a return or repair? Do they care?

Regardless of RSs or anyone elses disclaimer, if the item is still within the
warranty period, I do not consider it unethical for a subsequent owner to
get the same warranty as the original buyer . What difference
should it make, anyway? They would have to repair or replace the item for
the original buyer.

: If RS thought asking for a buyer's name was bad for business, then
: they would drop the concept in an instant. The folks complaining on
: here are a tiny tiny fraction of their repeat customership, yet these
: folks continue to shop there - no one has stopped their buying of
: RS items.

They probably are not fully aware of the problem. Top management makes this
sort of decision, but they do not solicit feedback from their front-line
sales force. I think if they were aware of the battles between salesperson
and customer over this issue, and the ensuing goodwill/business lost, they
would rethink their policy.

The "folks complaining here" probably represent a valid cross-section of
RS buyers. If this many people are upset in this limited forum, it is
probable that RS customers in general do not like the policy.
It is just that not enough of us have the time to write letters to the
corporate idiots. Instead we take it out on the underpaid salesperson in
the local store, which does no one any good, as upper management could care
less about this feedback.

: It amazes me how folks worry about such non-problems so as to raise
: their bloodpressure. Here's something that's *really* worth worrying
: about: 35,000 children die daily worldwide from starvation. (United
: Nations' statistic.)

You are trivializing a valid complaint. Thinking consumers should be very concerned, if not worried, about where any information collected about them might wind up.

Unfortunately, the average person probably has higher priorities in his own life than the starving children of the world.

Source record: 236717

stever@raven.cybercom.com wanted to know who the moderator
of this newsgroup because he wants to get the post
The Worlds Most Profitable Phone Number-National Audiotext
purged.

There's no moderator in this newsgroup, just as there's no
moderator in most of the internet newsgroups.

If the message that you want purged was sent by you, send a
cancel message. Don't ask me how to do it.

If it's because you didn't like to see the message here,
and it looks like it is out of place by because it's an ad
and because it doesn't look like it has any connection
to amateur radio, then sent email to the postmaster
at the address from where the message was sent
(ie postmaster@somewhere.domain), telling him or her why
the message didn't belong here. Be sure to include the
complete message, including as much of the header information
that you get.

I've done this a few times, and the response varies, depending
on the originating site. I think educational sites are most concerned,
but then also their traffic level is low enough that they are not
mechanized, so you are likely to get a non-automatic response.
I got a form letter back from one of the big services, and in
other cases I've never even heard anything back.

Of course, the problem with this process is that it closes the
door after the cows have escaped. The message is already out,
bothering people and giving bad ideas to others who would emulate
it. On the other hand, to do nothing would probably increase
the number of out of place messages.

SB QST @ ARL $ARLB096
ARLB096 FCC OKs closings plan

ZCZC AG63
QST de W1AW
ARRL Bulletin 96 ARLB096
From ARRL Headquarters
Newington CT October 17, 1995
To all radio amateurs

SB QST ARL ARLB096
ARLB096 FCC OKs closings plan

The FCC has approved a field office restructuring plan that it says will improve operations and save money. The plan, submitted to the Commissioners by FCC Chairman Reed Hundt on August 17, would automate the FCC's network of airwave monitoring stations and reduce the number of field offices and field personnel in the Compliance and Information Bureau (CIB).

The plan also will improve public information services by establishing a new toll-free national call center, the FCC said. The Commission's field enforcement activities would be maintained at current levels.

The plan would close nine separate attended high frequency monitoring stations, and three additional monitoring sites within FCC field offices. Technological advances permit the replacement of these monitoring stations with a national automated monitoring network by the summer of 1996, the FCC said, and ''overall, monitoring capacities will be enhanced.'' One facility in Laurel/Columbia, Maryland, will remain as the network central station.

The new FCC Call Center would, for the first time, enable the public anywhere in the United States to call one toll-free number to reach the FCC for information or to report complaints. The Center will handle this function more efficiently, and with greater convenience to the public, than is now possible in the dispersed field offices, the FCC said.

The FCC said that, under the plan, authorized staffing in the CIB will decrease by about one-third by the beginning of FY 1997. The CIB plan will require an investment of 5 to 7 million dollars in equipment and personnel in fiscal years 1996 and 1997 and the

Commission estimates it would save more than 8 million (in current dollars) annually thereafter.

Hundt said, ''The CIB restructuring plan will enable us to enforce the rules that govern the nation's airwaves better and cheaper. We will also be able to provide information services to the public better and cheaper.''

As is required for all major FCC reorganizations, the CIB restructuring plan must be reviewed by the House and Senate Appropriations Committees. At the same time, the FCC will begin required negotiations with the union that represents FCC employees.

More information is in November 1995 QST, page 92.

Hi Charlie:

On Tue, 17 Oct 1995, Charles A. Rubenstein wrote:

> dont consider this a rig to buy in place of a 2M rig, if FM repeater
> usage is your main concern. But on 2M SSB/CW it is fine.

Since I don't have my HF yet, I would be using it for 6 meter and 2 meter work (Both SSB and FM {maybe 6 AM as well}, repeaters as well as simplex).

I do understand that setting repeater offsets is cumbersome, though. Gee, Hmm....

> Im into QRP, and it has the ability without mod to go down to abt 1W,
> although efficiency isnt the greatest.

I'm into QRP too! Especially since I live in an apartment and all. Gee, Hmmm...

> All in all, Im VERY happy with it, and at the price I paid , abt 1250.00
> + 60 for the filter (used), it delivers all I need.

A bit pricey too! :((Grrr..) Gee, Hmm....

But all in all, is it *really* worth losing 440 Mhz. (which isn't very active around here) just to get this rig??

> Hope this helped somewhat.--

Charlie, if it means losing a band that isn't very active around here (440 Mhz.) in exchange for a mode that a fair amount of activity (not to mention more contacts) in 2m SSB, then I guess it probably would be.

But I dunno! I'll have to think about this one. I do like the idea of a pre-amp though. Also, is it CTCSS tone capable??? (We have a local 6 meter repeater on PL Tone that I like, but it's PL'ed and I don't have a PL Tone board for the 690 yet).

73's for now, my friends!

>: RS items.

Why do you think that most of us buy our major electronic stuff at
other non-RS stores. Think how the sales at RS would increase if they
just made it easy to do business with them and they improved the sorry
state of their quality.

>They probably are not fully aware of the problem. Top management

I just want a battery, not a relationship.

>The benifit is mutual, and really, how hard is it to say your name & address?

Just to show you why that might be a bad idea, suppose someone -- let's call him Orenthal J. Stalker, goes into the Radio Shack and gives the last name or last four digits of someone he'd really like to see again. He doesn't know if Miss Right shops there, but there's a good chance she's been there in the last year or so and, what the heck, he has nothing to lose. Then, when the salesdroid calls up the screen, Mr. Stalker says "let me see that just to make sure you've got the address right". And he looks at the address on the screen, giving him exactly what he wants to know.

Moral: give out personal and private information at your own risk.

Note followups.

>not in the hands of the original owner.

Why not? It may be that the warranty offered by Radio Shack is
only extended to the original purchaser, but that isn't necessarily
the "right" way. I assert that a warranty is a warranty, regardless
of who posseses the device when service is required.

>If RS thought asking for a buyer's name was bad for business, then
>they would drop the concept in an instant. The folks complaining on
>here are a tiny tiny fraction of their repeat customership, yet these
>folks continue to shop there - no one has stopped their buying of
>RS items.

I certainly shop at Radio Shack less often than I would otherwise,
and I certainly make fewer big ticket purchases there.

>It amazes me how folks worry about such non-problems so as to raise
>their bloodpressure. Here's something that's *really* worth worrying
>about: 35,000 children die daily worldwide from starvation. (United
>Nations' statistic.)

The issue of giving out my address and/or telephone number may
be a non-issue to *you*, but it is not a non-issue to *me*. The
only reason my home address is in the FCC database is that the FCC
used to require that information (it doesn't any longer). It is
this simple; my address is simply not required for a cash purchase,
and I'd rather not increase the chance that someone may decide
that my house is a nice place to burgle.

If you like to give your address out, that's fine. But I urge you
to avoid the all-to-common mistake people make of assuming their
own preferences are those of all other people.

880. Advice on 2M mobile rig wanted

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-17 00:00:00 UTC
From: david_b3@sfov1.verifone.com
Message-ID: <1995Oct17.174343.4464@sfov1.verifone.com>
Source record: 236727

I'm in the market for a basic 2M mobile rig. Can spend about $350.
I've heard good things about the Yaesu 2500. Reliability is key. I have
an Alinco DJ-580T handy talkie that is flaking out on me after 3 years,
though I've babied it. I'm not that keen on Alinco as a result.

Also, my Explorer has a glass mount cellular antenna and coax leading to a
trunk-mount unit. I don't use it and was thinking of using it for 2M. Is
there anything I can leave from the cellular antenna mount, or must I
remove the mount, etc.

Also, are there any things I need to know about a 1994 Explorer and a
mobile rig, any problems anybody's had, etc.? Advice is greatly
appreciated.

Source record: 236728

Subject: Re: 2m Handheld Transceiver

JA>What's a good 2m transceiver to get?

Best buy? Something from your local Amateure Radio Club.

New stuff? The Radio Shack HTX-202 at under 200 bucks is a solid performer.

The HTX-202 has 12 independently-programmable memory channels, plus one calling and three priority channels. It comes with continuous tone squelch encode -AND- decode. Power output is 5 watts minimum (7w typical) with 12 VDC supply, 3 watts @ 9 VDC or 2 watts @ 7.5 VDC. Low power setting provides 1 watt output. A power saver circuit with programmable 1/2, 1/4, 1/8, or 1/16-second duty cycle. Batteries are compatible with larger ICOM (IC-2AT/IC-32AT) series HTs.

Repeater offset can be adjusted from 0 to 4 MHz in steps as set by the scan frequency step selection (5, 10, 20, 25, 50 or 100 KHz). Memories store any offset, and any combination of continuous tone frequencies.

Supplied with Nicad battery, charger, 6-cell alkaline battery case, antenna, wrist strap and belt clip. Features include:

* True FM modulation (not phase modulation) for outstanding transmit audio and best performance in packet service.
* Continuous tone squelch transmit and receive tones are independently programmable.
* In addition to DTMF dialing, there is 5-digit DTMF selective paging (DTMF squelch).
* A five-number memory dialer that stores 15-digit sequences for autopatch use or DTMF paging.
* Scan for either active -- or vacant -- channels, with programmable scanning step of 5, 10, 20, 25, 50 or 100 KHz, and upper and lower scan limits (for VFO scan.)
* FAST, 25 channels/second scanning.
* Selectable priority channel scan interval, every 4, 8, 12 or 16 seconds.
* Multi-function scanning lets you scan standard memories, priority freq. memories, or a frequency range. Resume can be after 10 seconds, when carrier drops, or remain on channel (don't resume.)
* Transmit timeout - if you frequently time-out your local repeater, this circuit will stop transmitting after a preset delay (30, 60 or 120 sec.) and sound a beep. In effect, it forces you to reset the repeater before the repeater times out.

Of course you can disable the timeout circuit.
* The HTX-202 carries a 1-year parts and labor warranty.

Source record: 236729

GM>works fine on the battery poweer until I hit the PTT button. The display
>goes out and the radio does not transmit!.. I then have to turn the unit

Does your HT give you the ER2 message?

ER2 indicates a PLL unlock. The radio gives this error if the PLL alignment
is off or if the transmitted signal interferes with the internal PLL
frequency. This error has been reported most frequently when using the
supplied "rubber ducky" antenna with either a high-power battery pack or
with an external DC source.

According to the memo, the fix for this is to use an external antenna when
using external DC power. The memo goes on to say that if the problem
persists, send the transciever to the repair center.

Try an external antenna - see if that clears it up.

EH>involved with our "publishing business." Some of the rest spend some
EH>portion of their time supporting their efforts. Most of HQ is involved
EH>in either delivering Membership services, or the inevitable mailroom,
EH>receptionist, etc.

Ed,
I thought the news about the conference on VHF spelled out how
useful the ARRL is and why it deserves support. The group met
to try to hammer out a plan to end the problems of 'pirate'
repeaters stepping all over each others frequencies in some
parts of the country. The recommendation was everyone work
together with the ARRL as their spokesman to the FCC. That's
the kind of thing the ARRL does very well, and there is no
one else around to do it. If hams don't want to join that's
fine, but don't bad mouth the organization for collecting
reasonable dues. (Boy will I get flamed). Mike

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 OCTOBER AND FORECAST FOR 18 OCTOBER - 20 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 85/27

GOES satellite data for 16 Oct
Daily Proton Fluence >1 MeV: 1.0E+06
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.1E+08 (moderate)
X-ray background: A4.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Oct 19 Oct 20 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Oct: 84/26

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 16 Oct
Learmonth 8 2321 3311
Fredericksburg 11 5
Planetary 15 6

Observed Kp for 16 Oct: 1212 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 Oct 20 Quiet to unsettled
19 Oct 20 Unsettled to active
20 Oct 20 Unsettled to active

COMMENT: Active periods are possible on 19-20 Oct due to a new
coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
17 Oct normal normal normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Oct normal normal normal
19 Oct normal normal normal-fair
20 Oct normal normal-fair fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE Observed T index
17 Oct 8

Observed Australian Regional MUFs:
Darwin MUFs were 15-30% depressed to near predicted monthly values.
Townsville MUFs were near predicted monthly values.
Sydney MUFs were near predicted monthly values, with regular spread F
observed during local night.
Hobart MUFs were slightly depressed to near predicted monthly values.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
18 Oct 5 Near predicted monthly values
19 Oct 5 Near predicted monthly values
20 Oct 0 Slightly below to near predicted monthly values.

>grabbed about ten brochures from the display, and went home to compare
>technical specs. He was right. The RF and audio specs were almost the
>same for all of them.

I'd offer two cautions. First, not all the important parameters are included in the spec sheets. For example, susceptability to intermod can rarely be determined from the advertising literature. And second, this *is* advertising literature, and independent confirmation should be sought. The QST reviews are a good cross check on the manufacturers' claims. For example, several manufacturers sell radios that claim to be "data ready" for 9600 baud, but QST tests show that only one is actually suitable for 9600 baud, the Azden PCS9600D. So caveat emptor when comparing manufacturers' promotional advertising brochures.

In addition, you should consider the manufacturer's reputation for reliability and service when making a purchase decision. If you follow these groups, you'll note that one major Japanese brand has gained a less than sterling reputation in this regard in recent years.

There really *are* substantial functional differences between the various radios being offered, even if their advertising literature makes them all seem like God's gift to radio. Fortunately, none of them are truly horrible, but some are much better than others in one or more regards.

Gary

BB>for more AAs or will have had some delivered. It's worked out pretty well
BB>so far. Same reasoning: it's not always possible to re-charge.

BB>73 de Bill, KC7JSD

here's something many of you may not have thought of... just about any
event i can think of that i've ever worked, i've had a vehicle or my
vehicle nearby (within walking distance). purchase one of those small
DC to AC inverters that plug into the cigarette lighter. they draw very
little from the car battery and provide enough power for just about
ANY of the rapid chargers for batteries i can think of. i use mine
extensively to recharge my batteries for my icom H-16 and my yaesu 815
when i'm on the road or camping. unless i'm taken away from my vehicle
or anyone else's vehicle (which has never happened for any event i've
worked so far), i always have at least one fresh battery ready to go.

the units aren't expensive (small 50 watt inverters sell for as little
as $30 from mail order outfits) and are small and compact (smaller than
most ht batteries). well worth the $30. they work great for powering
laptop computers too... wonderful for mobile packet applications!

887. Ham holiday blood drives

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-17 00:00:00 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <461f0k$n47$1@mhafc.production.compuserve.com>
Source record: 236734

RADIO HAMS HAVE PUBLIC SERVICE IN THEIR BLOOD

With Los Angeles area blood banks dreading their annual holiday shortage, hundreds of local hams will take part in a special blood drive next month at Torrance Memorial Medical Center (TMMC).

``Torrance Memorial is one of our principal supporters,'' said Chuck Lobb, volunteer director of the Torrance Amateur Radio Association (TARA) which organizes South Bay hams to aid public safety agencies. ``In recent years, the Medical Center has opened its meeting rooms to ham groups, provided space for ham equipment to aid emergency communications, and taken a leading role in disaster drills.'' The hospital also has its own team of ham radio volunteers, led by Assistant Administrator John Mazzarino (whose amateur radio call sign is KD6MQC).

To show their appreciation to TMMC, TARA will join with the South Bay Amateur Radio Club and the Hughes Amateur Radio Club in urging the South Bay's 3,200 radio hams to make blood donations during the week of November 13-18. A prominent radio manufacturer, Torrance-based Alinco Electronics, has donated two ham radio VHF transceivers as grand prizes for a November 18 raffle drawing: donating hams will receive one chance for each pint of blood donated by that ham or a family member.

==========

Above excerpted from a longer release with additional details of local interest only. Perhaps a good idea for other clubs in other parts of the country!

>antenna. Any help is greatly appreciated.

You're almost certainly treating them to severe fundamental overload.
The most promising thing you can do to *your* station is to move the
antenna further away from them, and/or use a balanced horizontal antenna
like a dipole (also further away) instead of a vertical, which will move
the radiation center away from the station and free you from grounding
constraints (balanced antennas don't need ground to work). And of course
running less power is also helpful.

To really get at the problem, you've got to improve the immunity to
fundamental overload of the doorbell and intercom. The usual tricks
should work, ferrite cores on leads, bypass capacitors, etc. No doubt
you're bothering TV sets and VCRs too, and maybe getting into their
telephones as well.

Susceptability to overload is really *their* problem (if they want to
give you grief, remind them that doorbells and intercoms aren't supposed
to be radio receivers, and if they are, they're broken), but to maintain
good relations you might want to offer to help them. Be careful, however,
because you could easily be forced to assume liability if anything goes
wrong with their equipment after you modify it. Better to let them do it,
or hire a service tech to do it, unless you can get a written waiver from
them.

You might want to make a present to them of the FCC RFI booklet. Or
if you are feeling generous you can buy them copies of the ARRL RFI
book, or loan them yours (you do have a copy don't you?). These overload
problems are fixable, but it may take some trial and error to find the
exact suppression techniques that will work in each case.

If you aren't experienced in dealing with RFI, sounds like you aren't, then ask at your radio club if they have a RFI committee, or ask the ARRL to point you to the TA for your area. They can help you deal with these problems.

However, under Scots law there are 3 verdicts: Not Guilty, Guilty and
Not Proven. The latter has come to mean Guilty but the court cannot
prove it, and so the defendant is let off but still under suspicion.
There are moves afoot to bring Scotland into line with the rest of the
UK and scrap it.

Cross-posted to: rec.pets,rec.puzzles,rec.radio.amateur.misc,rec.radio.shortwave,rec.scuba,rec.sport.baseball,rec.sport.basketball.college,rec.sport.basketball.pro,rec.sport.cricket

OK, so maybe this information is a little off topic, but I was so amazed when I tried this, I figured I had to share it with anyone who was interested in making "easy money." If you're convinced already that this is indeed a scam, please move on.

This really isn't a scam. You ask, "where does the money come from?" Simple answer: thank the phone company.

I was at first somewhat reluctant to give this system a try, let alone a second thought before I flamed the moron who posted it and mailed the postmaster, thinking it was yet another scam. But, I simply decided to give it shot, ignoring the $1.50 it was going to cost me to make a call that would in the end make me a LOT of money. I was absolutely stunned when I received my first check from Interlink for $17,000 (before taxes) in September (Interlink pays in 1000 dollar increments).

A recording gives you instructions on what to to. When asked to enter the account number of the person who gave you this number, enter 607286 -- that's my account number, and it's how I was able to pay off all my debts and move into a much nicer New York apartment!!!

Let met explain. The recording will give you your own account number, then it'll record your name and address (where your checks will be sent). Here's where it gets IMPRESSIVE!

For every call made to this number, InterLink receives $1.50. 50 cents goes to the account number you type in (in the case of your call, to me). Of course, now that you've got YOUR OWN account number, you'll want to have people call and type in YOUR account number -- get out there and publicise this incredible system with YOUR account number, and start making money! Try advertising on the UseNet, in newspapers, magazines, or business cards. Remember the lines are open 24 hours a day so you could be making money as you sleep.

It gets better. You get 50 cents for everyone who calls and types in your account number, but when they get people to type in THEIR account number you get 25 cents of that as well, PLUS 25 cents off everyone THEY get to call.

Here's the math: If you get 100 people to call (very simple to do), then you get $50 dollars. If they each get 100 people to call, then you get $2,500. If THEY each get 100 people to call then you get $250,000.
(100 *.50) + ((100 * 100) * .25) + ((100 * 100 * 100) + .25) = $250,628.12
But even the $17,000 I made last month is impressive!

People this is a note of advice to all those who have tried different systems of money-making techniques. I have tried them all (Dave DelDotto, Chain Letters, AMWAY, Don Lapre, Anthony Robbins, Carleton Sheets, etc.) and none of them have worked as fast and as easy as this one. I foresee this System being the fastest growing business in the year 2000 so do not miss your chance, TAKE ACTION, your future depends on it.

Good luck, and feel free to mail me with your experiences...

Gary, I'm afraid you must be willing to help. Referencing FCC 97.305 and 97.121 pretty much sums up the FCC's stance on spurious emissions. The amateur must keep his station clean and work with other partys to resolve problems. The copy of the rules I have (revised as of 10/1/93) doesn't specifically mention doorbells and intercoms but I'd be willing to wager that if your neighbor screams long and loud the burdon of solving the problem will somehow fall on you.

>I dont want to keep waking him up every morning when I want to do 40 CW,
>but I am grounded (as best as I can with a 2nd Floor house) and I am

Because every situation is different, any attempted long distance solution would be nothing more than speculation. I would run a test with your neighbor and see if the problem is band specific and/or frequency specific. It could be as simple as a higher VSWR on the ends of a certain band.

I seem to remember where the ARRL had a program whereby a person who agreed to become a technical assistant/consultant or something received a library of technical material on such problems. Help me out ARRL. Am I remembering this correctly? Anyhow, these people had their names and calls published so that new hams could solicit technical advice from experienced hams in their area. Another resource could be your local club or repeater association.

Source record: 236641

If the cellphone switches frequency according ot the base station to which it is working then you'd have problems - your triangulation equipment would also have to switch frequency. I suspect you'd have to be relativbely close to the cellphone (say, within a few miles) to have much success.
Now, if several cellphones share the same frequency (some sort of multiplax method - I'm not sure of this) then you'd have to actually listen to the conversation to establish the cellphone that you are receiving.

Most of the above is an estimate based on what I've read about the cellphone system here in the UK.

Ian.

From: jataylor@ll.mit.edu
Message-ID: <jataylor.175.000F1BAF@ll.mit.edu>
Source record: 236643

The Kwajalein Amateur Radio Club will sponsor Jamboree on the Air (JOTA) operation under the call V7BSA. Although our exact schedule is not yet clear, I imagine that we'll be on from around 0100 Sunday (Oct 22) UTC to about 1130 Sunday UTC. The local time in Kwajalein is UTC +12hr. It appears that Cubs and Girl Scouts will be in the shack during the first part of the operating time and the Boy Scouts will be on last.

In past years these scouts have enjoyed having contacts around the Pacific basin as well as into eastern North America. Almost all of of our scouts are native speakers of (american) english. Our equipment includes a 7-element Yagi, a 100 W transceiver and an amplifier.

We will be operating without schedules near the announced HF SSB frequencies and would look forward to talking with other scouts or hams who have an interest in kids. I expect that 20 mtrs will be our most-used band, although 15 mtrs will also be tested.

Kwajalein is a small island at the southern tip of the world's largest lagoon, located in the western chain of the Marshall Islands. The Marshalls are located in Micronesia, 2000-2500 miles (3300-4000 km) sw of Honolulu and just north of the equator.

(I also posted this message in rec.radio.amateur.equipment)

The Blue Ridge Mountain Rescue Group, located in
Charlottesville, VA, is a volunteer rescue organization that
responds to search and rescue emergencies throughout Virginia,
Maryland, WestVirginia, Pennsylvania, and North Carolina. We
currenlty use HH ICOM H-16 VHF radios that use NiCad batteries
(CM7s and CM8s). Because these batteries undergo heavy use,
after a few years many register no voltage and cannot be
recharged. I imagine in many cases this may just be the result
of a blown fuse or two and not simply the result of memory.

Because the batteries are expensive, we would like to
repair any that we can. The only problem... I don't know how
to do it! Is there anyone out there that could either direct
me to someone who can help us in fixing these batteries or
donate their own time and expertise?

Thanks,

Lauren Schiff
KB8WLD
Communications Officer, Blue Ridge Mtn. Rescue Group

P.S. Due to the size of this newsgroup, it would be great if
responses are directed to my e-mail address:

I am pretty sure solving the "general" gps problem involves
resolving the current positions of several sattelites relative to
you, hence the distance, and applying a standard correction for
propogation delays. But you wouldn't get current deltas from the
model assumptions. Are those enough to care about?

Source record: 236743

What a question?!

OJ is a ham already (K1LL, former N0TME with General class license) and, having left the good old US of A for good, he has been said to have operated as a ham from abroad under the following callsigns:

From Sweden: SL1ICE
From Mongolia: JU1ICE
From Market Reef: OJ0NO
From Gurnsey: GU/D4ME
From Germany: DA4U/N0TME

Reports of OJ having taken part as a blue helmet soldier in Bosnia and signing as 4U/K1LL have been reported as a pirate operation. The same goes for a conspirative meeting with Romeo, rightfully so, because Romeo always claimed he actually WAS in the place in question.

906. Re: Drop code? no way!

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-18 00:00:00 UTC
From: jrosenw@pgh.nauticom.net
Message-ID: <DGMKBo.Dnr@pgh.nauticom.net>
Source record: 236744

My ve team has been testing for eight years now. Since there is some discussion here about who is passing what tests, and who is upgrading, I thought the group would like to know our experince. Our group tests in the northern suburbs of Pittsburgh, PA. There are plenty of other teams in the area.

I make no claims about these results outside of the *fact* that they are my team's experience. I'll leave the analysis up to the group to draw whatever conclusions they want.

To date, we have tested 406 candidates.
These exams were given in the period 01/01/88 to 10/17/95
The following represents the results of those exams.
(Numbers in paranthesis represent that part of the results which are prior to 2/14/91 which implemented the technician class test which did not require a morse code element where that information is important)

New License:
Novice 19
Technician 64
Technician + 21 (5)
General 1
Advanced 0
Extra 2
Upgrades:
Nov-Tech+ 71 (58)
Nov-General 8
Nov-Advanced 1
Nov-Extra 1
Tech-Tech+ 5
Tech-General 2
Tech-Advanced 1
Tech-Extra 0
Tech+-General 19 (13)
Tech+-Advanced 8
Tech+-Extra 1
Gen-Advanced 34
Gen-Extra 6
Adv-Extra 14
Credit Only:
Written 40 (not broken out by element)
Morse Code 6 (not broken out by element)
Nothing: 82

New licenses and upgrades may also include additional credits
which the candidate earned, but were not immediately useable
for an upgrade, (ie, a general who passes the advanced and
extra theory, but fails the 20wpm, only appears here as an
upgrade to advanced). Additionally, not all candidates passed
all of the required elements at our session for the new license
or upgrade, some may have presented CSCE's for some elements
from other test sessions (including our team's).

Candidates in the nothing column walked out of the session
with no higher license (if any to begin with), and no
additional credits than they had when they came in.

I hope you can draw some interesting conclusions.
I would encourage other VE liasons to publish similar information.

Cheers,
John

Well, the problem is that there aren't a lot of alternate solutions.

: He shouldn't buy Ramsey kits so what SHOULD he buy ?

Personally, I think he should buy a few texts on electronics and
basic RF design, and start studying. :-)

Seriously, I've seen a number of books in the local newsstand
that have gazillions of HF/VHF/UHF receiver projects in them. It's
a good bet that there is at least one 137mhz reciever in there.

Nathan Ryan Gingras (herb@alpha1.csd.uwm.edu) wrote:
: i work at radio shack, And it annoys me when people get defensive about
: giving this information. True, your privacy is your right, but providing
: this info will help us & the customer in many ways:

: 1) Allows us to get familiar with the customer, know them on a first-name
: basis, etc.

Perhaps I'm old-fashioned, but I don't particularly appreciate people
trying to be my "buddy" when I've just met them.

: 2) Provides the customer with proof of purchase in case their reciept is
: lost.

Oh, you mean like the time I had to return an so-239 that had no
threads, and I had no receipt? At which point I had to spend 10 minutes
with the sales-droid convincing him to let me exchange it for one? When
I asked him to look up my purchase (I had purchased the part the
previous day) he informed me that "we can't do that."

: 3) Puts the customer on the list to recieve the flier, which will alert
: them of items on sale in which they may be interested

Yes, the same flier that gets stuffed into every local Sunday
newspaper, for free.

: 4) Allows us to pre-approve customers for credit.

Thanks, but 21.3% interest is not exactly a bargain.

: Also, If you give the information, and return to the store, it will save
: you the trouble of having to go through the same thing over, and over. I
: do wish that the stores linked these databases, though...

Think about it - you're trying to convince us that our right to
privacy is less important than the whims of your marketing department.
Don't you find that even a little disconcerting?

: When people come into my RS store and are unwilling to provide name and
: address, it gives me the impression that they don't trust us....
: The benifit is mutual, and really, how hard is it to say your name & address?

No, the "benefit" is completely one-sided, in Radio Shack's favor.
If you can't see that, I've got a nice piece of property in the
Everglades that I'd like to sell you, if you'll only take a moment to
give me your name and address.

Pyramid scheme and self serving "arguable statements" deleted.

After only 5 generations of the scheme at 100 victims per time you would only need:
100 x 100 x 100 x 100 x 100 = 10,000,000,000 people! No wonder the perpetrator wishes the prospective victim "Good luck".

>Good luck, and feel free to mail me with your experiences...

The Spanish word for "black" is "negro"

Therefore the word in the beginning never did mean anything derogatory,
it was a mere description of color in the spanish native tongue.

>I'd like to read your book, when it is published.

I agree with Bret's comments. I worked for a number of years as an
Air Traffic Controller and we used Direction Finding equipment to
assist pilots in finding their way back to the airport. Using
triangulation (two or more DF sites) we are able to plot the position
of an aircraft on a map. For this, we rely on radio transmission from
the aircraft on VHF or UHF frequencies.

In a similar manner, aircraft use direction finding equipment to home
in on radio beacons.

Good luck with your book - that must be a very demanding task and make
sure you post a note when your book is available. I am sure that it

will raise a lot of interest in the ham radio forums.

>when I go to hamfests 85% of all ht's are HTX 202's? Lack of quality!?

First, 85%? Come on and get real. Lack of quality, for sure. Just read the posts to this and other HR newsgroups that talk about hams returning their radios two, three and four times because they crpa out.

>HTX 202's have virtually no intermod, if none at all. Can't say that
>about many other HT's, can you? And they're reasonably priced. They

Yes, they have no intermod when they work. They are reasonably priced until you add the cost of the warranty. And you have to buy the warranty since the quality is so poor. However, when you add the cost of the warranty then the radio is not a cheap and it is better to buy a name brand unit with much better quality and smaller size.

>have a 3 year UNLIMITED warranty available, and if you don't want your name on
>the reciept, then TELL THEM, and quit whining. This is a silly complaint,

It is not a silly complaint. Your attitude is exactly why most of us shop elsewhere. RS does not listen to the customer...duh!

>I agree with those who said there are thousands of things you could worry
>about that are actually IMPORTANT.

Yes, we also worry about the quality of the RS stuff and they ignore that also.

>If you don't like giving your name, complain to the District managment,

Why? They don't listen to the customers either. I can remember calling the DM whn I made my last and final major purchase from RS and had a problem. He never returned my phone calls. Consequently, I don't buy anything but little parts there anymore. It took a call to the president of RS before the problem was resolved. There are better places to deal with and plenty of places that are easier to do business with than the rat shack.

>and reserve these groups for people who have actual radio related things to talk about.

This is about radios
>
>
>PS: Only about 5% of RS customers have a problem with giving their
name
>and address.

More have a problem, only 5 to 10% make you aware of it.

Notes of Interest:
The QSL route for the VP5C operation during the CQ/DJ
WW RTTY contest given in RTDX0915 was in error. It
should be QSL to PA3ERC.

Laci, HA0WW reports that all cards for XU95HA have been
printed, and all direct answers have been mailed. Do not
dupe unless you do not receive a card in about two weeks.
Address for HA0WW is P.O. Box 24, Puspokladany H-4151,
Hungary.

Lichtenstein, HB0 - Rolf, DL7VEE and Hans, DL7UHR will
operate CW, SSB and RTTY, on all bands until 9 October.

Madagascar (Malagasy), 5R - Shun, JF1MGI is now in Madagascar,
5R8EU. QSL to his home CBA. 5R8DS (PA3BXC) will
be returning to the Netherlands at the end of October.

The VK2SG RTTY DX NOTES are also available on Internet at
relectors dx@ve7tcp.ampr.org , and digital-dx@st.rim.or.jp
See also the OH2BUA Webcluster at URL

DX Bulletin 52 ARLD052 EXCERPTS

This week's bulletin was made possible with info provided by Tedd,
KB8NW, the OPDX Bulletin, The DX News Letter, QRZ DX, The 599 DX
Report, the Yankee Clipper Contest Club PacketCluster network and
the Contest Corral column from QST. Thanks to all.

DX Bulletin 52 ARLD052 EXCERPTS

This week's bulletin was made possible with info provided by Tedd,
KB8NW, the OPDX Bulletin, The DX News Letter, QRZ DX, The 599 DX
Report, the Yankee Clipper Contest Club PacketCluster network and
the Contest Corral column from QST. Thanks to all.

VIETNAM, 3W. Franz, DF5GF, has been reported active on 14296 kHz.
QSL to Franz Rebholz, Viet Duc Pedagogical University of Technology,
01 Vo Van Ngan St, Thu Duc, Ho Chi Minh City, Vietnam.

LIBYA, 5A. The 5A0A operation has been cancelled. SP6RT and SP6AZT
were in Benghazi but had to cancel their planned activity as 5A0A
because of the political situation in Libya. They are now back in

Poland.

JAN MAYEN, JX. Marit, LA4CJA, and Terje, LA3EX, will be active as JX4CJA and JX3EX on 80 through 10 meters, from now until April 15, 1996.

SAO TOME, S9. Look for Gamito, S92VG, his evenings on 15 and 20 meter CW. QSL to PO Box 173, Sao Tome City, Sao Tome.

EASTERN KIRIBATI, T32. Lothar, DJ4ZB, is currently active as T32ZB. He has been heard on 3799 kHz around 1030z and 0230z. Check 14192 to 14220 kHz between 0100 and 0230z and 18145 kHz before 0100z. QSL to his callbook address.

FAROE ISLANDS, OY. Ben, OZ5AAH will be active as OY/OZ5IPA, from November 1 to 6. QSL via his home call.

ISRAEL, 4X. Riki, 4X4NJ, will be active daily at his sunrise on 160 meters. Look for him on 1827 kHz. QSL via WA4WTG, R. Kaplan, 718 SE Third Lane, Dania, FL 33004.

Grenadines, IOTA NA-147. After the J3A CQWW SSB Contest operation, K9AJ, W9IXX, and KA9RHK will operate from Carriacou Island on CW, SSB and RTTY, signing J3J, J3X and J3Y, respectively, from October 30 to November 3. They will pay special attention to the IOTA frequencies. Note that the above J3 calls may be used from Grenada for testing prior to the contest, but they will be on NA-147 only during the above dates. QSLs for all three calls go to K9AJ.

Prefix Update. The T8 prefix has been assigned to the Republic of Pelau, which had been using the KC6 prefix. T8 has never been assigned to Seborga.

Special Event Station. HK100GM celebrates 100 years of radio communication through the end of the year. QSL via Rojas M. Edilberto, HK3DDD, PO Box 25827, Bogota, Colombia.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 225 EXCERPTS

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA2AEV, K4PI, KX4R, WA4FVT, K8PYD, KP4VP, 4X6TT, 5B4WN, 7L2RPY, DF4RD, DL9GOA & DX News Letter, EI6HB, F5PYI, JF1PJK, JH2PDS/1 and YB0ASI for the following DX information.

3D2/R, ROTUMA ISLAND. The Yamato Amateur Radio Club (JA1ZEK) has announced plans to be active from here November 4-7th. This is their second attempt to be active from here. Their first attempt was last summer but was spoiled by a typhoon which would not allow their airplane to fly from Nadi to Rotumo.

3V, TUNISIA. Hrane, YT1AD, will be in Tunisia again from October 26th until November 3rd. He will sign as 3V8MM and will also participate in both CQWW DX Contests using the callsign 3V5A. QSL via homecall.

4X7JY DXPEDITION UPDATE. Amir, 4X6TT, reports everything is still a go for their joint Israeli/Jordanian expedition to commemorate the first anniversary of the peace treaty between the state of Israel and the Hashemite Kingdom of Jordan. This will take place October 25-31st and they will be active on all bands and modes.

AFRICAN DXPEDITION. Roger, G3SXW, who was recently active as 9N1SXW from Nepal (making some 5579 CW QSOs), will be traveling to Ghana (9G) and Benin (TY) in November. There were no specific details reported about his trip. Stay tuned.

FO, FRENCH POLYNESIA. A member of the Lyon DX Gang, Joel, F5JJW, will be active from a few of French Polynesia's IOTA islands. From October 11-17th, he will be on Rangiroa Atoll (OC-066) and from October 18-20th, Manihi Atoll (OC-131). During the first week of his stay on Rangiroa Atoll he will also try to activate the island of Tikehau, which is in the same group. His callsign is unknown at this time. QSL via his homecall, either direct or via bureau. His address is: Joel Suc, La Grange, 69440 Taluyers, France.

KP4, PUERTO RICO. Ramon, KP4VP, will be operating digital modes (ie. PACTOR, AMTOR and RTTY) on a daily schedule from 2200 to 0030 UTC or later (if conditions allows transmission). Activity is limited to 20 meters (14.065 to 14.099 MHz), but he plans to use other bands in the future. QSL via Manager KD8IW, please SASE.

PACIFIC DXPEDITION. Fumio, JA3JA, will be active from the following place using CW/SSB/RTTY on 160-10 meters. Look for V73JA October 13-19th from the Marshall Island. From the West Kiribati, look for T30JA October 20-27th, and from Naura as C21/JA, October 28-30th.

SV/A, MOUNT ATHOS. Monk Apollo, SV2ASP/A, was heard active this past week operating RTTY on 14084 kHz around 1530z and again around 1930z. ADDED NOTE: The DXAC is presently active in discussions on a petition to possibly delete or withdraw this one from the DXCC List.

V7, MARSHALL ISLANDS. Samuel, AL7EL, has cancelled his KH9 DXpedition which was to take place this fall, but instead he will now be active from here as V7/AL7EL from October 18-25th.

ZL7, CHATHAM ISLANDS. Leo/K8PYD and Jon/WB8YJF, will be going to ZL7-land and will be active as ZL7PYD and ZL7CW, respectively. They will also be and entry in the CQWW CW Contest. More details will follow next week.

COMING EVENTS

OCTOBER 21ST-22ND JARTS WW RTTY CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President(Col) VK2CTD at VK2XSB, or the Secretary (Pat) VK2JPA
at VK2AAB.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB.
Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from
anywhere in the broadcast coverage area. We are looking for-
ward to news from your areas to let other amateurs know what
you are doing in the hobby. Hope to hear from you.

Divisional news

Divisional News

For the convenience of members, Council has decided that Parramatta office will once again be open Monday nights effective immediately.

Members and non-members can now purchase books, education service kits and morse tapes, visit the library, make enquiries or simply call in for a chat and a cup of coffee -

Monday to Friday 11am to 2pm
Mondays 7pm to 9pm

and even more good news ...

With effect 4 November the office will also be open for a trial period on Saturdays from 10am to 1pm.

Don't forget members get a discount on all book prices and if the book you want is not in stock but is shown on the list in "Amateur Radio", the office staff will be happy to order it for you.

Your Divisional Council working for you ...

Eric Fossey VK2EFY
Divisional Secretary

JOTA and VK2MJ Gateway

VK2MJ Packet Gateway

The VK2MJ Packet Gateway will be available for JOTA users. This Gateway is on 40 mtrs 7.0350, 2 mtrs 144.850, and 145.050. All country Scouts and Guides are welcome to connect to VK2MJ so that they can talk to their city cousins.

The Packet gateway is also a tcp/ip bbs so JOTA stations from other countries may also be using the bbs. You can talk to these stations on the local conference bridge or connect to them on their home station. So please make use of the VK2MJ Packet Gateway.

and connect on 40mtrs 7.0350 and 2mtrs 144.850.
Please leave 145.050 clear for telnet use.

Mike VK2MJ@VK2MJ
telnet gw.vk2mj.ampr.org 44.136.10.6

JOTA: opening ceremony

Jamboree-On-The-Air national opening ceremony

The national opening ceremony for JOTA will again be broadcast from VK1BP on Saturday afternoon October 22nd. It will commence at 0400Z on frequencies of 7.090 MHz, 14.170 MHz and 21.190 MHz simultaneously.

Please note this is a change in the 20 metre frequency to 14.170.

Following the speaker the usual call-backs will be taken on each frequency in turn, one at a time, returning to each band until there are no more callers. If you do not get through in the first dogpile keep on trying.

I would appreciate advice of your handle, QTH, call sign, the closest regional city or location and the approximate and the approximate number of young people the station is hosting during the whole weekend.

Good luck and many thanks for for your J.O.T.A. efforts.

73's Peter VK6HU
National J.O.T.A. Co-ordinator

UN50 & JOTA

UN50 Program

The United Nations celebrate their 50th anniversary this year. Several activities will be organised to commemorate this anniversary. The official anniversary date is October 24, two days after the JOTA. As you know, the world organization of the Scout movement (WOSM) cooperates with several UN agencies on various issues and in different parts of the world. The following activities are organised for the 38th JOTA to commemorate the UN 50th anniversary.

HB9S, the Worlds Bureau's station will transmit a message from UN Secretary General Boutros Boutros-Ghali, and/or other officials. Exact transmission times and frequencies are indicated below.

The World Scout Bureau's radio station HB9S will operate from Geneva, most of the Saturday and Sunday, with short breaks during the night. Transmitters will be on the air simultaneously on the 10/15/20 metre, 160/80/40 and 0.7/2 metre bands The station manager, Yves Margot, HB9AOF, will be assisted by Rochard Middelkoop, PA3BAR. World Bureau staff members and an internationa team of Scout radio amateurs. HB9S will transmit a JOTA message delivered by UN Secretary General Mr. Boutros Boutros-Ghali, and/or other officials, according to the following schedule on Saturday 21 October.

Frequencies

14. 290 MHz 09.00 GMT
14.290 MHz 14.00 GMT
07.090 MHz 14.15 GMT
14.290 MHz 18.00 GMT

Making a contact with HB9S takes some patience in Practice. Usually many stations are calling at the same time. Please follow the instructions given by the operators and do not interfere with on-going contacts. The operators will do the best they can to make contact with Scout stations world-wide and speak to Scouts in as many languages as possible.

VK2 WICEN news

VK2 WICEN News

Last weekend was the Hunter region Training Camp, at Lake Macquarie; around twenty people turned up, and a report will appear in the WICEN newsletter.

This weekend is the Hawkesbury Canoe Classic, commanded as usual by Kevin VK2CKD; this is a major event, and it provides practice in operating whilst portable. Tomorrow is the Hunter meeting, run by Pauline VK2GTB; and next weekend is JOTA.

A new event on the calendar is the "Troy Newman Cycle Trek", from Sydney to Newcastle, on Sunday 29th October. This event raises funds and awareness for "CanTeen" -- the Australian Teenage Cancer Patients Society -- and Hunter WICEN will be providing safety communications; the event commander is Steve Pettet VK2KBL.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB. Please note that the VK2AAB system is no longer operating as a BBS. Incidentally, we note that once again, these packet radio messages are not making it to the Publicity Officer, Dave VK2KFU; the "blockage" appears to be somewhere to the north of Sydney.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Magazine Roundup

Magazine Roundup

Due to circumstances beyond our control, this regular review will be held over until next week. In the meantime, here is a review of some other publications which may be of interest.

A new magazine, "Customising your 4WD" has a feature on selecting radio gear (CB and RFDS) for your vehicle. In another article on accessories, a Ron Fox reveals he is a Radio Amateur, sporting HF from 80m to 10m in his vehicle (and what looks like a Terlin

Outbacker on the bull bar).

The October-November 1995 of "Nexus New Times" has an article entitled "The RadioWave-Cancer Connection", by a Dr. Marjorie Lundquist Ph.D. From the magazine's contents page we report: "With the rise of radio broadcasting in the 1920s came a rise in childhood brain cancer incidence. Should we allow governments to overload the EM Spectrum?". It should be noted that last year, they had an article that "proved" the earth was hollow...

"New Scientist" features the report, mentioned in News Briefs, by the National Council on Radiation Protection on health hazards from powerline EMFs; the airborne system for checking soil salinity (also mentioned in News Briefs some time ago); the BBC's planned Digital Audio Broadcast service; the latest techniques for dealing with lightning strikes; and how solar power and satellite communications are transforming Africa. The net-aware amongst you will find the New Scientist on "http://www.newscientist.com".

Thanks to Richard VK2SKY for digging up the above items.

-- Dave VK2KFU

Dural report

Dural Report

Here again is a report on the various activities at the Dural broadcast station VK2WI.

At a Dural Committee meeting held recently, convened by the Council Dural Officer Tony VK2ZLT, Dave Horsfall VK2KFU/VK2ZTB was confirmed as the Station Engineer, and Tim Mills VK2ZTM became the Committee secretary. Many aspects of the station were discussed, in particular the need for better security to prevent the sort of thefts that occurred during a previous Council.

The 70cm repeater VK2RWI on channel 8525 is down in power, and it has been removed for service. We understand that the 10m FM service is suffering from low deviation, and this will be looked at shortly. Finally, the 23cm beacon also appears to be low in power; we were amused to receive a letter recently complaining about the beacon changing to vertical polarisation, against what appears to be common practice; as the beacon is still a vertical Alford Slot we would appreciate it if factual reports could be prepared, instead of pure supposition.

The Dural station will once again be sporting packet radio; the TCP/IP switch is being configured by Terry VK2KTJ, and a replacement BBS (if that's what users really want) is being sought.

Finally, the test equipment that was salvaged by Dave from the University of Western Sydney's scrap-heap is being refurbished, and will be made available for station use, thereby saving the

Division thousands of dollars.

-- Dave VK2KFU, Dural Engineer

News briefs

NEWS BRIEFS

COUNCIL LINKS POWER LINES & DOMESTIC APPLIANCES TO CANCER

In the United States, the National Council on Radiation Protection has said that electromagnetc fields (EMFs) from powerlines and domestic electrical appliances could increase the risk of leukemia and degenerative diseases such as Alzheimer's.

The report, funded by the US Environmental Protection Agency, said that existing recommended limits for exposure to EMFs were 5,000 times higher than the Council considered safe. It also recommended that power lines be kept away from residential areas.

The research cited in the report showed that exposure to weak electromagnetic fields alters the body's production of the hormone melatonin. Such disruption has been linked to breast cancer, brain cancer, and leukemia, as well as degenerative diseases such as Parkinson's, Alzheimer's, and coronary artery disease.

The Council recommended that exposure to EMFs be limited to 0.2 microteslas, which is just one five thousandth of the current internationally recommended limit.

Dr. Stephen Farish, a senior lecturer in epidemiology and biostatistics at the University of Melbourne, however, warned against over-reacting to the Council's findings, saying that the increased risk was "a small price" to pay for the benefits of electricity. He predicted that in the next decade a number of studies will link certain diseases to specific types of EMF exposure, and he mentioned a US study investigating a possible link between computer monitors and miscarriages.

The president of the Council, Dr. Charles Meinhold, said that the report was yet to be subjected to peer review.

The Electricity Supply Association of Australia dismissed the report, saying that its findings were out of step with other official reports release in the past three years.

(This next item is exactly as it appeared in the Sydney Morning Herald during the week...)

"RADIO QUACKPOT"

"A man who allegedly made duck noises on his CB radio was fined $2,000 in a Launceston court yesterday after pleading guilty to 16 charges relating to the operation and possession of an unlicensed radio communications

device. Don Desmond Davey, 57, had allegedly breached licence conditions by broadcasting something other than speech, namely duck noises."

If only the SMA were so vigilant with offenders on our bands...

Japan's consumer electronics giant, Sony Corporation, is branching out into a new and somewhat unusual field: the paranormal. The company claims to have proved the existence of Extra-sensory Perception (ESP), and is developing a diagnostic instrument based on some of the more exotic principles of oriental medicine, such a diagnosing illnesses by analysing one's pulse. The Sony Pulse Graph is based on a prototye created by a South Korean doctor of holistic medicine.

Sony has also set up the Institute of Wisdom, whose Extra-Sensory Perception Excitation Research division is working with 100 individuals gifted with ESP. They aim to explore "chi" energy, which forms the basis of much traditional oriental medicine and some martial arts.

GEOMAGNETIC: QUIET TO UNSETTLED

IONOSPHERIC: NEAR TO SLIGHTLY BELOW PREDICTED MONTHLY VALUES

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Manly Warringah

The MANLY-WARRINGAH RADIO SOCIETY's monthly lecture this Wednesday will be a talk on Personal Satellite Communications by Tim Jensen VK2ETJ. Doors open at 7:30pm for an 8 o'clock start.

The Society will also be active next weekend, running a JOTA station at the Narrabeen Lakeside Park. Operators are still required, especially for the Saturday evening shift, so if any members have some spare time, please join in the fun.

The Manly-Warringah Radio Society's meets each Wednesday evening at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills, with a business meeting on the second Wednesday and a lecture on the third Wednesday of the month. Visitors are always welcome, so please come along. Call in the club's 2m repeater, 146.875 MHz, if you need directions.

--Richard VK2SKY, MWRS Publicity Officer

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

The next meeting of the Waverley Amateur Radio Society will be held on Wednesday, October the 18th at 7:30 p.m. The venue is the society's premises in Vickery Avenue (off New South Head Road), next door to the Rose Bay R.S.L. club. Members and anyone else interested in amateur radio are invited to come along.

The speaker for the evening will be Richard Cortis, VK2XRC, who will describe the construction of simple VHF and UHF antennas for mobile land and maritime use.

The first Saturday afternoon of each month is project time so bring along any projects where other members may be able to help with problems. The last project session was devoted to the alignment of members' FM828 sets and was well attended with a number of sets up and running on 2 metres at the end of the day.

Don't forget that the society holds it's weekly Net at 7:30 p.m. every Tuesday using the Paddington 2 metre repeater on 147.025 Mhz. All are welcome to join in.

--Simon Buxton - VK2EII - Publicity Officer

Club news: AATC

The AATC will hold the next general meeting as usual on the 2nd Sunday of next month - note : at Chipping Norton - near Liverpool.

This meeting, owing to the limites space will be for financial members only and because the area is shared, it will start at noon. The topics covered will be the planning of Wyong Field Day 1996. A technical overview on projected ideas for the club by VK2XOF. A 3.5" floppy will be available with all the club soft ware. Comments from members using this will be welcome for modifications.

Regarding JOTA 1995 - The AATC is always looking for anyone interested in seeing ATV in action - and be part of irt at three sites.

Please contact Bob Barnes on (02) 587-3491 - most times - this is an open invitation to any amateur to participate in the JOTA weekend. Full hands on - of all equipments - from cameras to transmitters.

For more information about ATV - contact Bob the Publicity Officer on (02) 587-3491 between 4.00 pm and 10.00 pm Monday to Friday.

AATC Inc. Publicity Officer Bob Barnes

923. Re: Repeater directory program in alt.binaries.warez.ibm-pc

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-18 00:00:00 UTC
From: yee@mipg.upenn.edu
Message-ID: <YEE.95Oct18092628@picard.mipg.upenn.edu>
Source record: 236761

If you are looking for a repeater database, I believe mine is still
available at

ftp.mipg.upenn.edu:/pub/yee/rptr011*

Some of the other files in that directory are older versions of the
directory that I haven't bothered to delete.

Unfortunately, I haven't had the time to update the directory in about
a year.

Please let me know if the directory has been nuked.

You can probably salvage the coax. The mount won't have enough
capacitance to work properly down at 2 meters (not that through
glass mounts work that well anyway). Do it right, drill a hole
in the top and use a NMO mount.

Jeff, you should know there is equipment available to the police (it's used in CT and VA) that will pick up the signal produced by the oscillator in the radar detector (it's a super-het rcvr, remember?). Many manufacturer's are using better shielding now to reduce this possibility.

There will be a special event station on air(look around the general class freqs on HF, SSB and CW, all bands) from Circleville, OH Pumpkin Show.

Make contact, QSL to WB8PPH(callbook or telnet callsign,ualr.edu 2000) address is fine. Will receive a nice pumpkin show certificate.

Time: starting 1800Z 18-oct through 0000Z 22-oct.

Good luck, joe

>haven't already) another agency without teeth. No enforcement, just rubber
>stamping.

That's not really fair. I worked with Mr. Green of the Atlanta
office recently. He *wants* to solve problems, but he doesn't always
have the resources to do it. (I've heard all the fancy monitoring vans
are parked up in Maryland somewhere since their operators were RIFed.)
Mr. Green called on me to help him track down interference to the
Atlanta police department's repeater system. We were able to track
it to a GMRS repeater that was stuck on and putting out broadband hash.
We got it shutdown and zone 5 back in operation in about an hour and a
half from the time APD complained.

This was an easy one. Intermittant problems and odd mixes can drive
you crazy for months before you finally find them. Don't believe the
myth that the FCC can find anything in minutes. Even with the fancy
vans, they were often stumped. I worked with them on one odd problem
for 6 months off and on that was intermittently plaguing a friend's
repeater. We never did find it, it finally just went away. There
are some pretty sharp engineers working for the FCC, but they aren't
Superman, and even fancy monitoring equipment doesn't always tell you
everything, though it sure is neat to have. (I'd swap my old IFR and
Tek spectrum analyzers in a heartbeat for what they used to have
in those vans.)

We've been blessed with some really great people in the local office for many years. They have the attitude that they want to solve problems, not just write citations or shuffle papers. They've maintained very good relations with area broadcasters, and with a good many of the area amateurs. The recently retired long time EIC was a ham, and left the office with a pretty positive view of amateurs. (They're not fools, however. They know that there are some amateurs who are just glorified CBers with more powerful HF rigs, but I won't go into *that* can of worms.)

I too had problems with the telephones in the house being plagued with audio rectification. Caps and toroids didn't help my case however. I should explain first. I have a 3 band Dipole IN THE ATTIC and at 100 watts on SSB or CW it was being broadcast out of the telephone answering machine, the cordless phone, and it was even scrambling the Caller ID box. Not to mention being one horrendous nuisance to our televisions. The clue came when I noticed it did not bother the TV downstairs and only 1 of the sets upstairs. My Dipole has a bencher balun on it and RG-8au coax. I experimented and found that 7 turns of coax in a 8 inch loop was just the current choke I needed to keep the line fron radiating. This is just below the balun.

The TV upstairs, the one closest to the antenna is still being blown away, but that seems to be overload plain and simple. The phone problem is gone however.

A little experimenting goes a long way. Mike KB9KFE

: I have no connection to, or interest in $harper Image.

I know this doesn't help those who live in the USA, but in Europe the 77 KHz time standard freq. is common. Radio controlled clocks can be purchased in many department stores for less than US $10, though radio controlled wrist-watches are of course more expensive. Neither need any sort of external antenna, which makes them very handy. The ones that run off of a couple of AA batteries last one to two years before the batteries need replacing.

It'd sure be nice if such a system were implemented in the U.S. (yes, I know it's a big country). $250 for a clock is ridiculous. If you wanna spend that kind of money, go with the GPS and enjoy the "bonuses". ;-)

I have been reading this newsgroup for the past year. Initially
I thought Burt might be a jerk, but after this latest posting I
conclude he really is.

Ham radio offers different and unique thrills for all types. I personally
enjoy chasing DX, hense I call CQDX so I don't waste my time talking
stateside. That is no different than other hams 'chasing' states, counties,
grids, 10-10#'s, etc to acheive a variety of awards offered. Not
everyone turns on the radio 'just' to talk to someone else regardless
of their QTH.

There is enough spectrum for all to do their own thing. Whether its CW,
SSB, digital, RTTY, everyone has 'their' own interest and are entitled
to it. Who is Burt to tell everyone else how to initiate their QSO's?
Who made Burt the father of ham radio ? Perhaps Burt has not figured
out in 34 years that generally the DX hangs out at the bottom edge of the
band, therefore if he wants to work stateside, he should move up.
If he wants to work DX hang out on the lower edge and just call CQDX.
I don't think it will hurt his ego.

BTW, it does'nt take a 'big gun' to work DX. It just takes
'good ears' on both ends a little patience. If your an appliance
operating armchair copy type of guy, you'll never work any DX.

<snip>

Good advice, Gary. I don't think I could have said it much better myself. :-) Well, maybe I can add that the FCC's interference book states pretty clearly that interference to non-radio devices such as intercoms is not the fault of the transmitter. A non-radio device that picks up radio signals is "improperly functioning as a radio receiver," according to the FCC. Their interference book is sometimes available at FCC Field Offices (there is a list of them somewhere at our FTP site at oak.oakland.edu) or from the US Government Printing Office, Washington, DC 20402-9371, USA, Phone: 202-783-3238. You can order it by title, "Interference to Home Electronic Entertainment Equipment Handbook" for $2.00 postpaid.

>You might want to make a present to them of the FCC RFI booklet. Or
>if you are feeling generous you can buy them copies of the ARRL RFI
>book, or loan them yours (you do have a copy don't you?). These overload
>problems are fixable, but it may take some trial and error to find the
>exact suppression techniques that will work in each case.

In addition to the Radio Frequency Interference book, the ARRL has prepared a pamphlet that explains interference to your neighbor in essentially non-technical terms. You can obtain one or two by sending an SASE to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. (Don't forget to tell her what you want -- we sometimes get just the SASE). You might also want to get the RFI Package, which explains the issues, talks about some of the basic cures, and has lists of filter suppliers, etc. ARRL Members can obtain one for an 9X12 SASE with three stamps on it. If you are not a Member, you have to promise to join if it does you any good. :-)

>If you aren't experienced in dealing with RFI, sounds like you aren't,
>then ask at your radio club if they have a RFI committee, or ask the
>ARRL to point you to the TA for your area. They can help you deal with
>these problems.

You can easily find your ARRL Section Technical Coordinator, who can steer you to any local help in your Section, by contacting your ARRL Section Manager. They have their addresses and telephone numbers listed

on page 8 of QST. Let them know you are having an RFI problem and need your TC.

If you read the ARRL pamphlet, package and book, and still have questions about how to proceed, you can call me here at ARRL HQ (860) 594-0318 is my direct line. Perhaps we can put our heads together and find a solution. (The interaction of personal communication sometimes works out better than email.) Good luck with it.

73 from ARRL HQ, Ed Hare, KA1CV, ARRL Laboratory Supervisor

Hi,

my ticket to NYC has been confirmed some minutes ago and so I want to ask you
for the address of the "US ham licence department". Much more I am interested
in a fax-number or e-mail address, because my flight goes on December 26 and
I think there is not pretty much time for snail-mail communication.

Any hints or informations are very welcome.

If someone has the time (and the disk space), you could always download the entire ham radio
database from the FCC's ftp site. It's about 25MB. (You'd have to have a fast link, or a lot of
patience. :-)) The ftp site is: ftp://fcc.gov/pub/XFS_AlphaTest/amateur/ The files a broken down
by zip code for the entire database. There's a readme file at

http://www.fcc.gov/XFS_AlphaTest/amateur/readme.txt if anyone's interested.

This has been how I've been checking to see if my license has been issued yet.

If you know a friend who hasn't had a chance to call 1-800-322-1117 to find out if his call has been
issued yet, you can always check the weekly zipped file that contains applications processed for
that day.

The files are usually posted arouind 23:50 EST. Today's file will be called:
ftp://fcc.gov/pub/XFS_AlphaTest/amateur/wed.zip I'll be watching the date on this file. When it
changes to Wed Oct 18 23:50:00, I'll download it and see if my name is in the database.

It's also a good way to find other people close to you that just recently been issued they're call.

Have fun with this. I have.

Brett Kappenman
brett@halcyon.com
KC7N?? (I'll hopefully know the call tonight. 40 minutes and counting.)

:>That's not really fair. I worked with Mr. Green of the Atlanta
:>office recently. He *wants* to solve problems, but he doesn't always
:>have the resources to do it. (I've heard all the fancy monitoring vans
:>are parked up in Maryland somewhere since their operators were RIFed.)

Fair? I'm sorry, but what planet are you on? Who says things in life are fair? :-)

I'm glad to see that certain public safety channels are being taken care of, but let's face facts. Unless you're in the public safety arena, you're not going to get much of anything out of the FCC these days. Sad, but true.

:>Mr. Green called on me to help him track down interference to the
:>Atlanta police department's repeater system. We were able to track
:>it to a GMRS repeater that was stuck on and putting out broadband hash.
:>We got it shutdown and zone 5 back in operation in about an hour and a
:>half from the time APD complained.

Again, nice to see the problem solved, but it's a sad affair when a governmant agency has to rely on commercial avenues to solve things that they are SUPPOSED to be doing.

Now, having said that, I'm well aware of the lack of funding that the FCC is constantly faced with, but there are certain things that they could do that don't cost tons of money. One thing that LEAPS to mind is some sort of MANDATORY RFI specs that ALL manufacturers MUST adhere to. That one little bit o' tooth would go a LONG way to quelling the tide of RFI/TVI complaints that they can't do anything about due to lack of resources.

<snip>

:>We've been blessed with some really great people in the local office
:>for many years. They have the attitude that they want to solve problems,
:>not just write citations or shuffle papers. They've maintained very
:>good relations with area broadcasters, and with a good many of the area
:>amateurs. The recently retired long time EIC was a ham, and left the
:>office with a pretty positive view of amateurs. (They're not fools,
:>however. They know that there are some amateurs who are just glorified
:>CBers with more powerful HF rigs, but I won't go into *that* can of
:>worms.)

Well, I don't say that I know much about the folks at the Langhorne, PA office, but I can't say that they're very interested in helping anyone outside of public safety. Just try and get them involved with any John Q.

Public interference problem and see how far you get.

Maybe things are different down in GA, but they're pretty pathetic up here in the Phila., PA area. Guess it all depends on your experiences.

I also object to RS asking for my name and address. I finally just decided to say "Cash" everytime they ask.

However, this last time I had to return some $2 part. I absolutely had to give my name and address and phone number. FOR WHAT? I purposely avoid giving my name and addr. to RS because of their mass-mailings. However, I didn't need the part,so I had to give in. In retrospect, I should have given them a bogus address so that at least I'd never get the junk mail they send.

I can understand their desire to need my address if I return something for warranty, but for something that I'm giving to them for them to keep and receiving cash in return? There is no excuse for their policy. To their credit, the guy finally sensed I really objected to getting their junk mail and added "Send no flyers" in the system. I have questions if that will work (he said it didn't always).

It is just another reason I almost never go to RS for anything other than parts.

Ms Feasance-

Radio signals can most certainly be traced. Called radio direction finding (RDF) or simply fox-hunting, it involves a team of hams (or gov't people) combing the area while listening to/watching signal strength meters. However, for the signal to be tracable, it must be transmitting. The signal source can be found fastest by 'triangulation', where three hams with HIGHLY-directional antennas coordinate and aim their antennas to the point where the signal is strongest. When all three point to the same area, you very likely found the problem.

THe FCC can find stations from hundreds of miles away using this system. Just ask a few pirate stations or people making illegal marine transmissions how they were found.

>Generals upgrading to higher classes.

I happened to be peusing this; it's pretty clear where things are going:

Relative demand of each element at ARRL-VEC testing sessions:

element	percentage
1a	7%
1b	13%
1c	8%
2	18%
3	31%
3a	30%
3b	10%
4a	9%
4b	5%

These stats are for the last 10 years, though; even so, it sure looks weighted towards the codeless techs to me. Recent sessions I've been at have been about 50% no-codes, but that's only a minor (and urban) datapoint... (Many of the others have been no-code techs upgrading, though; make of it what you will. I'm sure someone from the ARRL will come up with a boatload of statistics for us eventually...)

Hello,

This summer I visited the USA and got my reciprocal licence as follows:

From the dutch radio amateur club VERON I received a form FCC 610-A and send
this with a copy of my licence to:
Federal Communications Commision
1270 Fairfield Road
Gettysburg, Pennsylvania 17325-7245
phone (717) 337-1212

In a month I received a reciprocal licence, with a duration time of a year.

Some hints:

1. Read the licence rules/regulations. They are called:
Part 97, Amateur Radio Service. You will find them on several dedicated
WWW-ham-radio-servers, the ARRL has one.

2. Your call sign will be constructed like: W1/OE1GOU. The prefix depends
on the state you are visiting. This is described in a fact sheet #206:
Amateur station call sign assignment system.

3. Call signs are "big business" in the USA.
If you got a (reciprocal) licence, your own call sign will be
found in several call sign databases,
by example QRZ-www-server and QRZ-CDROM.

4. Prepare yourself for the use of the frequency-range and
the use of repeaters.

Have a nice trip,

73's de Ruurd, PE1DXQ

> radios so that the squelch only opens for other RTTY signals.

Is 2 meter RTTY illegal? If not, why do you seem to be able to pass
judgement on it and say that it's time has passed?

Other modes are having equal difficulty find suitable space in an FM
channelized band. 2m AM operation is one of those modes. Some people
say that it belongs in the weak signal portion of SSB. Others say it
belongs in the middle of the new Oscar subband at 144.4. Others say it
belongs in the miscellaneous and experimental subband between 145.5 and
145.8. There seems to be a lot of packet usage in that range. Others
have suggested that AM operation could set up shop on an unused FM
simplex frequency. So far, this seems to be about the best solution.
Certainly AM is simplex in nature. (I can't think of any AM repeaters
that have been coordinated off hand...) I would presume that the RTTY
operation is going to be simplex, also, if it is going to work in a
simplex portion of the band where repeater inputs/outputs are not
allowed.

I guess my main point is that one shouldn't pass judgement on a mode
simply because they don't use it or there aren't that many people who use
it locally. There just may be plenty of use in another part of the
country or continent.

73,
Ken

Bob,

Experiment #1: disconnect the vehicle battery and power the amateur radio independently; this will isolate the source of the carrier to the radio or the vehicle's electronics

Experiment #2: if #1 results are that the carrier disappears with the vehicle power then you know what you have to do (i.e. start pulling fuses in the Exploder's (sic) electrical system to isolate the noise generator)

Good luck - let us know what you find.... 73s KE4END Mike

==========
It depends where you plug the adapter in!
If you plug it into the battery pack, you'll blow the HTX upon transmitting.
If you plug it into the top of the unit, you're OK.
I have both the 202 and 404 and I'm happy with them.
Good luck.

I use the newer version and have never used
the older version so I can't compare. I do
know that it works better than I expected it
to, and would recommend it to anyone.

Everyone that comes over to see it go's out and
buys one, so that must say something. I can't believe
its performance.... I call my wife into the room
aalmost everyday and let her hear what it does.
I say buy it and to others reading this reply using
older radios , it makes the need to buy a new rig
go away. DSP is the only way to go.... Tim WB8BCO

>battery? Will the battery withstand this current load and will the car
>be able to recharge the battery to its full state?

>Any advice is appreciated.

Number of radios? How many to connect?
One radio, two radios? What the heck!
The number of radios is no trick,
I've connected three, stacked on a stick!
No, the number you have is really no pain.
But you gotta watch out for your current drain.

If your driving along and your lights go dark,
turn off that radio or be prepared to park!
With a tiny little battery and alternator whine
I'd get a bigger battery and make it mine.
If the dash doesn't show an electric meter
I'd add one in and make my system neater.

How to know your recharge is at full state?
Hit the road a 'rolling and accellerate!

(with apologies to Mason Williams for the style/meter)

Netters,

I have a Heath HD-1410 (maybe it's a HD-1416) Electronic Keyer.
Got this as a freebee. When I run power into it it starts beeping and
the paddles don't seem to effect anything. Correct me if I'm wrong but it
is not supposed to beep (Dit or Dah) unless I hit the appropriate paddle.

Any guess as to which part maybe bad?? Looks like the Cap/Resisters and
Diodes are all okay visually. There are 5 small socketed IC's. I tried to
reseat them but still the same problem.

Does ANYONE have the schematic for this kit???

In one of Bill Cheek's scanner modification handbooks, he mentions using
a spray nickel or silver sheilding material on the inside of the cases of the
scanners to reduce interference. I've never tried it, but it may be a way
of diminishing the oscillations from a radar detector.

>Why would one want the magazine anyway?
> I challenge anyone to justify the cost on the
> basis of the technical content!

Your challenge will remain unanswered because
QST isn't intended exclusively as a "technical" magazine --
IT is the monthly membership journal of the biggest
amateur radio club in the world. As such it must meet
the needs of ALL the members, some interested in
technical matters, some in public service matters,
some in contesting matters, some in DX matters, some
in HF, some in VHF/UHF/Microwave, etc., etc.

If you want a great technical magazine, check out
another ARRL periodical named "QEX".

Ditto. If you make it too easy, then there isn't anything to learn or accomplish in Ham Radio. If the privilage of Amateur Radio is just given to you, then people start taking it for granted. Don't try to take advantage of the system, just work harder and make accomplishments. Remember, when the going gets tough, the tough get going. There is absolutly so substitute for putting out the extra effort to get the additional privlages.

981. Callsign Question?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-19 00:00:00 UTC
From: HGDJ50A@prodigy.com
Message-ID: <466dgd$si8@usenetp1.news.prodigy.com>
Source record: 236671

Is it possible to pick your own callsign if you are about to become a

lisensed amateur? If so what is the procedure? I have checked the QRZ
call
sign dtabase and no one has been asigned the one I want.

THANKS FOR YOUR HELP

982. Re: FT-890/AT overheats during RTTY xmit

Newsgroup: rec.radio.amateur.misc

Source record: 236672

Hi Warren:

I have the 890, but no direct experience with RTTY or continuous carrier transmit. I believe I read in the manual that you must turn down the power for AM or RTTY since the radio will heat up so fast and the fan cannot keep up with it.

What you are running into is the size of the rig. The compactness has forced Yaesu to "duct cool" which is a fancy name for inefficient cooling in a sense. If you have a big rig like a Kenwood 940, it will run RTTY all day with the fan on. If you have a Ten Tec OMNI, it will run RTTY all day without a fan. However, both of these are more than double the size of your Yaesu 890. You just can't build a rig that small to run 100 watts without some compromises, and cooling the finals is the one in force here.

I would, if I were you, put an extra fan (a box fan of 3 or 4 in. diameter) on the back of the rig while running RTTY, even when running at 40 watts. The heat is an enemy of many components, and an extra fan just standing behind the rig is cheap insurance for premature failure. If you are anywhere nearby me in Southern California, I can give you one, I have a bunch in my closet, and I keep them behind my equipment for when I am operating a lot. It just makes sense.

Good luck.

>(Gary Coffman) writes:

...snip

I must backup Gary on his assertion that the FCC *is* generally
interested in solving problems. As TC for Colorado, I worked with the
Denver Field Office a lot and a better, more dedictade bunch can't be
found. they are trapped by non-existent funding and a sever lack of
personnel. A team of three engineers is supposed to cover Colorado,
Wyoming, New Mexico, and half each of Nebraska, North Dakota and South
Dakota. Oh yeas, they have to answer the phone, too, since their Public
Information Officer position was eliminated. Then there's paperwork to
contend with as well. You shoudl have seen the requirements laid on them
whne the President came to Denver. they literally had to drop *EVERYTHING*
to tend to teh Secret Services intermod problems!

>Now, having said that, I'm well aware of the lack of funding that the FCC is
>constantly faced with, but there are certain things that they could do that
>don't cost tons of money. One thing that LEAPS to mind is some sort of
>MANDATORY RFI specs that ALL manufacturers MUST adhere to. That one little
>bit o' tooth would go a LONG way to quelling the tide of RFI/TVI complaints
>that they can't do anything about due to lack of resources.

Be careful what you wish for, Jim, because you just might get it.
What constitutes a reasonable RFI resistance? Pick a number, any number,
and then use the power the FCC has to force manufactuuers to conform.
Great! But, what happens when RFI occurs anyway? Here's a likely
scenario: Neighbor has RFI, calls appropriate agnecy. Agenecy checks
consumer's equipment and pronounces it within compliance. Agency check's
ham's equipment and pronounces *IT* within compliance. Agency then checks
fieled strength. Lo and behold, the FS exceeds the design limits for the
consumer electronics gadget. So, the ham is told to decrease the FS from
his station within the vicinity of the consumer electronics device or face
quiet hours. Sound far-fetched? That's how it works in much of Europe and
Canada. Once the manufacturers have met whatever spec is tossed out, then
they're off the hook!

Make a spec that can't possibly be exceeded, you say? I think not.
Nobody wants to pay for a TV that's good for, say, 1000 V per meter FS at
1.8 through 1200 MHz, do they? That let' another worm out of the can:
since we must apply some bandwidth limits of the RFI suceptibility, what
should they be? Near-field strengths can be outrageous in spots; what do
you tell a neighbor who happens to have their living room or familiy room
in one of these spots?

Please understand that I'm not saying "there is no solution", but mandating some kind of RFI compliance is sword with two, very sharp, edges. It's not all cut-and-dried because everyting has implications.

>:>We've been blessed with some really great people in the local office

>Well, I don't say that I know much about the folks at the Langhorne, PA
>office, but I can't say that they're very interested in helping anyone
>outside of public safety. Just try and get them involved with any John Q.
>Public interference problem and see how far you get.

Since you don't know what kind of load they must deal with, you can't possibly know what to expect from them, can you? In Denver alone, I watched the Public Info. Officer answer the phone for almost 4 hours, straight. Without a break. Dealing with John Q. Public. Most of it was interference from non-amateur sources. For the FCC to personally go out and solve or mitigate each and every one of these complaints is unreasonable in the extreme. As TC, I had to tell some hams that, inorder to get the FCC and power company to work on an interference problem eminating from some parking lot area, they had to at least narrow down which lot it was! they were furious: "Whay shoudl we have to do that? Isn't that what the FCC is for?" We tend to lose sight of a simple fact: there is more out there than just ham radio that the FCC is charged with looking after. Telephones, paging systems, BC stations of all types, CATV systems, public service interference, CB (yes, they *do* look for egregious violations), marine installations, and ham radio. I'll bet that the PA office you mentioned has its hand full just doing inspections of shipboard installations.

WE *MUST* LOOK AFTER OUR OWN! We have the expertise to solve almost all of our own RFI problems through RFI committees and the TC/TS system. The FCC office in Denver was *happy* to help when we needed it, to provide equipment and training when we needed it and to back us up on our findings and recommendations. I'll bet that the same partnership could be forged in your area, too. Nobody is more frustrated by their lack of resources than the FCC personnel "in the trenches". They happily accept whatever help we can provide! Were problems always "solved"? No, but the complainant knew what steps had to be taken to fix it. Were hams always happy with the results? Usually, though on rare occasions we would find spurs or harmonics. And, if you want to be a hero just help solve a sticky RFI problem bewteen two neighbors: they become friends again and the non-ham neighbor has a whole new, very positive perspective on ham radio. If there are any areas where any ham can provide "state of the art" help, it's RFI.

We will forever be part of the problem until we chose to become
part of the solution. People like Gary should be commended for their
volunteer work and help towards teh FCC and ham radio. We may complain all
we want about the way things are, but passing all responsibility for
solutions onto an overworked, underfunded government agency will do nothing
more than guarantee that ham radio's RFI problems will only get worse.

Kim Elmore, N5OP

Perhaps the GPS clock is displaying astronomical time. According to my
Heathkit clock, there's a large fraction of a second difference between
astronomical time and UTC. I believe a leap second has been scheduled at
the end of the year to bring them closer again.

In a previous article, andy@clark.net (andy) says:

>: Why do you think that most of us buy our major electronic stuff at
>: other non-RS stores. Think how the sales at RS would increase if they
>: just made it easy to do business with them and they improved the sorry
>: state of their quality.
>
= = = = = = = = = = = = = = = = =
I'm probably a minority in this matter but I'm happy with their products. I have an HTX 202 and 404 and a 400 channel scanner from RS. All products work great and their fix it policy is cool. If it's broke, you most likely get a new one rather than have it fixed. I'm sure that some products are not competitively priced but I have the patience to wait for sale items. I'm not a person who needs it NOW.

Having said some nice things about RS, I AM REALLY PISSED ABOUT THEIR POLICY OF ASKING YOUR NAME, RANK, SERIAL NUMBER, SIZE UNDERWEAR, PHONE NUMBERS, ADDRESSES, BRA SIZE OF GIRLFRIEND, HOW OFTEN YOU GET LAID, YOU GET THE DRIFT.
I think it is unsafe to tell your phone number and address in front of many people who you don't know and may quite well inform about a good location to burglarize (since you bought a new toy that they like to have.)
Solution: Smile and kindly but firmly tell them that you don't want to give that information. The firm part has done it for me. They never ask me twice.
Anyway, that was my 2 cents worth.

All things being equal, fat people use more soap. :)

ZCZC AE30
QST de W1AW
DX Bulletin 54 ARLD054
From ARRL Headquarters
Newington CT October 19, 1995
To all radio amateurs

SB DX ARL ARLD054
ARLD054 DX news

This week's bulletin was made possible with info provided by Art, W6XD, Bob, WB2DIN, the OPDX Bulletin, the BARF-80 BBS, Tedd, KB8NW, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

HEARD ISLAND DXPEDITION UPDATE. This operation remains on schedule. All cargo being held in Perth, Western Australia, will go aboard the DXpedition ship for a November 1 sailing date. 3Y0PI team members ON6TT, KK6EK, HB9AHL, JH4RHF, N6EK, PA3DUU, RA3AUU and K0IR are expected to arrive at Heard Island on or around November 12. Sea and weather conditions will no doubt have some bearing on how soon stations are on the air. Plans call for CW, SBB, RTTY and satellite activity until departure on December 1. Some innovations tested during the recent XR0Y operation from Easter Island will be used by the Heard Island team.

Beacon station K6DIR/MM will be activated as the ship weighs anchor and will remain on the air until the team becomes active from Heard Island. A home page on the World Wide Web will be run so amateurs can see if they are in the log. QSL via W4FRU.

MADAGASCAR, 5R. Ben, 5R8DS, should remain active on CW, SSB and AmTOR until November 1 when he returns home. Try 14015 kHz around 1910z, 24901 kHz around 1319z and 18140 kHz around 1408z. QSL via PA3BXC, his home call. If direct, enclose SASE.

ZAIRE, 9R. Alex, 9Q2L, will operate 9R1A in the CQWW SSB Contest October 28 and 29. QSL via PA3DMH.

BURUNDI, 9U. F5FHI and EA1FH will be in the CQWW DX SSB and CW Contests on all bands. Details and call signs were not mentioned.

SAN ANDRES, HK0. KH8AL, NL7GP, JI3ERV and JH1NBN will be active October 27, 28 and 29. They will sign KH8AL/HK0 during the CQWW DX SSB Contest. QSL via JH1NBN.

PRINCIPE ISLAND, S92. F5OGL, F6AXX, F6BQY, F5HX, F6HHV will sign S92P from IOTA AF-044 November 21 to December 6. Activity will be all bands with CW, SSB and RTTY. They will also be in the CQWW DX CW Contest. QSL via F6KEQ.

BENIN AND GHANA, TY and 9G. A team comprised of G3SXW, GM3YTS, K5VT, KC7V and N7BG will operate Multi/Multi from Benin during the CQWW CW Contest in November. Listen for TY5A. QSL via GM4AGL.

Outside of contest hours listen for G3SXW as TY5SXW, GM3YTS as TY5RF, K5VT as TY5VT, KC7V as TY5MF and N7BG as TY5AR. QSL via home calls.

The team will arrive in Accra, Ghana, and spend a few days operating some casual CW November 18, 19 and 20. Listen for G3SXW as 9G5SX, GM3YTS as 9G5RF, K5VT as 9G5VT, KC7V as 9G5MF and N7BG as 9G5AR. QSL via home calls.

ANTIGUA AND MONTSERRAT, V2 AND VP2M. JH1NBN will be on vacation November 23 to 27. He plans to operate mainly SSB, but with some CW. No call signs have been mentioned. Try 14200 kHz. QSL via JH1NBN.

MICRONESIA, V6. Tak, JE1SCJ, and Kuzu, JA0VSH, will sign V63YT and V63KZ, respectively, operating from Pohnpei October 20 to 25. Plans are for CW and SSB on 160 through 6 meters. No SSB will be operated during evening hours, their time. Suggested 160 meter frequencies are 1824.5 kHz for USA and Japan, and 1827 kHz for Europe. QSL via home calls, direct or bureau.

CHRISTMAS ISLAND AND INDONESIA, VK9 AND YB0. Ron, ND3A, will be on a business trip starting October 16. He will be in Jakarta for 3 or 4 weeks and then plans a one week vacation on Christmas Island. From Jakarta he will try to operate as YB0ASI from the station of AA4U during CQWW SSB Contest. QSL his YB0ASI operation via WA4FVT.

Rob has license in hand for Christmas Island. Listen for VK9XRS on 160 to 10 meters, mainly on CW. If time allows, he may operate during the CQWW CW Contest. QSL via ND3A.

CRETE, SV9. Jukka, OH1JJS, will vacation in Crete October 22 to 29. Activity will be on all bands with CW and SSB, pending hotel management approval of antennas.

CORSICA, TK. Members of the TK-Contest-gang and the Bavarian Contest Club will be in the CQWW SSB and CW Contests. Listen for TK2C. QSL via DF7RX.

MONGOLIA. Art, W6XD, and a group from California will sign JT1Z during the CQWW SSB Contest. Before contest hours, starting October 25, listen for them signing from the JT1FAU to FAZ call sign block.

They will operate after the contest until October 31.

JORDAN/ISRAEL DXPEDITION. Listen for 4X7JY and JZ7JY operating from Mount Nebo, on 160 to 6 meters, CW, SSB and RTTY.

THIS WEEKEND ON THE RADIO. Here are this weekend's operating events. Rules for the ARRL Simulated Emergency Test are in September QST on page 65. For information on the Boy Scout Jamboree On The Air, JOTA, check page 58 in June QST. Details on the Illinois and Texas QSO Parties appear on page 127 in October QST.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 OCTOBER AND FORECAST FOR 20 OCTOBER - 22 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 18 Oct
Daily Proton Fluence >1 MeV: 1.2E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.6E+06 (normal)
X-ray background: A5.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Oct 21 Oct 22 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Oct: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to active.

Estimated Indices : A K Observed A Index 18 Oct
Learmonth 14 3343 2233
Fredericksburg 24 25
Planetary 44 24

Observed Kp for 18 Oct: 2213 3346
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
20 Oct 20 Quiet to active
21 Oct 10 Quiet to unsettled
22 Oct 7 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 26 was issued on 19 October and is
current for interval 19-20 October.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
19 Oct normal fair poor-fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Oct normal fair poor
21 Oct normal normal fair
22 Oct normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
19 Oct -14

Observed Australian Regional MUFs:
Darwin MUFs were mostly 10-30% depressed.
Townsville MUFs were near predicted monthly values.
Sydney MUFs were 10-30% depressed, with regular Sporadic E layer.
Hobart MUFs were 10-30% depressed.

>call sign dtabase and no one has been asigned the one I want.

database, assigned.

but the spelling nits are beside the point. go check out the ARRL bulletins that have come out recently and the last ARRL letter for all the gory details, and also QST magazine, but in your case, before you can pick your call, you have to first earn a license.

next - which group is your call in? if it's group A you'll have to have an Extra license, group B is advanced, group C is general/tech, and group D is novice.

you'll also be the last to get a shot at the call...previous holders of the call get the first shot at it followed by radio clubs and then amateurs starting with the Extras and working down.

there's no date for implementation of this plan, but the rulemaking is done for now.

Well now you're displacing RS from the center stage. Read the
warranty for your car, lawn mower, motorcycle, bicycle, luggage,
whatever - you'll see the "non-transferable" clause explicitly
stated.

RS insures you're the original owner by requiring your name and
address on the sales receipt. Note you can always refuse to
provide your address - they certainly won't cancel the sale.

If you're looking for 1-20 meter accuracy look for one that has a
built-in receiver to receive the differential signal from US Coast Guard
transmitters that are scheduled to go on-line on 1 Jan 96. Although
the coverage from the dGPS facilities only covers ocean, inland rivers
and great lakes areas, there is a strong possibility that the system will
be expanded to cover all of the lower 48 in the future. I can't tell you
who sells the hybrid GPS/DGPS receivers but if you shop around you'll
find something.......Ron, W4VR.

I run the same rig on RTTY. The thermal interlock may kick out on you at
100 watts on RTTY because of the continuous duty cycle. I have always run
mine at 50 watts anyway because it's usually a good idea to run half pwr on
RTTY. Remember, the difference between 50 and 100 watts at the receiving station
is only one 'S' unit anyway. I also use mine on Navy MARS and sometimes have to
xmit long bulletins on RTTY. I have never had the rig kick out on me on > 3 min
xmits but I do have a pancake fan laying on the rig to help on protracted
xmissions. I have experimented by running 100 watts into a dummy load on
continuous CW keydown to see how long it would go. I got bored after awhile
when it did not kick out. You also might check your TNC. My KAM had a
"watchdog" timer that stopped the xmission after 2.5 minutes. I thought it
was my 890 kicking off.

Hope this helps.

Check out the latest (in Sweden anyway ;-) issue of QST. There was a
patch antenna design worthy of McGyver - two pieces of aluminum & a
connector. With 10 feet of RG-58 the signal strength was about the same
as with the original antenna, about 3 dB higher with short feedline.
I'm building one of those soon - can't get much simpler!
Good Luck

You have a coupla choices:
1. Buy a radio/ALE combo from Rockwell, Harris, Mackay or others.
2. Have SFA DataComm in Frederick, Md, design an interface between your
radio and their ALE modem.

I'm not connected with any of these, so check with them for prices. I can
tell you that 1. will cost many times more than 2., and that the cheapest
approach is probably somewhere around $2-3k.

There are about 10 manufacturers all told. A version for the ham market
is much to be wished for and involves marketing considerations I can only
guess at. The market seems large, and if somebody entered it, prices
could fall considerably. Fear of that could be preventing existence of
the wished-for condition.

When amateur spectrum comes on the chopping block, the ARRL is able to use the fact that Amateur Radio is not a significant administrative burden on the FCC to good effect. The fact that, for the most part, we take care of our own problems speaks highly of the technical aspect of the public service offered by Amateur Radio.

From ARRL Headquarters
Newington CT October 20, 1995
To all radio amateurs

SB SPCL ARL ARLX063
ARLX063 CW practice for Alaskans

A new code practice station is on the air from Alaska. Sponsored by the South Central Radio Club, of Anchorage, and signing KL7CC, the station is on daily on 80 and 2 meters.

Each session runs about 40 minutes, daily, at 7 AM, 10 AM, 4 PM, 7 PM, and 10 PM, Alaska time, on 3.575 and 145.35 MHz. (Alaska is 8 hours behind UTC until October 29, then 9 hours behind). About 10 minutes of text are sent at 22, 15, and 7 wpm. The slower two speeds are sent by the Farnsworth method; 22 wpm is non-Farnsworth (W1AW uses Farnsworth up to 15 wpm, and non-Farnsworth at 18 wpm and higher speeds).

The club is currently using the home station of Jim Wiley, KL7CC, running about 100 watts on both 80 and 2 meters. Sometime in the future, power on 80 meters will be increased to 400 watts output, and the station eventually will be installed at the club's facility, and will then sign WL7CLY. The Quarter Century Wireless Association donated 300 dollar(s) to the project, according to Wiley.

Text for the station is primarily from the pages of QST, and is being provided by ARRL staff from text files used for the same purpose at W1AW.

The club wants reception reports. Send them to Jim Wiley, KL7CC, 8023 East 11th Court, Anchorage, Alaska 99504.

From Tad Cook, KT7H
Seattle, WA October 20, 1995
To all radio amateurs

SB PROP ARL ARLP044
ARLP044 Propagation de KT7H

Average solar flux was up about 10 points over the past week when compared to the previous period. Flux peaked around 92 on October 12, and has been declining toward a bottom out near 70 after November 1. It should peak again in the mid-eighties around November 8 and 9.

Geomagnetic activity has also been up for the past couple of days, and should continue for a day more. Watch for unsettled conditions around October 25, and then truly stormy periods around the end of this month and through the first week of the next.

Sunspot Numbers for October 12 through 18 were 73, 74, 73, 50, 67, 55 and 43, with a mean of 62.1. 10.7 cm flux was 92.2, 87.9, 87.2, 83, 85.6, 84.6 and 81.5, with a mean of 86

Path projection for this week is from the center of the continental U.S. to Asia, South America and Europe.

Toward Asia check 80 meters from 0800 to 1330z, 40 meters from 0700 to 1430 and 30 meters from 1400 to 1600. 20 meters looks good from 2100 to 0030. 17 meters may have an opening around 2200.

South America looks good from 2330 to 0930z on 80 meters and 2300 to 1000 on 40. Check 30 meters from 2200 to 0300 and again around 1030. On most days 30 should be open past 0300 to 0730. 20 looks good around 1430 and again from 1900 to 0030 and 17 meters from 1500 to 2300. 15 meters should be open from 1600 to 2130. Check 10 meters around 1800.

For Europe, 80 meters should be open from 2300 to 0700z and 40 meters from 2200 to 0500 and 0700 to 0900. Check 30 meters around 1930 to 2130 and 20 meters from 1500 to 1830.

ARLB097 Morse speed change denied

ZCZC AG64
QST de W1AW
ARRL Bulletin 97 ARLB097
From ARRL Headquarters
Newington CT October 20, 1995
To all radio amateurs

SB QST ARL ARLB097
ARLB097 Morse speed change denied

The FCC has denied three requests to lower the Morse code requirement for the General Class Amateur Radio operator license.

The requests, in the form of letters, came from three Technician-Plus class licensees. All three asked that the 13 wpm Morse code requirement for the General Class license be lowered to 5 wpm. Two of them also asked that the Technician-Plus operator license class be eliminated and that holders of Technician-Plus licenses be granted General Class operator privileges.

In an Order released October 19, 1995, the FCC said ''The current amateur service license structure and examination requirements were developed in accordance with the expressed desires of the amateur service community through numerous rule making proceedings that generated many thousands of comments.

''The amateur service community indicated on each occasion that it strongly desires to preserve communications by telegraphy. After considering the views expressed in those proceedings, the Commission adopted the rules that are codified in Part 97'' (of the FCC Rules).

''The requesters have not presented sufficient evidence to justify revisiting these matters at this time,'' the FCC said.

I've had poor luck with all the air dialectric cables. My cable runs start underground in the basement, run 100 feet in PCV 3 feet below ground, and then running 100 feet or so up the tower. No matter HOW well you seal the air stuff the first day there is a large temperature differential between the ground and the air you'll get condensation in the coax. The only solution i can see is to pump bottled air or something through it to keep it dry or live in Arizona.

If you want technical content, then go read an EE journal. The American amateur radio community is made up of *amateurs* not professionals (notice those words are antonyms!). The ARRL has to write a journal that will interest the baker, mechanic, corporate exec, MD, English high school teacher, and all the rest of us *amateur* electronics folks. They've done a darn good job for the last 80 or so years.

My first exposure to QST was as a grade schooler. I was very glad it was written at the level where a young pup could make sense of at least some of its contents.

Are you studying to take an Amateur radio exam?

You may be working on your first license exam, or maybe
even an upgrade. You do want to pass that exam, don't
you?

Then you need to use AutoExam! AutoExam contains
all the question pools from Novice to Extra. Each
time you run it, a new random exam will be created.
When you can consistantly pass an AutoExam, you know
you are ready for the real thing. It works!

AutoExam is now available via the Web!

http://www.tiac.net/users/ImRich/rich.htm

Towards the end of my home page is a link to allow you
to download the self extracting .ZIP file. You will
also find AutoCW there. AutoCW will generate accurate
Morse code no matter what type of PC you have, from
4.77 MHz to a 133 MHZ Pentium (and beyond).

These programs will run on a plain MS-DOS computer. No
fancy graphics are required.

I'm the author of these programs, and Bruce, W1LUS maintains
the question pools for AutoExam.

9. Frankford RC "Team Antigua" to Operate V26B SSB During CQWW
10. Weekly Propagation Forecast
11. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expenses was
provided this week by a grant from the AREC Repeater Group, of West
Palm Beach, Florida, which carries "This Week in Amateur Radio" on
the WA4HXZ repeater on 146.67 MHz, and heard in West Palm Beach,
Fort Lauderdale, Jupiter, and the Bahamas. Satellite time and
uplink equipment have been provided by SKYVISION as a service to
the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

I will be operating Sat. 21 Oct 95 from the University of SC - Aiken (my employer) as part of "Science Education Enrichment Day" a presentation for mostly middle school students. Our exhibit will be ham radio. Most effort will center on 2M.

I will make a special effort to work /QRP starting on 20M then QSYing to 40M. I intend to do do this at 11AM EDT (1500Z) and 1PM (1700Z). If you need SC two-way QRP give a me a call. If we do connect and you want a QSL no SASE is needed.

I will be signing KE2WB/4

>at 12 VDC is about right), and discharge *that* across the cell.
>That way you can't have runaway currents *exploding* a cell.
>
>Gary

I prefer using a 200 microfarad cap with about 300 volts to burn out
nicad shorts. You get more energy into the battery with the high voltage
low current approach than with a low voltage cap.

Scares the BeJeezus out of my wife.

That's fine when you're dealing with a trained police officer who knows
that you're not speeding. I have some difficulty, though, with the idea of
unmanned photo radar that may get ME a ticket because someone in a larger
vehicle with a much bigger radar reflection behind was speeding.

>Ian.

A company here in Albuquerque developed a program for the DEA which
runs on a laptop PC, and which controls an ICOM R7000 or R7001
receiver to track celllular calls, as the caller(s) move from cell to
cell, and thus from channel to channel, and lets the feds monitor
the conversation. By extracting information from the control
channels, it can tell which cell(s) the callers are in.

I've also been told that they can also tell approximately *where* in
the cell(s) the caller(s) are, by comparing relative signal strengths
from adjacent cell towers.

Of course, since they can track the frequency, they can use
conventional dopplers to DF the callers, although I bet that is
quite a challenge, given the fairly weak signals from cell phones,
the fact that they may be moving, and that 800-900Mhz
frequencies reflect off *everything*, causing lots of
reflections.

: >Thanks,

: >Ms. Feasance

Be aware that many police radio systems, especially those in cities,
used "repeaters", as do amateurs, so that direction finding on some
transmissions will find the location of the repeater transmitter, not
of the person who is talking. In this case it is necessary to find
the frequency used by the originating tranmitter, and to be within
range of that transmitter to do direction finding on it.
Also the simpler forms of direction finding are slow, and require
that the transmitter being searched for be on the air for protracted
or repeated transmissions. Sophisticated DF equipment can do a very
quick job of getiing a fix. Good Luck and 73

Source record: 236557

Hello, The Michigan Technological University Radio Club is looking for some info on how to do a hardware reset on a RC-1000 repeater controller. Our problem is that our processer is not recognizing any of the "D" commands. The system is reading back all the dtmf digits using the readback function which tells me that the decoder is functioning properly. It will also accept the D7b and d7c programming codes properly but not any others. Perhaps this could be because the code that our manual says is supposed to come up D62 for the program code is not right?! If anyone has any answers I'd pay to hear them, otherwise I'll be forced to trash this controller. I've tried calling M.C.C. and they are out of business.
Thank You,
Rob Hall AA8LA

First of all, there's more than one difference between code and no-code licences than just knowledge of code: No-code licenses are for VHF/UHF operation. Maybe they're more interested in autopatches, etc.

Secondly, I'd hate to see exams driven on number of people licensed. That logic taken to an extreme is CB Radio -- no testing at all!

1062. IPS Daily Report - 21 October 95

Newsgroup: rec.radio.amateur.misc

Message-ID: <46bvqb$p4h@flare.syd.ips.oz.au>
Source record: 236559
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 OCTOBER AND FORECAST FOR 22 OCTOBER - 24 OCTOBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 81/22

GOES satellite data for 20 Oct
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: 7.5E+07 (normal)
X-ray background: A6.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Oct 23 Oct 24 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Oct: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled, apart from
active levels 12-15UT.

Estimated Indices : A K Observed A Index 20 Oct
Learmonth 12 2233 4321
Fredericksburg 10 23
Planetary 11 29

Observed Kp for 20 Oct: 2646 4432
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Oct 8 Quiet to unsettled
23 Oct 20 Unsettled to active
24 Oct 8 Quiet to unsettled
COMMENT: The M1 flare on 20 October is expected to result in
unsettled to active levels from late on 22 October. The >10 MeV
proton event that began at 20/0825UT reached a max of 63PFU at
20/1210UT and ended at 20/2350UT.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Oct normal fair-normal poor-fair
PCA Event : The event that began 20/0900UT ended late on
20 October.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Oct normal normal fair
23 Oct normal fair poor
24 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
21 Oct -13

Observed Australian Regional MUFs:
Darwin MUFs: 15-30% below predicted monthly values.
Townsville MUFs: near predicted monthly values.
Sydney MUFs: near predicted monthly values 05-14UT and
otherwise 10-20% below predicted monthly values.
Hobart MUFs: 15-30% below predicted monthly values until 08UT.
Occasional Sporadic E was observed at Sydney and Darwin.
Night-time Spread F was observed at Townsville and Hobart.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
22 Oct -5 10-20% below predicted monthly values during the
local day and near predicted monthly values
thereafter.
23 Oct 5 Near predicted monthly values
24 Oct 5 Near predicted monthly values

1063. Funny Story

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-21 00:00:00 UTC
From: cgreenha@magnus.acs.ohio-state.edu
Message-ID: <469er7$cha@charm.magnus.acs.ohio-state.edu>
Source record: 236560

The following is an actual letter sent to the address below. The original was typewritten, and all spelling and grammar has been carefully left intact, including errors. I thought this was pretty funny, and thought I'd share it with you guys. Respond if you like. Withg that said....enjoy.

To Mr. (name omitted)
District Manager for Alabama
Radio Shack
3300 N. Pace Blvd
Pensacola, FL. 32505

Dear Sire,

This letter is complain about the problems I have having with the ham radio model number 19-1101 I had got from your company Radio Shack. I had this shipped special to me from your store 1096 Eastdale Mall Montgomery Alabama. I was got this because I think that i would get transmitt furthur that I did with the TRC 217 40 channel walkie talkie.
The problem that had first was when I was going to hook this radio HTX-1000 to the antenna the conektor on the radio was wrong it wouldn't attach to my cable. I was able to hook it finally by making a small change in in the connektor. As soon as I tried to use it there was no sound coming at all. This happened for two days and I never did get to talk to anybody the whole two days. That day the cable company came knocking my door and said there was something causing problems at my house and disconnekted my radio from the cable line. you knew when i brought the Radio that I was going to use that for my antenne. You didn't tell me not to why not?
Next time I decided to put the HTX-1000 in my automobile I thought I would see how it worked their. I hooked it to my CB-antenna and at least I could hear people. But what happens now is no one wants to talk to me because they says you have to have a licencs to talk to them. Why? I dont have to have a licencs to talk on my CB. They'll talk to me there. Anyhow it dont matter much anymore because somebody done took the radio HTX-1000 from my automobile.
What I would like for you Radio Shack to do is refund my money because I don't have the radio anymore and its not my fault i dont and I think you should give me back my money. Also the cable company here says that I hurt something in there line and want to be paid fix it. It will cost $27482.98 to fix the equipment they say was damaged because you didnt tell me not to hook it to the cable. Please remit to me the check for $27758.53 for damages due. To save this matter from going to court the check must be in my hand by June first or I will turn

this over to my attorneys of law.

Thank you (name omitted)

: The Internet and Packet Radio networks are two SEPERATE networks that
: have two SEPERATE protocols. The only way the Internet is connected to
: the Packet Radio world is by a BBS that has ports for BOTH.

At least in the case of TCP/IP, the protocols are exactly the same, once
you rip off the AX.25 crud on the RF side. :-)

The fact that you need an interface between the two nets is no
different from the gateways required by many other type of wired networks
to communicate with the internet at large. In fact, it's usually
easier on the Amateur Radio side, because your gateway can be a few
hundred lines of C code, instead of hundreds or thousands of dollars
in electronics. :-)

>you.

Sorry, Fred, you are applying these rule sections improperly. They apply
to cases where a *radio receiver* receives interference from an amateur
transmitter *improperly* emitting signals on the intended frequency of
operation of the radio receiver. These rules do not apply *at all* to
equipment that is not intended to be a radio receiver, and do not apply
even in the case of receivers if the amateur transmitter isn't emitting
signals on the receiver's intended frequency of operation. The FCC has
been *very* clear on this topic. It is the responsibility of the party
with the *malfunctioning* equipment to solve the problem. That's the amateur
only in cases of spurious or harmonic emission. It is never the amateur
when the device receiving interference is *not intended to be a radio
receiver*. By definition, if it is acting as a radio receiver, it is
malfunctioning.

Amateurs bear no responsibility under Federal law to solve such problems.
And though offering to help is good neighbor relations, it can open you
up to a civil liability suit if the equipment you modify later malfunctions
(even for another reason). You may not lose the suit, but the expense is
already a loss. I won't repair a neighbor's malfunctioning equipment unless
they offer me a signed waiver of liability.

This is all clearly explained in the FCC RFI pamphlet.

>
>Scares the BeJeezus out of my wife.

I'm not surprised. You've substituted one hazard for another. Instead
of a battery explosion, you're now dealing with a potentially lethal
voltage on the end of a suicide cord. You can do it safely, *if you
know what you're doing*, but this isn't a trick for those not experienced
working around exposed high voltages. (One hand in the pocket, etc)
I agree it often works better, however.

I've shaken hands with Reddy Kilovolt quite often enough in my
career. My 9 lives are long since expended and I've become serious
about the safety rules.

>
>I find it easier to compare the numbers on my speedometer with those on
>the little signs on the side of the road. If they are pretty close, I
>smile at the officer as I drive by. :-)

The little signs say I-85 along the road I drive. So I keep the numbers
on the speedometer close to that, but for some reason the revenuers
tend to smile a lot when they see me. So to avoid making their day
and enriching the county coffers, I use ECM equipment. The revenuers
just frown and leave me alone when I cruise by them 20 MPH slower
than the sign says. As soon as the threat receiver becomes quiet,
I can resume normal travel speed.

The quaint notion that speed kills was debunked in the 1830s. Then
they believed a human couldn't breathe at speeds faster than 40 MPH,
but trains demonstrated that they could. The hazard is those sudden
stops, try to avoid them by paying attention to your driving.

Statistics say you're most likely to be in a fatal accident
within 10 miles of home and while travelling at less than 30 MPH.
It's hard to avoid driving within 10 miles of home, but you
can avoid travelling at less than 30 MPH. That way, statistics
are on your side. :-)

>If you want technical content, then go read an EE journal. The American
>amateur radio community is made up of *amateurs* not professionals
>(notice those words are antonyms!). The ARRL has to write a journal
>that will interest the baker, mechanic, corporate exec, MD, English
>high school teacher, and all the rest of us *amateur* electronics folks.
>They've done a darn good job for the last 80 or so years.

The dictionary doesn't say that amateur=incompetent bungler. It says
amateurs do things for the *love* of it while professionals do things
for pay. History is full of examples of amateurs being the leading
lights in their fields. Albert Einstein won his Nobel prize for something
he did as an amateur. His profession at the time was patent clerk.

Demeaning amateurs because they are willing to work without pay
is an insult to all those who have worked so hard and so long at
their chosen avocation. The sad fact is that professionals can't
afford to take risks in their designs because they can't afford
to fail very often if they wish to keep their jobs. Amateurs can
take daring new risks because it doesn't matter to their livelihood
if they fail often at their avocation. Thus their successes can be
all the more groundbreaking when they do happen.

Feeding amateurs pap in a magazine is demeaning to their intellect
and skill. Instead of the same tired old designs replowing the
same tired old ground, the magazines should be printing things
that stimulate the imagination and inspire amateurs to try new
ideas and new concepts. There's a place for restating the fundamentals
in an amateur magazine, of course, not everyone is working at the
same level. But what we see in magazines like QST is far too often
just pandering to the lowest common denominator. Its "technical"
articles are stodgy and conservative *cookbook* affairs designed
to be duplicated by simpletons (there's a place for those too, of
course, in the Handbook).

I've seen little that is novel or challenging in QST in years.
QEX was touted as the place for new cutting edge ideas, but
it too has been sorely disappointing. It has either addressed
trivial points in exhaustive and boring detail, or glossed over
the truly important ideas. _Ham Radio_ was a much better magazine,

and it's successor _Communications Quarterly_ started out with much promise (though it too of late has been disappointing). Even the zany _73 Magazine_ is willing to take risks and print novel ideas that make amateurs think and fires their imaginations. It has regular columns on RDF (Homing In), ATV, microwave (Above and Beyond), packet and computers, Hamsats, RTTY, QRP, etc. Those columns go beyond cookbook and present ideas for amateurs to develop. So what if some of the ideas presented turn out to be impractical on closer examination? At least they get amateurs thinking and experimenting, which may stimulate them to take off in other directions.

For a field that is so dependent on Maxwell's equations, when is the last time you've seen something more than I=E/R printed in an amateur magazine? As a mathematician, when is the last time you saw an integral sign in an amateur journal? Much of what is new and exciting in amateur radio is digital, and based on mathematical implementations, IE DSP, that deal with more than just I=E/R. Why aren't we seeing this? Sure, we get *reviews* of DSP hardware, simple audio filters mostly, but where are the articles showing us how to *develop* DSP algorithms? Why are we stuck in the two transistor CW transmitter paradigm in a day when advanced modulation forms are within our reach?

As amateurs, we each have a choice, we can work on the cutting edge or the trailing edge. Trailing edge technology and ideas are well represented in QST, but where are the cutting edge ideas? I know that QST depends on the membership for articles, but it's the editor's job to stimulate and energize the membership to produce articles of the type desired. To potential authors working on newer techniques, QST doesn't seem to be the place that would welcome their articles. This may be more perception than reality, but it's the editor's job to change that perception.

One way to do that is to create columns focused on newer techniques. Sure, there's a column touting ARRL's _Radio Designer_ product, but what about more capable tools like Spice, or more generically useful tools like Mathcad, or the antenna tools like NEC and the Smith Chart tools, or any of a number of CAD tools useful to the amateur? The columns aimed at stimulating operating activity seem to concentrate only on DX, such as the _World Above 50 MHz_. Where's the column promoting *other* activities above 50 MHz? I don't see a column on RDF, or ATV, or any of a number of other activities. There are columns titled _FM_ and _Packet Perspective_, but no offense to the authors, they are wimpy things that don't ignite the fire in the belly of the reader to get out there and do things.

Ah, well, as usual I've gone on far too long, and wandered off the original subject. Let me just summarize by saying amateurs don't *have* to be poor shadows of their professional counterparts. And

amateurs don't *have* to work at the trailing edge of technology.
Amateurs only do so because they don't think that they can do
better. It's the job of the magazines to exhort them to change
their thinking, to open and expand their minds, and to teach
them that newer techniques really are accessable by the amateur.

>I am looking for more range to receive and get out..

Well, for being in a hole, that's not too bad. Two things can
help, height and gain. Of the two, height is normally more
important. If you can get the antenna high enough to make
line of sight, then gain isn't important. But if you can't
go any higher, then high gain directional antennas can help.

It's not so much the extra signal strength the high gain
antenna gives you as it is the rejection of noise coming
from other directions that matters. This will improve the
received SNR and allow you to hear stations whose signals
are propagated to you via a scatter mode. Thus a beam is
of more benefit than a gain omni-vertical.

Of course a beam requires you to *point* it, thus adding
the complexity of a rotator system. But this is well worthwhile
for working those stations beyond your line of sight.

In article <462pj8$ivr@griffin.ccc.nottingham.ac.uk> Ian Roger Brothwell <ibx> writes:
>If the cellphone switches frequency according ot the base station to which it
>is working then you'd have problems - your triangulation equipment would also
>have to switch frequency. I suspect you'd have to be relativbely close to the
>cellphone (say, within a few miles) to have much success.
>Now, if several cellphones share the same frequency (some sort of multiplax
>method - I'm not sure of this) then you'd have to actually listen to the
>conversation to establish the cellphone that you are receiving.

A couple of notes on cellphones that may not be obvious. First, the
phone company always knows where a turned on cellphone is located,
at least to the closest cell. It has to know this in order to direct
incoming calls to the cellphone. So you don't have to be talking on
the cellphone to be located, it merely has to be powered up.

The way this works is that any time a cellphone is powered up it
looks for the control channel of the strongest cell it can hear
and transmits its phone number and serial number to the cell site.
This registers it with the phone company computers. It repeats this
process periodically as long as it is powered up (every X minutes),
and every time it finds itself located where a different cell is
stronger than the one with which it was previously registered.

This latter is important. If you don't mind breaking the law, and
screwing up the cellphone network, you can transmit a simulated
cell site control channel signal and force the phone to respond
with its number and serial number. This then gives you a ready
tracking beacon. This is most useful when you are already in the
same cell with the cellphone you are trying to locate. If you
are the phone company, or an authorized law enforcement agency,
then this technique isn't even illegal, nor, if you are sophisticated,
harmful to the cellular network.

For those with more pedestrian access, conventional RDFing can
be used when the phone is actively engaged in a call. Having a
cellular control channel receiver, and the proper decoding equipment,
makes the job lots easier though, if the phone is moving from cell
to cell.

The fact that a cellphone can be located when it is *not* making
a call can be used in a thriller, but to my knowledge hasn't been
as yet. This could be a nice "hook" for a story.

##########
Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show
can really work.

Also, be sure to check out our WWW Home Page. It has information on
upcoming shows,reviews of past shows, and even theme music. It is
updated courtesy of the Boston Amateur Radio Club. Access it at:

http://www.barc.org/barc/ham-more.html

Congratulations Woody,

I earned my ticket (No code) in May 1993 and I had to wait until August to get
it in the mail. By November 1993 I had upgraded to Technician Plus and by
May 1994 upgraded again to Advanced.

Enjoy the hobby! I hope to see you on the HF bands soon. Once you get a
taste of HF you'll work like mad to get to use it.

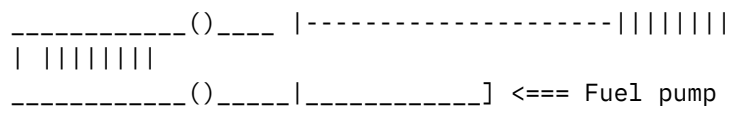
I have a cure for the fuel pump noise on Ford vehicles:

(1) Take two toroids (the mix doesn't make much difference) about 1" in diameter.

(2) Wind each with one layer of turns using #14 insulated wire.

(3) Incapsulate each toroid with shrink tubing bringing both ends of the coil out at apposite ends.

(4) There are two leads that go into the fuel pump, break each lead and attach each toroid in series.



This should cure your noise problem.

Bob Levine (levine@mc.com) wrote:
: Sorry, this is a bit off topic, but can anyone reccomend
: a portable GPS receiver or suggest important features to
: look for in them when shopping?

Bob, you might try the newsgroup for this....I think it's something
like sci.geo.satellite-nav.

I have a Garmin 40, and love it. It was inexpensive (I've seen about
$300), has an optional PC interface cable that connects to your laptop or
TNC for APRS use, and also has an optional car/boat/airplane external
antenna. The built in antenna works fine if you leave the unit on the dash.

What I like most is the tiny size, long battery life (20 hrs), movable
map which I can adjust from 0.2 miles to 320 miles range, and it's ease
of use.

It's watertight & floats if dropped off a boat.

The PC connection is really neat. I can watch the car track along on the
screen of my laptop. If only we had better digital maps to import into
the program ... (Hey everybody...big potential market untapped here !)

It allows about 32 waypoints , and beeps when I get 60 seconds from the
waypoint. It reads out speed up to 99 mph, and accuracy is within 49
feet. You can save all the tracking data, waypoints, etc., to the PC via
cable and reload them next time you take the same route.

I've seen reports in the nav newsgroup about the Garmin 40 not tracking
well under heavy tree canopy. I personally have not had this problem. In
general you will find Garmin, Magellan, and Eagle users to be very
satisfied. As in the PC vs Mac wars, each likes his own GPS best.

Of course, it's always hard to hear somebody else's baby is cuter than
your own.

Good luck,
Reddy Biggs

VV>and questions "the system", it's a bit uncomfortable, isn't it?
VV>
VV>-Drew in Charlotte-
VV> KF4DDM
VV>

Yes, I guess it really does bother me Drew, but not for the reason you state.

First, there is no party line such as you portray above. There may well be some misguided INDIVIDUALS who might fit your picture, but if you would abandon your "in-your-face" attitude you would find over 99% of us willing (even eager) to welcome you, learn from you, and just maybe show you a few technical tricks we've learned along the way too.

Above all else, our hobby is characterized by altruism and a tendency to go out of our way to make newcomers welcome. Think, just for a moment, about the fact that all of the training and testing which provides the path into the hobby is done by people WHO ARE ALREADY IN THE HOBBY. Nobody cares what other radio service you may have been in before, nor do we judge operators in the GMRS, CB, or whatever.

The question has crossed my mind several times, here and on other online services, as to why you became licensed if the amateur service is filled with such unlikeable characters as you seem to portray all of us to be.

1096. ICOM 2410 servicing

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-22 00:00:00 UTC
From: georgie@aztec.asu.edu
Message-ID: <46dl6b$lba@news.asu.edu>
Source record: 236580

I have my ICOM 2410 apart planning to replace the power gating
transistor Q43. If anyone has done this before I would appreciate
some advice on desoldering the VHF and UHF main boards. Q43 is
between them and how to get them apart is not very obvious.
Thanks. George

1097. Re: RF Spectrum Posters

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-22 00:00:00 UTC
From: "Edwin J. Bailen" <n5kzw@eden.com>
Message-ID: <Pine.BSD/.3.91.951022130438.17446A-100000@matrix.eden.com>
Source record: 236581

Omega had a postcard in their catalogs of several years ago that offered
a free spectrum poster. The poster is 44' x 34", and covers 3kHz thru
300 GHz in 8 bands. It is identical to that offered by the Government
Printing Office except for some Omega advertising in the lower right corner.

I don't have the GPO information, but Omega can be reached at
1-800-TC-OMEGA. Standard disclaimers apply.

Ed Bailen -- N5KZW
Information Systems should be tools, not excuses.

On 20 Oct 1995, Steve Atkinson wrote:

1098. Help With MFJ 1224 RTTY/CW Interface.

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-22 00:00:00 UTC
From: bcrier@online.dct.com
Message-ID: <46dm4t$3t6@online.dct.com>
Source record: 236582

I have a problem with my MFJ 1224 I need the cable or pin out for the cable that goes from the computer to the interface. I have one of the manuals but that only tells me how to hook it up to the radio. Also witch software is the best for this interface. If you have any info. for me PLEASE Email me the info.

Thank You,

Brent AA9OO
bcrier@online.dct.com

1099. Help With MFJ 1224 RTTY /CW interfcae

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-22 00:00:00 UTC
From: bcrier@online.dct.com
Message-ID: <46dmvt$504@online.dct.com>
Source record: 236583

I have a MFJ 1224 And I can't get it to work. I need the cable or
pin out for it. The one that goes from the computer to the interface
if you can help me PLEASE E-Mail me a message with the info.
Also I need some software to run it.

Thank You.
Brent AA9OO

1102. 17.5 cents/min interstate calling card

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-22 00:00:00 UTC
From: tmoylan@crl.com
Message-ID: <46e7nk$m60@crl12.crl.com>
Source record: 236586

DISCOUNT Calling Card ... pay only 17.5 cents a minute!
(state-to-state) NO SURCHARGE

If you're usng an AT&T, MCI or Sprint calling card away from home,
you are paying far too much. The Discount Calling Card offers a rate
that is possibly the lowest in the country ... and it's FREE !

With The Discount Calling Card you can save up to 71% over the
other cards on the market. WHY? Because The Discount Calling Card
does not add a surcharge, whereas AT&T and all the others add up to
$0.85 per call right onto the first minute. (Did you know that?)
Also, our rates per minute are much, much lower.

~~~~~~
Email to: tmoylan@crl.com for more info (including comparative rates)
or a printed catalog (if you include your snail address)

.....or better

http://www.harborside.com/tcenter/callcard/
for a full Web site of information
including a link to a MONEY Magazine article
that praises this offer
~~~~~~

Rates Apply anywhere in the Country. Anytime ..... night or day.
Just think of it, every time you use your Discount Calling Card you
can be sure of paying the least amount for your phone call. Many of
our customers save an average of $250 per year. And you can use this
card anywhere -- any phone, payphone or hotel phone. There is no need
to change your home long distance carrier ... The Discount Calling Card is a
stand-alone card.

There are no monthly minimums, billing fees or hidden costs and the
17.5 cent flat rate (state-to-state) applies anytime, anywhere -- even in
Alaska, Hawaii, Puerto Rico and the US Virgin Islands. You can use this
fantastic card at payphones and hotel rooms using one convenient 800
number.

Services for The Discount Calling Card are provided by The American
Travel Net through LDDS, the 4th largest long distance company in
the United States. We have teamed up with them to provide you
with this incredibly low rate.

1103. JOTA experiences this weekend

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-23 00:00:00 UTC
From: "Ronald D. Doyle" <Ronald.Doyle@DaytonOH.NCR.COM>
Message-ID: <DGwK4y.2Dr@ranger.daytonoh.attgis.com>
Source record: 236437

Hi, name here is Ron and I am in Dayton OH. I helped out with
JOTA this weekend and most things went pretty well outside of
the standard organization problems. We had about 300 scouts go
through the shack we set up. I think all the boys had fun and
were impressed.

There was one problem and I wanted to express some concern.
Probably everyone on this list has encountered it. I was on 80m
using the standard JOTA calling freq. of 3940. For the biggest
part of the evening hours there were several kilowatt stations
on 3941 and 3938 that pretty well made 3940 useless. After
listening for awhile I heard them make comments about the qrm
created by JOTA and having to boost there power to get over it.
I guess I am disappointed that they didn't move up or down a few
KHz and let us use the calling freq. to make our contacts. Part
of the reason for JOTA is to introduce our hobby to promote our
hobby. Scouts worldwide were introduced to our hobby this
weekend and it's just seems a shame to have a few hams who think
they "own" a frequency to spoil the event for some excited young scout.

If you happen to know someone that is like I would ask that you
try to get them involved with promoting our wonderful hobby.

Again, Thanks to all who read this.

From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <46f2vg$l4d$1@mhafn.production.compuserve.com>
Source record: 236502

>When a Ham Radio Operator completes his final
>QSO and passes on to his eternal reward, what
>happens to his or her callsign?

Currently it simply goes inactive and is not
reissued.

With the advent of "vanity" calls, it will be
"blocked out" for two years, except that a
properly licensed close relative can obtain
it sooner. Also, it can be issued to a club
which had the deceased ham as a member (with
permission of the family) before two years.

After two years it is "fair game" for anyone
with the proper license class who wants it.

1107. DX on FM 6 meters?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-23 00:00:00 UTC
From: hmaxwell@netcom.com
Message-ID: <hmaxwellDGvz5A.E9s@netcom.com>
Source record: 236503

A fundamental question, I know-- can anyone tell me the prospects for sporadic 6 meter contacts with an FM rig as opposed to SSB?

I'm at sea level and anticipate using a beam antenna, but not a whole lot of wattage (like 10).

Thanks a lot!

Of course I am not perfect I only appear to be so due to the company
I keep in the world of ham radio. When I go out into the real world of real
men I of course look far less perfect.

Among people with a life I am boring, among hams I APPEAR to be interesting.

>
>Waste your time talking to Americans?
>A real patriot you are.

Burt, you yourself said the "Amateur's Code" is invalid; therefore, hams are not and do not have to be patriotic. Plus, I think a person has a right to call anyone they want, even exclusively DX stations if they want. After all, if calling CQDX is wrong, then wouldn't calling a particular station be wrong? Wouldn't that be discriminating against everyone in the world except that one station? We can't stand for that, can we?

>wife to use. Does anyone have experience using them? Also, does anyone
>know the mods for expansion of the 2m band to inlcude marine VHF for
>emergency purposes?

Two things. First, this HT is a "mini". It has a mini antenna, a mini
battery, and a mini speaker. That means you're going to get mini range
and/or mini transmit time, and the speaker fidelity will probably be mini.
That's OK for your wife if she needs something to call for help with if the
car conks out in town, but don't plan on yacking for an hour on the local
repeater with it, unless you plug into an external power source. And
if you stray very far from the repeater, you'll need to plug into an
external antenna, like a mag mount. And if you drive with the windows
open, you need an external speaker.

Second, do you mean using the HT to transmit on marine band? If I remember
correctly, marine radios, like CBs, must be type-accepted for marine
transmission. Most HTs are able to receive out of band, but transmitting
out of band is usually reserved for MARS and Civil Air Patrol members.
Depending on the mode and frequency, you may be able to monitor marine
transmissions. Maybe someone else can clarify this. Even if you could
transmit out of band, you would realisticly (excuse me) need more power
(like 25 watts) and a big whip antenna on the boat.

>
>At $285 it seems like quite a good deal.

That HT lists at $345, so the price sounds OK. You might want to shop
around. Try R&L.

>
>Thanks for any info, here or by e-mail to gclyde@well.com.

Hope this helps.

>
>You call me a fool and your name is Fritz o matic?

Answers to questions :
part 1 - No
I don't believe that I personally called Burt a fool, I was merely
stating my idea of how many users of this newsgroup appear to view
him. Personally I like the "little man behind the curtain" analogy
(see L. Frank Baum's 'Wizard of Oz') that was posted some time back.
part 2 - No
Fritz-o-matic is not my name, it is a nickname that I have had for
many years, longer than the 20 years I have been a ham. I am not
certain if Burt was implying that I am a fool because of my nickname.
If one's nickname makes them a fool and not their words and actions
perhaps I should change my nickname to "Burt Fisher"

>MOST HAMS view me as a fool, that is a compliment.

I do not consider Burt a fool, I consider him an individual who seems
to post a great many foolish posts. Burt is probably well-respected in
his local community (educator, family man ...) and quite possibly a
nice person to know once one gets past the bluster (see above
analogy).

I do have a question though. I wonder why Burt lowers himself to
remain an active (?) ham if the amateur community consists such poor
quality people?

1117. Re: DX on FM 6 meters?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-23 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <46g7kr$h6n@omnifest.uwm.edu>
Source record: 236513

In my (limited) experience, you're somewhat more likely to work 6m DX on SSB (or, during especially massive openings, on CW) than you are on FM, what with the capture effect and all. If you're really interested in 6, I'd recommend shelling out $14 for a postpaid copy of "Six Meters: A Guide to the Magic Band" by Ken Neubeck WB2AMU. It was published a few years ago by Worldradio magazine, Box 189490, Sacramento CA 95818. Phone (800) 366-9192. (CA residents should include 93 cents sales tax.) That book is a very good introduction to six meters.

Remember, for FM work you'll need a vertically-polarized antenna, and the other modes use horizontal polarization.

Many thanks who helped our Explorer Post out by talking with visiting scouts under the club call W9CEQ. Our JOTA was a little short of visitors due to the rain, sleet and snow on Saturday (Our station was OUTSIDE on Saturday), but we were not short of enthusiasm in the post.

We operated 10,15,20,40,80 and even 160 for a short time on HF. We also operated 2m and Packet. The scouts and leaders that did show were impressed, (except for the actions of a gentleman on 40 that stayed on 7.290 AM for 5 hours and if nothing else rag chewed about us ANTI-AMers using the AM DX window on 40. He was very beligerant and quite insulting.) His name will not be mentioned, but I am sure there are others who had the same problems we did with him. We explained to our visitors that he was an exception and not the rule for almost every other ham.

Thank you for helping us to the members participating in the Texas QSO party even though you had other business at hand. The true spirit of HAM radio was demonstrated there.
Greatfully,
73 Mike KB9KFE

An amateur radio friend of mine wants to buy a Magellan Meridian and has asked to have have this notice posted. He would be grateful ful answers to the following 2 questions:

1. Does the unit have computer interface capabilities, and if so what kind of cable is reuired.

2. Does anyone know of any instances where it is being used for APRS?

Thanks in advance.

There is a company that makes a radar detector detector. It is tuned to
the most common LO, about 11.5(my bell and uniden both sweep from about
10.8GHz to 11.7GHz). I think the company is based in Canada where radar
detectors are a BIG NO NO. They showed the Cnanadians at work on CNN
around 2 yrears ago. They pulled over a big caddy and ripped out the
dash to get at an installed detector.
My uniden gives me falses off of most other radar detectors in the Ka
band. Radio Shack detectors are especially bad. They light up my Bell
over 1/2 mile away. They light up the uniden beyond line of site.
If you want I have the name of the comapacy that makes that sniffer.
Pop Science or machanics ran an artical on them and gave some technical
specs. Unidec claims that my LDR 2500?(I do not remember the mod number
for sure) has a very low "leakage" oscillator. I compared the uniden
several Bell and a few others with our Tektronix 2754 spectrum analyzer.
The uniden is much, much "quiter" than any of the others that I checked.
Several of the radio Shacks radiate more than our in house ir/microwave
intrusion detector(different freq to be sure ir/mircrowave=10.525GHz)
I hope this helps
A freind just mentioned that he was harrased by a cop one night because
the police officer saw his unit light up. That must be why the uniden
has both a dim and led off mode.

Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local station to air the show by calling the program director asking them to air the show. Faxes help, too. Again,there is NO CHARGE for the station to air the show, so a lot of calls asking for the show can really work.

Also, be sure to check out our WWW Home Page. It has information on upcoming shows,reviews of past shows, and even theme music. It is updated courtesy of the Boston Amateur Radio Club. Access it at: http://www.barc.org/barc/ham-more.html

It seems I've lost the orginal thread on this, but I will continue
to search for it anyway.

He in NSW.AUS we also have radar detector detectors. I was caught
by one in QLD, so I assume that they use a similar settup there
as they do here.
The conditions were as such:
I was traveling along a highway in a group of five cars, I was
second last. I had the radar detector on (which I'd just turned on
5 minutes earlier out of curiosity) when an unmarked highway patrol
car came over a small rise. The group of cars (and myself) weren't
speeding but the police pulled over to the side of the road as the
group went past. NOT A PEEP FROM THE RADAR DETECTOR, which I thought
was extreemly unusal ? These boys had fat chance of catching anybody
for speeding I thought, or my detector is faulty. The police turned
around and picked me out without any doubt that I had a detector.

Since then I've done a lot of research into 'their' illegal activity.
(in relation to the federal radcom act)
At first I thought that the r-d-d was part of their radar since it
the only (microwave) antenna on the car.
In later investigations I discovered that these devices are actually
radar detectors themselves. They have their LO's and IF adjusted to
do the job. I even found the company that did these mods and sold
them to the local PD. After talking to them, I also found out that
also offer COUNTERMEASURED DECTECTORS to 'keep the bastards honest' !
Their best customers of course are police officers ! hahaha

There are as many counter measure modifications as there are RD's

Has anybody been caught with a stripline RD ???

- Cya de Trash VK2XSO

There are two types of Police officers in this state.
Corrupt ones, and those ICAC hasn't caught yet.

Hello Gang,

I collect and restore old keys and bugs.
I've got some restorations going and need a few parts to finish up.

1. Bunnell Gold Bug -- need the circuit closing lever and mounting hardware.
2. Signal Electric Semantic -- need the pendulum stop post.
3. Electro Bug -- need weights.
4. Levinson Radio "Like-A-Flash" -- need finger pieces, binding posts.

Would buy parts off your junkers or buy your junkers for the parts.
What do you have ?

>invitation.

True... you make a very good point. But then, people will find a way around calling CQ- they'll coin a new term that doesn't mean the same as a general CQ... and people will also make the argument that calling CQDX is not the same as a general CQ.

However, your argument makes sense.

Have a nice day.

published every week and is made available for unlimited free distribution.

* OSCAR-11 REPORT *
==================
As of Wednesday 18 October 1995 at 06:11 UTC, telemetry was nominal, and
WOD was dated 16th October. Bulletin $BID UO11.029 dated 6th October was
being broadcast.

The current diary schedule is as follows:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted.
It is possible that the long period of ASCII status transmissions will be
replaced by binary TLM and WOD.

A new WOD survey of channels 1, 2, 3, 61 (magnetometers) is usually started
when the weekly bulletin is loaded, or when other ground control activity
occurs.

OSCAR-11 can be heard on 145.826 MHz. Modulation is 1200 baud AFSK with
tones of 1200/2400 Hz. There have been many designs for suitable decoders,
but perhaps the simplest way is to use an old telephone modem, using Bell

202, or V23 tones. It is essential to invert the modem's output signal before feeding it into the computer. For ASCII, the serial port should be set to 1200 E,7,1.

The satellite also has an S-Band beacon that transmits a continous carrier on 2401.5 MHz.

Schools can now send their Amateur Satellite News to Richard Limebear, G3RWL, via the Internet (g3rwl@amsat.org) for inclusion in the ASCII new broadcasts made by OSCAR-11.

[Info via Clive Wallis, G3CWV]

* GALILEO NEWS *
==========
Engineering data returned from NASA's Jupiter-bound Galileo spacecraft on 11-Oct-95 indicates a problem with the spacecraft's tape recorder, project officials report.

Project officials say a week or more may be required for the problem to be isolated or well-understood, but that the spacecraft remains otherwise healthy and in contact with controllers on Earth.

The problem was detected shortly after Galileo took an image of Jupiter and its major moons from 22 million miles away. After taking the three images required for a color photograph to be produced, the tape recorder used to store the data was commanded to rewind. Data received from Galileo suggest the tape recorder did not stop as expected after rewinding.

"Galileo engineers have commanded the tape recorder to a standby mode while they investigate further," said Galileo Project Manager William J. O'Neil of NASA's Jet Propulsion Laboratory (JPL), Pasadena, CA. Project engineers are proceeding slowly and cautiously to understand the problem, according to O'Neil, and are avoiding sending unnecessary commands to the spacecraft. In addition to analyzing spacecraft telemetry, engineers are working with an identical tape recorder in a laboratory spacecraft mockup on the ground.

"The next scheduled spacecraft operation that we need to perform is a routine thruster flushing in about two weeks," said O'Neil. "We want to take the time in the interim to understand this problem in detail."

[Info via NASA]

* MIR CREW USING NEW AMATEUR RADIO COMMUNICATIONS *
==========
German Cosmonaut Thomas Reiter (amateur radio callsign DP0MIR) and his two Russian crew members (R0MIR) have installed a new 70 cm band transceiver aboard their Mir space station.

Uplink Downlink

Main 70 cm frequencies are: 435.725 MHz 437.925 MHz (Voice)

435.775 MHz 437.975 MHz (Packet)

2 meter frequencies are: 145.200 MHz 145.800 MHz

145.550 MHz 145.550 MHz

There has been no 9600 baud packet radio activity yet since the high speed
TNC will not arrive at MIR space station until the end of the year. ESA
plans to extend the EUROMIR 95 mission an additional 44 days.

The following is a QST

Problems in the land of repeater coordination. The state of
Indiana and the Southeastern Repeater Association say NO to an
ARRL SPOC. Also the FCC liberalizes high frequency digital rules
once again and ham radio saves a shooting victim's life.
These stories and more on Newsline Report number 949 coming
your way right now!

(*****
THE TROUBLE WITH SINGLE POINT OF CONTACT

Controversy is growing following the October 7th repeater
coordinator's meeting in St. Louis. While coordinators voted
overwhelmingly to let the American Radio Relay League serve as
a Single Point of Contact between coordinators and the FCC at
least one coordination council is claiming that the ARRL lied
about its role in planning the meeting. And another large

umbrella coordinating group says that it won't be part of the contact plan.

Just who ordered the October 7th meeting? That question is the center of controversy. For over a year, FCC officials privately have wanted the meeting to take place. For the Commission, having a single point of contact between the FCC and coordinating groups is appealing. It holds the promise of possibly making dealing with the nation's various coordinating groups easier. But the Indiana Repeater Council sez the ARRL lied to amateurs. Those charges follow a response to a question posed to FCC official Ralph Haller, N4RH, at the conference. Haller was asked about the FCC's role in forming a single point of contact:

"Did the FCC, yes or no, request a single point of contact from the coordination community?"
"No, OUT we did not request it. But it is an option that is on the table. I think there are frankly some advantages to it. But there are probably disadvantages to it as well. It is a model we use in other services. If it doesn't fit in the amateur service, so be it. But was there an official request from the FCC that there be a single point of contact? The answer is no. There has not been any official request of that." Haller

Bill Wells, WA8HSU, is Chairman of the Indiana group. He sez League officials stated several times that it was the FCC pushing for establishment of a single point of contact. Wells sez it was actually the League demanding that the Commission request a single point of contact. Wells describes the meeting as illegitimate from start to finish. Opponents of the ARRL say the League conjured up the need for a single point of contact from the start. They feel the League's interest is politically and economically based. Critics of the meeting say the outcome was predetermined and did not follow basic parliamentary rules of order. From other comments the FCC's Ralph Haller made during the meeting, it's obvious that Commission officials were interested in the event's outcome.

"The model in this case, is that is used in private frequency, private land mobile frequency coordination. There it was determined there should be a single point of contact nationwide. Even though the coordination may well be done locally. For example PASCO, the Police And Safety COordinators does all the□ coordination through local coordinators. But they provide to the FCC and to the other coordinators a single point of contact in Florida. And that is all that is suggested here." Haller

The FCC is interested in copying what's being done in England. There, repeater operation is administered by the national amateur radio society instead of the government agency that regulates telecommunications. In the past, the ARRL has told the FCC it had no interest in being the nation's repeater coordinator. League

officials agreed, 'though to meet with Commission representatives to discuss the issue.
The single point of contact idea won't have the support of another coordinating group. SERA, the Southeastern Repeater Association sez it will not participate in the single point setup. David Shiplett, AC4MU, is President of SERA. He sez it's in SERA's best interests to maintain its own contacts with the FCC, as the Association has done in the past. Also being raised is the question of possible influence by any given League Division Director on specific coordination matters affecting the Director's region.
SERA is a major voice in amateur radio. The Association represents more than 2,000 repeaters in eight southeastern states. Shiplett sez that just as there can be more than one VEC program. The option should also exist to have more than one point of contact for handling coordination matters.

So, what does it mean to have groups like the Indiana Repeater Council and SERA not taking part in the single point of contact? They will essentially take the role of outsiders looking in, and won't be part of shaping how the single point of contact is run. Since most of the rest of the nation's coordinators are agreeable to the single point plan, both groups could find themselves having to deal with the League's single point system nonetheless if they try to bring a repeater problem directly to the FCC. And that ultimately could affect coordination issues affecting your area.

(*****
EMERGENCY USVI REPEATER

And speaking about repeaters, hams in the US Virgin Islands have an additional repeater on the air following Hurricane Marilyn, thanks to the ARRL.
When Marilyn hit the islands on September 16th, some local repeaters were put out of commission. ARRL USVI Section Manager Ron Hall, KP2N, said that a temporary repeater and a few 2 meter quarter-wave antennas would help the radio amateurs in St. Thomas to provide disaster relief communication until they can get all their repeaters repaired and operational again.
The league obtained a complete 2 meter repeater and shipped it to Hall, along with antennas. The repeater is in use on 146.81 mhz.
The equipment will eventually be returned to ARRL headquarters where it will be added to several two meter handheld radios kept at the ready for emergencies. These latter radios were last used by amateurs who helped the American Red Cross after Hurricane Iniki hit the Hawaiian Islands in September 1992. Before that, some of the equipment was used in Puerto Rico after Hurricane Hugo in 1989.

(*****
HAM RADIO SAVES SHOOTING VICTIM

Amateur radio is credited with saving the life of a shooting victim. On Monday, September 25th, 40 year old Rory Clark, KD6RKL, of Citrus Heights, California was shot while standing at a bank automatic teller machine. Using his handheld transceiver, he called for help on a local repeater. The repeater owner and operator, Chris Huber, N6ICW, was listening and autopatched Clark directly to the areas 911 emergency response system. Huber then helped Clark in passing information to the "911" operator about his location, condition, and suspects. This assistance, and the ability to contact another ham immediately saved Clark's life.
The story was covered by all three television network affiliate□ stations. Their stories not only focused on the crime, but also on Clark's ability to call for help with his handheld.
Since then police have arrested two people in connection with the case. Rory Clark is back home and recovering and local hams in his area have set up a fund to assist Rory with his medical and living expenses. If you want to help a deserving ham in time of need you can send your donation to the Rory Clark Donation Fund, in care of the Sanwa Bank, 601 J Street, Sacramento, California 95814. Meanwhile please join with us in wishing Rory Clark, KE6RKL a complete and speedy recovery.

(*****
DIGITAL RULES CLARIFICATION

The FCC, responding to a request from the ARRL, has clarified its rules regarding amateur radio stations' use of digital codes. This as the result of a letter to the commission from the ARRL which said that some amateurs had expressed concern about the propriety of using the Clover, G-TOR, and PACTOR codes on bands below 30 mhz, because FCC rule 97.309, subpart A appeared to authorize only BAUDOT, AMTOR, and ASCII codes. The league told the commission that it had worked with the developers of CLOVER, G-TOR, and PACTOR to document the technical characteristics of those codes, and asked the FCC to remove any doubt about their legality on the High Frequency bands.
The FCC agreed, saying that the use of the three modes does not conflict with its objective of preventing the use of codes or ciphers intended to obscure the meaning of the communication. As a result the rule has been amended to include these modes.

(*****
NORWAY BEACON

LA6LU reports that he has added two meter and 70 centimeter beacons to his Norwegian operation. Geir Laasted says as of midnight UTC on September 5th his two new beacons are on the air.

LA4VHF is running 380 watts out on 144.890 MHz while
LA7UHF is on 432.830 MHz with 200 watts into an 8 element yagi
pointing due north.
LA6LU says he is very interested in reports. Please send
reports via bureau or direct to his Callbook address.

(*****
GRANT AWARDED

Dewayne Hendricks, WA8DZP, of Fremont, California has been
awarded a $400,000 National Science Foundation grant to study the
use of wireless communication in urban and rural schools in the
state of Colorado. The study will seek to determine the
usability limits imposed by issues surrounding radio data
transfer as related to an educational environment. The end
result of this research project is to will produce a widely
needed objective analysis of wireless as a general connectivity
solution for public education beyond highly controlled, costly,
commercial-service or limited environments. There currently is no□
such source of this data.
Hendricks is a member of the Future Systems Committee of the
ARRL. One of the other members of the team is Bob Buass, K6KGS,
from Southern California, the holder of the U.S. National
Amateur Radio Spread Spectrum STA from the FCC.

(*****
RS-15 NEWS

According to Pat Gowan, G3IOR the Russian Radiosport RS-15 ham□
satellite is suffering from severe power supply problems at this
time, as it now goes off almost immediately upon entering earth
eclipse, not to return until is 'sees' sunlight again. Using
GM4IHJ's SATSUN program, G3IOR calculates that the satellite is
currently suffering from some 28 minutes of zero battery charge
per orbit, a whole orbit charge efficiency of only some 78%,
which is insufficient to maintain either beacon or transponder
operation from the obviously limited battery capacity. While
G4CUO and G4ZHG fear terminal loss of the functional system,
G3IOR optimistically believes that it will again return back to
normal operation when the period of solar illumination
increases soon.

SC - RIP

Smith Corona Corporation, the last major American typewriter
manufacturer, filed for bankruptcy protection July 5th. The
company says that the rise of personal computers had sent sales
of typewriters plunging.

(*****
NEWSREADERS NEEDED BY GB2RS

Two metre and 70 centimetre FM newsreaders are required urgently for GB2RS in the Cambridge - Mid-Anglia region. And a reserve newsreader is needed to cover for the GB2RS 80 meter broadcast by G5VO in the East Yorkshire area. If you live in that part of Great Britain and would like to volunteer for either position, please contact Ian Kyle, GI8AYZ, as soon as possible.

(*****
YOUNG WELSH HAM HONORED

The Radio Society of Great Britain's 1995 Young Amateur of the Year is 16 year old Leroy Kirby, GW0ULC, of Cardigan, Dyfed, Wales. On September 10 he received a check for 300 pounds from Britain's Radiocommunications Agency. The United Kingdoms FCC. He also was given a Sony general coverage receiver and several other prizes.
Leroy has participated in Amateur Radio through both the Scouts and the Air Training Corps. The RSGB says that Leroy is actively involved with his local amateur radio emergency services and has managed to reactivate his local YMCA Amateur Radio Club. His main interest is packet radio and he has helped set up a new local bulletin board system.
Runner up is 15-year old Charles Banner, G7UBY/2E1CHY, of Birmingham who has been involved in teaching Novice licensing classes.

(*****
ILLINOIS JOTA '95

The Fox River Radio League and The West Aurora Radio League,☐ along with Amateur Radio Explorer Post #272, will be running a Jamboree On The Air '95, which will teach kid hams in the Northern Illinois region about ham radio, and contesting. We will hopefully run around 3A, or above, and some stations like N9YXA,☐ that's me!, will be running the whole weekend nonstop, all day, all night just operating, and having fun. So, If you are in the Northern Illinois Area, or want to hear us, send email to N9YXA@aol.com or, FCWD43B.prodigy.com QSL's will be sent.

(*****
DX

In DX, 9K2HN in Kuwait is activate with a new prefix from Kuwait using the callsign 9K0A. Be looking for him in the CQ WW SSB Contest and in upcoming special events. Depending on the propagation, he is active on 20, 17, 15, 12 and 10 meters. QSL via 9K2HN by the bureau or direct to Hamad J. Al-Nusif, P.O. Box 29174, 13152, Safat, Kuwait.
Also YI1BGD in Iraq was heard on 18.125 MHz around 15:00 hours UTC. And YI1RS has been heard on 14.212 MHz around 15:45 UTC. Finally, YI1FC was heard on the Brazil DX Net weekdays 09:00-10:00Z 14.240 MHz. Adel states to QSL to his old callsign YI1AFC.

(*****
PHOENIX ARC 2M CHALLENGE

Also, Irelands' Phoenix Amateur Radio Club has announced details of an Autumn Challenge for low power stations on 2 meters, using CW or SSB. The Challenge will run for the calendar month of October, and the scoring system is simple: one point per QSO on SSB and two points per QSO on CW.

(*****
LAPD

A well known ham is the executive producer of one of the hottest new shows on television. Dave Bell, W6AQ, is the senior producer of L.A.P.D., the new reality-based program that depicts the day to day work of members of the Los Angeles Police Department.
In the vein of the highly successful series Cops, Dave's camera crews also ride along with real officers patrolling the streets of the nation's second largest city. But as W6AQ tells Newsline that's where the similarity between the two shows end.

"Cops is generally what police call patrol. Which is just out in the cars chasing the bad guys. And L.A.P.D., while it does a lot of that. Also follows detectives and it follows forensics. And it does the bomb squad, S.W.A.T and K-9 and mounted unit, helicopters and all the rest of it. In fact, what it is going to be doing is, it is going to be covering every aspect of police work that is done anywhere. Because every aspect of police work that is done anywhere is done in Los Angeles." Bell

Dave Bell, W6AQ, is an avid CW DXer who said in a recent interview that he views himself as a documentary film maker. Some of his TV credits include the very popular "Unsolved Mysteries" and "Nadia", a film about gymnast Nadia Comaneci. In the late 1960's and during the 1970's he produced a number of highly acclaimed ham radio promotional films including the Hams Wide World, Moving up to Amateur Radio and the award winning The World of Amateur Radio.
Dave says that he and his producers are working closely with the Los Angeles Police Department to insure the accuracy of L.A.P.D. He also admits that hams who sit through to the very end of the credits may notice a kind of ham radio connection to the show:

"It's produced by a company called QRZ Media, Inc. QRZ in this particular case means is anybody out there watching." Bell

Which leads to a strange idea on our part. If you happen to be one of those people who watch L.A.P.D. why not let Dave Bell know about it. Consider dropping him a QSL card. Again his call is W6AQ and you can send your card to his callbook address.

(*****
NEWSLINE LISTENER SURVEY

A reminder of the Newsline bulletin stations during the month of October. Handling the survey is Dale Cary, WD0AKO. If you are a regular Newsline listener, please take a moment to jot down on a post card or QSL card:

1) Your name and address.

2) The callsign of the repeater or bulletin station

issuing Newsline in your area.

3) Its frequency or frequency pair.

4) The day of the week and time of day that Newsline gets

played.

Then mail your report to:

Dale Cary, WD0AKO
1310 34th Avenue South, suite 103
Moorhead, Minnesota
56560-5162

Or you can e-mail your report to Dale via the Internet to:

wd0ako@rrnet.com

We will run the survey through the end of October. If all goes as we hope, by Christmas we will post a complete list of stations airing Newsline to our various sites on the Internet and to our home page on the World Wide Web.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

For now, with Bill Pasternak, WA6ITF at our editors desk and Dale Cary, WD0AKO at the survey desk, we say 73 and we thank you for reading Newsline.

Observed Australian Regional MUFs:
Darwin: 15-30% below predicted monthly values during local day.
Townsville: 15-30% above predicted monthly values.
Sydney and Hobart: near predicted monthly values.
Occasional sporadic E layer was observed at all sites.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
24 Oct 10 Near predicted monthly values
25 Oct 10 Near predicted monthly values
26 Oct 10 Near predicted monthly values
COMMENT: A solar eclipse will occur on 24 Oct that may result in
anomalous absorption and propagation on HF paths to SE Asia during
the local day.

1140. Help me find my great-grandfather's callsign

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-23 00:00:00 UTC
From: calhoun@gorge.net
Message-ID: <calhoun-2210952123480001@wsdial4.gorge.net>
Source record: 236536

My great-grandfather became interested in ham radio in the late 60's or perhaps the early 70's (I'm working on it). Nobody in the family seems to remember if he actually got a license. If he did I would like to request his callsign. How can I find out if he had one?
dave

ps. please post to my email address as well as to the group. My newsgroup provider does not keep messages for long.

Hams are NOT stupid. I never said or inferred that.
Further no ham would do anything with a virgin much less burn one.
Hamming is not evil, just boring as hell.

From the latest QST, page 58, footnote 3:

Pro Distributors, 2811-B 74th St., Lubbock, TX 79423
(800) 658-2027

TCE Labs, 2365 Waterfront Park Dr., Canyon Lake, TX 78133
(210) 899-4575

Both have money-back guarantees.

I speak for neither, but advise you to read the article in Nov. 1995
QST, page 54-58.

I realize I missed the preceding parts of this posting and I am only replying to this posting in particular. But if you find it so boring, why bother reading these newsgroups and making comments, but if this is how you get your jollys, then just have at it, please enjoy yourself.

Hi Guys

We will activate KH0AM during this comming CQ WW PH contest
weekend in Multi/Multi.

The Ops are KH0AM/JE1CKA, AH0K, JA1WSX/KI7QD, JH1GTV/N1SID,
JR1EFG/KU0Q, JF1MIA/KH0A, JE2JCV/WH6CQ, KH0BA(YL!) & JA6VZB/
AH0T. Look for her on 28 SSB or 29 FM!
No 160m operation is planned.

We will fly for Saipan Oct 26 and back to Japan 31st. Some
non contest operations will be expected but not too much.

All QSLs via JE1CKA:
Tack Kumagai, P O Box 22, Mitaka, Tokyo 181
But we will send out QSL cards via the bureau to all the
stations who logged on.

*1:Do not send any QSL request to Saipan address which has been
listed on any (FCC) callsign database. We are not resident and
those mails always cause big problems.
*2:$1 does not cover airmail postage to NA/EU from Japan, ONE
IRC will be appreciated.

Tack Kumagai JE1CKA/KH0AM

NOTES OF INTEREST:

ANTIGUA, V2. A team of Frankford Radio Club will be active during CQWW SSB contest 28-29 October, before and after the test the team will work on all bands and modes with enphasis to the rtty.

GRENADA, J3. From 30 October till November 3rd after taking part to CQWW SSB Contest as J3A K9AJ, W9IXX and KA9RHK will be active from Carriacou Is. (NA147). Activity will be mostly on CW, SSB and RTTY. Qsl via K9AJ.

PACIFIC TOUR. Tomo, JH2PDS/1 advises the following from the Tokyo Packetcluster:"Pacific Tour by JA3JA as follows:
20 Oct - 27 W. Kiribarti T30JA
28 Oct - 30 Nauru C21/JA
Modes: SSB/CW/RTTY
Bands 1.9-28 mhz.

The VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, an digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/(tilde)jukka/webcluster.html

For next week's bulletin send your bandpass to Bob, WB2CJL at W5KSI.#NOLA.LA.USA.NA.

GL de (DX2) Luciano, I5FLN @ ZS5S.ZAF.AF

DX Bulletin 53 ARLD053 EXCERPTS

This week's bulletin was made possible with info provided by Isao, JR1ROJ, Joe, NJ1Q, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

ROTUMA, 3D2/R. The Yamato Amateur Radio Club of Japan will make another try with plans for a November 4 to 7 operation. A typhoon ruined their 1994 attempt.

TUNISIA, 3V. YT1AD will be in Tunisia October 26 to November 3 and will sign as 3V8MM. He will also be in both CQ WW DX Contests as 3V5A. QSL via YT1AD.

QATAR, A7. Thomas, DL9FCQ will be active December 30 to January 14 on 40 through 10 meters. The call sign A71AN/DL9FCQ has been mentioned. QSL via DL9FCQ direct or bureau.

AFRICAN DXPEDITION. Roger, G3SXW, will travel to Ghana, 9G, and Benin, TY, during November. He recently made over 5,500 CW QSOs as 9N1SXW from Nepal.

MOUNT ATHOS, SV/A. Apollo, SV2ASP/A, was heard on 14084 kHz RTTY around 1530z and again around 1930z.

MARSHALL ISLANDS, V7. Tom, AL7EL, has canceled his KH9 DXpedition but will be active as V7/AL7EL October 18 to 25.

PUERTO RICO, KP4. Ramon, KP4VP, will operate PacTOR, AMTOR and RTTY daily from 2200 to 0030z, or perhaps even later. Activity is limited to 20 meters from 14065 to 14099 kHz. Other bands may be added in the future. QSL via KD8IW with SASE, please.

ARUBA, P4. Mike, K4PI, will sign P49I October 24 to 30. He will be in the CQ WW SSB Contest operating 160 meters Single Band. Low bands, WARC and CW will be operated outside of the contest. QSL via K4PI.

SILENT KEY NOTE. QSL Manager Isao, JR1ROJ, sadly reports the passing of Harris, 9M6HF. Harris, an active contester and kind host to many hams visiting 9M6, died September 20 of cancer. JR1ROJ will continue duties as QSL Manager.

oute (double filtered), and can't clear >it up. My other phones are just fine, not a speck of RF on them. They >may TEST them, but =
they still sell them!

Interesting. Acording to some of the reports I have received, RS phones
can be among the best. Are they older models? I believe that they have
only started testing them two or three years back. They don't test every
phone, of course, but according to the head of their radio and
communications department, they only sell models that pass their test.

Do you, or anyone, have any reports on recent RS phones? If they truly
are not up to par, I don't want to continue to get myself in trouble. :-)

I don't see McDonalds asking for a name and address when I buy stuff there. They probably bring in
a heck of a lot more cash that a Radio Shack store would in a day. There are plenty of store out
there that do not require name and address information. Once the sale is in the register, the till
can be balanced at the end of the day. If the money's not there, the cashier has some explaining to
do.

there IS a shareware version, but it's version 6.26 (current versions are 8 &
9) and it makes the internal clock on ALL the PC's i ran it on slow down to
HALF SPEED .... so I don't recommend it... I tried CT's suppport number at
460-8873 and to date have not had an answer (only tried 20-25 times, so maybe
I am not persistent enough)
The order number is a recorder that takes your VISA card number and address,
etc.
The shareware site is ftp.qrz.com/pub/loggers... look for the ct626 ftp
There are other shareware and sample versions of logging software there as well

Mark,
I appreciate your sentiments. But just for the record, I managed to avoid the use of demeaning ephiphets in describing Radio Shack sales people. The emphasis of my post was directed more toward management. The expression to which you refer was posted by someone else.

However since you bring it up, I do find in general that the sales people are suprisingly ignorant of electronics. You are obviously an exception. My guess is that previous experience as a shoe salesman qualifies one to be an employee of that chain.

There has also been some discussion about the quality of the products, and my observation is that the HTX-202 is a pretty darn nice radio, and a bargain at that. If everything they sold was bad, I wouldn't go there. The point is, the main reason people go to Radio Shack is that it is convenient. Having to recite our name, rank, and serial number in the process is NOT, and it makes going there less convenient.

>I have a couple of simple questions regarding CW:
>
> 1. What does full-breakin and semi-breaking mean when
> speaking about CW rigs?

Full break in means that the receiver unmutes *any* time the key is up, even in the gaps between dits and dahs of an individual character. This lets the other station interrupt you at any time. Semi-break in is more like VOX, the receiver mutes when you start sending and doesn't unmute until some (adjustable) time after you quit sending. If you pause for a moment, you can hear again, but otherwise you can't. Semi-break in essentially just automates throwing the TR switch when you want to transmit or listen.

Different amateurs prefer full or semi break in operation. I find the unmuting on key up unnerving, and the rattling of the TR relay annoying. Others like it just fine.

> 2. In CW QSO's, often time the call signs end with a "/" and
> a number. What does that signify.

That's a holdover from the old days when you had to indicate the call district you are operating from. So K4XXX operating at the 4-land address shown on his primary station license would just sign his call, but if he were operating in 9-land he'd sign K4XXX/9 to indicate he was operating out of district. Even if he were still in 4-land but operating away from his primary station address he'd have to sign K4XXX/4. The /number means "portable call-district-number". The FCC dropped this requirement several years ago, along with the need to get a new call if you move to a different call district, but some older amateurs still use the old portable designator. It can be useful in contests where station location matters for score.

>lights in their fields. Albert Einstein won his Nobel prize for something
>he did as an amateur. His profession at the time was patent clerk.

I don't see where Jeffrey said anything about "incompentent bungler." He only notes the reality: not everyone who is an amateur *wants* to achieve professional-level skills. And why should they? I want to be a skillful driver; I don't want to be Mario Andretti. (Or, considering your location, Richard Petty.) What's wrong with wanting to achieve a certain skill level--a level that gives you pleasure--even if it's not the ultimate?

>Demeaning amateurs because they are willing to work without pay

>all the more groundbreaking when they do happen.

Who's demeaning amateurs? Jeffrey's just saying that not everyone who is an amateur wants or needs to acquire professional-level skills. I don't see anything the least bit demeaning there. He didn't say that no amateur *can* acquire a high level of skill.

>Feeding amateurs pap in a magazine is demeaning to their intellect

QST certainly runs a number of articles on circuits that are intended
to be duplicated. But QST also runs articles about both state-of-the-
art technology and, occasionally, blue-sky ideas. I think the
proportion of articles pretty accurately reflects the desires of our
members. Why do I think that? Because we hear from the members and
listen; QST reflects the result.

>I've seen little that is novel or challenging in QST in years.
>QEX was touted as the place for new cutting edge ideas, but
>it too has been sorely disappointing. It has either addressed

Well, Gary, we print what we get. If you want to write up some of
these nontrival, truly important ideas, I'd be delighted to get the
manuscripts. (I've made this offer before.)

>For a field that is so dependent on Maxwell's equations, when

>but where are the articles showing us how to *develop* DSP
>algorithms? Why are we stuck in the two transistor CW transmitter
>paradigm in a day when advanced modulation forms are within
>our reach?

Well, speaking for QEX, we use integral signs--and any other
relevent mathematics--where they are useful. Maybe they've only
appeared in the articles you consider trivial, so you missed them. Why,
we've even been known to print Maxwell's equations. (Of course, that
is 19th-century stuff. Hardly "cutting edge.") And we've run numerous
articles that cover DSP algorithms, accessible DSP development platforms
and other DSP concepts. If you "aren't seeing this," you aren't reading
QEX. Plus, we have articles and a regular column that present RF design,
not only complete circuits, but also design concepts and techniques. In
short, we're attempting to provide QEX readers with the tools to design
and experiment. Could we do it better? Yes, if we got more good material
from the amateur community. But there's plenty of meat to chew on in QEX.

>As amateurs, we each have a choice, we can work on the cutting
>edge or the trailing edge. Trailing edge technology and ideas

>working on newer techniques, QST doesn't seem to be the place
>that would welcome their articles. This may be more perception
>than reality, but it's the editor's job to change that perception.

That's your perception; I don't think it's the common one. But
remember that QST goes to 170,000+ readers, with an almost equal
variety of interests. QST has to serve all those interests, not just
a few. The result is that no single subject gets as much QST coverage
as could be given if we had unlimited resources. That's why we have
QEX, where we can at much lower per-unit cost publish information of
interest to the technical community within Amateur Radio.

>One way to do that is to create columns focused on newer techniques.
>Sure, there's a column touting ARRL's _Radio Designer_ product, but

>columns titled _FM_ and _Packet Perspective_, but no offense to
>the authors, they are wimpy things that don't ignite the fire in
>the belly of the reader to get out there and do things.

Columns are dicey things. Unless the subject of the column is broad,
it's darn hard to come up with good material month after month. For
that reason, it's hard to find good columnists. Hey, I'd love to have
a couple more good columns in QEX. Any takers?

Of course, if we did have columns on RDF and ATV, folks might complain
that those technologies aren't sufficiently cutting-edge to warrant
publication. :-)

>Ah, well, as usual I've gone on far too long, and wandered off the
>original subject. Let me just summarize by saying amateurs don't
>*have* to be poor shadows of their professional counterparts. And
>amateurs don't *have* to work at the trailing edge of technology.
>Amateurs only do so because they don't think that they can do
>better. It's the job of the magazines to exhort them to change
>their thinking, to open and expand their minds, and to teach
>them that newer techniques really are accessable by the amateur.

I think this is our basic point of disagreement. You want amateur
publications to lead amateurs by the nose to where you want them to
go. My approach is to let amateurs say where they want to go, then
try to figure out how to help them get there. That way, I respect

the love amateurs have for their avocation rather than trying to force-feed them something that will, likely, extinguish that love. And I think *you* demean amateurs by suggesting that if a subject doesn't appear in an amateur magazine, amateurs will remain ignorant of it. A constant in publishing amateur material is that amateurs learn about "newer techniques" and import those techniques into their amateur activities. Then, if anyone bothers to write them up, they appear in the amateur press.

While the effort to address reader's needs--as the readers define those needs--will always be imperfect, I believe that approach best serves amateurs and Amateur Radio. Clearly, you disagree. So be it.

But if you want to *do* something about what you perceive as a problem, I have a simple suggestion: write. Write about cutting-edge techniques, and do it often. If you're not filling the publishing pipeline with the material you think needs to be published, you're not addressing the problem no matter how many Usenet articles you post.

Full break-in ("QSK") allows reception in between every dit and dah transmitted. This is, in effect, VERY fast transmit/receive switching. The advantage of this operation is that the "other" station can interrupt the sender at any time to get a fill, or make a comment.

Semi break-in is similar, but a "hang time" elapses between transmission and reception. Typically, the rig will drop back into receive only between words. This results in quieter (to the sender) operation, and many find it less distracting. However, since reception is inhibited most of the time, cw becomes a bit less conversational.

> 2. In CW QSO's, often time the call signs end
> with a "/" and a number. What does that signify.

The "/" can be read as "portable" or "mobile", with the number representing the call district operation is taking place from. The slash mark followed by a DX prefix indicates operation taking place from a country not of your original license (example: KF2T/0 -- me in Colorado, KF2T/VE7 -- me in British Columbia). The "/" is also used to denote "temporary" operation for newly upgraded hams (KX5XCX/AG just upgraded to General Class).

Good questions! Glad someone's interested in CW....

> high school teacher, and all the rest of us *amateur* electronics folks.
> They've done a darn good job for the last 80 or so years.

I agree with your second point, but disagree with your first.

We agree in that QST has to be written for a readership of widely varying interests and skills. This is not bad. Besides technical articles, there is human interest stuff, policy and regulatory discussion, contesting, and so on. Not having been around since 1915, I can't say whether what kind of job QST has been doing all those years. But I've been satisfied with the magazine in the years I have been receiving it.

Where we disagree is in opposing the terms 'amateur' and 'professional'. They are not antonyms! An amateur pursues a subject for the love of it. A professional is paid for the pursuit. In other words, professionals are amateurs fortunate enough to be paid for doing what they love to do.

You aren't alone in using the terms this way, tho. The word 'amateur' >has< taken on a derogatory meaning.

An example: Why should amateur standards of operation be any less exacting than professionals' ? It's really irritating to hear 'I'm only an amateur' or 'It's only a hobby'. The unsaid thought is that if I'm only an amateur, then it's OK to use poor procedure. It's only a hobby, right?

Problem is, when crunch time comes, typhoon, earthquake or whatever, when we really need sharp procedure, we're honked. When Hurricane Luis was cruising the Carribean, I heard an interesting exchange between an amateur station relaying a report out of St Vincent to a Royal Navy vessel on the way to provide relief to the island.
'Roger, roger, roger, British ship, do you copy? St Vincent does not yet copy you. Is that a roger, British ship? Do you copy?'

Sheesh.

See November QST, page 54 ("The WATTS Award"). The author, WA6ISX, rates the Radio Shack model 43-613 as the least-susceptible to EMI of all 2-line phones tested and the 43-585 as the least-susceptible of all 1-line phones tested. He tested Radio Shack, Sony, Panasonic, Bell, AT&T, etc ... quite a variety!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 OCTOBER AND FORECAST FOR 25 OCTOBER - 27 OCTOBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 23 Oct
Daily Proton Fluence >1 MeV: 1.3E+06
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 5.5E+07 (normal)
X-ray background: A6.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Oct 26 Oct 27 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Oct: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled with active levels
12-18 UT

Estimated Indices : A K Observed A Index 23 Oct
Learmonth 13 2132 4432
Fredericksburg 6 20
Planetary 10 19

Observed Kp for 23 Oct: 3534 3333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
25 Oct 10 Quiet to unsettled
26 Oct 8 Quiet to unsettled
27 Oct 8 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
24 Oct Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Oct Normal Normal Normal
26 Oct Normal Normal Normal
27 Oct Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
24 Oct -4

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values.
Townsville: Near predicted monthly values.
Sydney: Near predicted monthly values with sporadic E observed 08-12
UT.
Hobart: Near predicted monthly values with depressions to 30% during
night hours.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
25 Oct 10 Near predicted monthly values
26 Oct 10 Near predicted monthly values
27 Oct 10 Near predicted monthly values

: vehicle with a much bigger radar reflection behind was speeding.
:

That doesn't happen, though. The photo-radar units have a very limited range. Any vehicles that it can detect are right in the center of the photo. If a vehicle is behind you, a photo-radar unit will not mistake you for it.

Subj: Where can i buy??? Area: io.amateur.digital.misc Date: 24/10/95
==========

Hello everybody.
I'm a Spanish ham (ea3clb/eb3eyh are my callsigns).
I'd like to know if there is some place where i can get information
about ham radio equipments, (hf, vhf, uhf, dual band, tnc's), prices,
and, that i can buy them via internet, because, here in Spain, prices
are higer than other countries.

Please, if you know some address (www), let me know.

Thank's in advance...

Divisional news

Divisional News

For the convenience of members, Council has decided that Parramatta office will once again be open Monday nights effective immediately.

Members and non-members can now purchase books, education service kits and morse tapes, visit the library, make enquiries or simply call in for a chat and a cup of coffee -

Monday to Friday 11am to 2pm
Mondays 7pm to 9pm

and even more good news ...

With effect 4 November the office will also be open for a trial period on Saturdays from 10am to 1pm.

Don't forget members get a discount on all book prices and if the book you want is not in stock but is shown on the list in "Amateur Radio", the office staff will be happy to order it for you.

Your Divisional Council working for you ...

Eric Fossey VK2EFY
Divisional Secretary

WIA examinations

Examinations

Nrxt examinations will be held at Amateur Radio House on Sunday 5 November 1995.

Reporting time 12.00 noon.

Applications will close on Thursday 26 October 1995.

Eric Fossey
Divisional Secretary

VK2 WICEN News

VK2 WICEN News

Last weekend's Hawkesbury Canoe Classic went off splendidly, with no major upsets for a change; thanks to all who took part. Next year's event will be held on the weekend of 26-27th October, which

does not appear to conflict with JOTA. Speaking of JOTA, we trust that all WICEN members took the opportunity to show the flag amongst the future Amateur radio enthusiasts.

Next Sunday is the "Troy Newman Cycle Trek", to be run from Sydney to Newcastle. This event raises funds and awareness for "CanTeen" -- the Australian Teenage Cancer Patients Society -- and Hunter WICEN will be providing safety communications; the event commander is Steve Pettet VK2KBL.

Next month is the Emergency Services Display at The Entrance, at a date to be advised, and Andy VK2XRX is in charge. Those who took part in the Canoe Classic are invited to a dinner (for a charge) on Saturday 25th November; Kevin VK2CKD has full details (which were also included in your briefing notes). Those with an eye for advanced training may be interested in the Latrobe Emergency Services seminar, on the weekend of 25-26th November, and further details can be obtained from Morton VK2DEX. Finally, the closing date for the WICEN newsletter is Thursday 30th November, to John Howard VK2AMH, the State Co-ordinator and newsletter sub-editor.

Central Coast WICEN has been invited to take part in next year's "Red Cross Calling Door-knock" appeal, to be held on 17th March 1996, and perhaps other regions could be interested; this information comes to us from Andy VK2XRX.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB. Please note that the VK2AAB system is no longer operating as a BBS.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Magazine Roundup

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the October issues of the various magazines.

"Electronics Australia" carries details of a scam similar to that reported in another magazine, but this time covering motherboards fitted with dummy cache memory; Tom Moffat appears to have been misled over the history of PGP and provides an incorrect name for an archive site (it is actually "soda.berkeley.edu" in the area "/pub/cypherpunks"; WWV listeners can read about the history of the station, along with a postscript about Australia's own station VNG; the PC-controlled sweep analyser is continued; those with a historical bent can read about the "Theremin", which is basically

an audio oscillator tuned by hand capacitance; a sausage-powered clock is described; and there is a story on Australia's youngest Amateur, Ved VK2LAD, who is just eight years old.

"Silicon Chip" describes a Geiger counter for those worried about the state of their genes; WICEN members may be interested in a fast charger for nicad batteries; an advert for a mouse with no balls caught your reviewer's eye; and the story of vibrators in vintage radio is described.

"Amateur Radio" discusses short vertical antennas and the importance of a ground system; a Stealth Antenna Tuning System, radiating minimal RF, is described, although we cannot understand what is wrong with a receiver noise bridge; an effective way of resonating a short antenna is discussed; the trials and tribulations of post-war television, with the shortages of the period, are mentioned; Novice Notes tells some truths about operating upon the VHF/UHF bands; and interference to 2m repeaters from pager transmitters is discussed, along with a fascinating admission from the SMA that they are not obliged to follow ITU recommendations (we wonder whether our vaunted SMA Liaison Committee is aware of this).

"Radio and Communications" discusses the long-forgotten Marconi antennas; satellite television and its requirements are introduced; there is the usual list of modifications to imnprove your equipment; a handy power supply, for both TTL and CMOS, is constructed; and various high-level packet radio protocols are introduced.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

News briefs

NEWS BRIEFS

TREE KILLS MOBILE PHONE USER

SEOUL, South Korea: A man who walked head first into a tree while talking on a mobile phone in the South Korean port city of Pusan has died of head injuries.

A passer by found Koh Il-dong, 36, unconscious on the pavement and took him to hospital last week. He died five days later.

Police said mobile phones in cars had caused many accidents but this was the first known pedestrian mobile phone death.

--Telegraph-Mirror, sent to us by Peter Vernon VK2JPJ

Hewlett-Packard and Nokia Teleommunications are developing a combined palmtop computer and mobile telephone. The new devices will allow users to send and receive fax messages via the GSM communications network.

Meanwhile, Matsushita has developed a mobile videophone, which is designed to work with the personal handyphone system introduced in Japan in July. Personal handyphones differ from cellular phones in that they connect to the normal telephone network instead of to purpose-built exchanges; one benefit is that personal handyphone charges are only a third of those for cellular phones.

Matsushita will not release the product for about two years, however, as the current prototype is five times heavier than a cellular phone and has a short battery life. The company expects to resolve these technical problems in the next two years.

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: St George

From the St George Amateur Radio Society

The next meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Pde and Blakesley Rd., South Hurstville at 7.30 pm next month on Wednesday evening the 1st of November 1995.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

from - Allan VK2XF Public Officer

Club news: Mid South Coast

Greetings from the members of the Mid South Coast Club!
Our next quarterly social gathering and meeting is to be held at Hancock's "H Ranch", Little Forest Road Milton, on Saturday 4th November. To reach the ranch, turn off the Princes Highway 3km north of the historic village of Milton and follow the signs.

We look forward to a good attendance. The site is a spectacular one, our southern hospitality is famous and we welcome visitors,

Arrivals are from 10.30 onward. Bring your family and your lunch. The club provides the tea, coffee, etc.

from David VK2CX, Club Secretary.

Club news: AAPRA

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

The September issue of the AAPRA Newsletter DIGIPEAT is in the mail. It contains much of interest , including details of access to the USA utilising the ROSE Network. Reviews of TNOS 2.01 , JNOS 1.10k and WINPAK4 - a really good packet program for Windows. It describes mods to transcievers to run at 4800 baud and all about packet modems. The rest of it is interesting too. To learn more about AAPRA lodge a message for VK2IN on your local BBS or phone (02) 489-4393.

--From Geoff VK2BQ Publicity Officer.

Club news: AATC

The AATC will hold the next general meeting as usual on the 2nd Sunday of next month - note : at Chipping Norton - near Liverpool.

This meeting, owing to the limited space will be for financial members only and because the area is shared, it will start at noon. The topics covered will be the planning of Wyong Field Day 1996. A technical overview on projected ideas for the club by VK2XOF. A 3.5" floppy will be available with all the club soft ware. Comments from members using this will be welcome for modifications.

For more information on ATV contact Bob on (02) 587-3491 between 4.00 pm and 10.00 pm Monday to Friday.

AATC Inc. Publicity Officer Bob Barnes

Club news: Chifley

Have you been told by she who must be obeyed to get rid of that junk you have been going to dispose of.

Well now you have no excuse but to bring it along to the BOOT sale at the Chifley Amateur Radio Club on Saturday 28th October at 1.30pm.

Location is the Good Shepherd Church Hall, Hyatts Rd. Plumpton, 50m south of Jersey Rd. opposite the Plumpton Markets.

There is no cost involved, just come along with your boot full of that junk you want to dispose of.

See you there on the 28th October at 1-30pm.

Ray Sparks
VK2FKO
Publicity Officer for the Chifley Amateur Radio Club

>Hear, hear!

A few years ago, there was an hour-long documentary on public TV in Oregon, entitled, "They Know Where You Live". It was written by a local investigative reporter, who demonstrated the amazing amount of information that is available on one individual, simply starting with him standing on a freeway overpass, randomly picking one car's license plate number, and having DMV run it (in Oregon, you can obtain information on a vehicle's registered owner for a nominal fee at any DMV). From there, he went on to get the driver's driving record, marital record, family tree, credit record, etc etc etc.

Rather eye-opening what's out there...

>you and help you find what you need.

Good point. I think it's important whether considering the RS employees
or your local McDonald's to not stereotype people. But I have to admit,
it's tough to do when the last salesman at the local RS wasn't exactly
polite to me (I had to say "NO!" three times--the last time making it clear
that I was getting pissed before he'd shut up with the "do you want
a Radio Shack credit card" blurb--to the point I almost walked out),

I have run into a few good RS salespeople, but unfortunately I have to admit
that about half the time, the salespeople make my visits less than pleasant--
to the point that there are a few RS stores I do NOT use anymore.

1175. Where can I find satellite dates ?

I too have the tm-742a with the 28mhz unit and I am having no problem
Reciving over 30mhz. The only problem I am having is that when I tx on
high power in the 28mhz range It locks up the radio. A friend of mine has
the same radio and the recive is fine but he too has the TX problem. I
would check the mod again and make sure you are following the ARTSCI book
and they will work fine.

>Eric Johnson

I'm sorry, but you're wrong.

The Texas Department of Public Safety produced a comprehensive manual based onthe Federal tests.

Among the radar "errors" detailed by the Texas manual:

1. Antenna Positioning Error

The radar beam travels in a straight line, neither bending around curves nor following the contour of hilly terrain. If the antenna is not properly positioned, it may seem to clock an approaching car when, in fact, it's clocking another car in the background.

2. Look-Past Error

Even if the operator aims his antenna properly, radar is still subject to "look-past" error. This is caused by the radar looking past a small reflection in the foreground to read a larger reflection behind. This error is all the more insidious because poorly-trained operators assume it can't happen.

Texas instructors warn, "It is a widely-held misconception that the reflected target signal received by the radar antenna will always be that of the closest vehicle to the antenna. There are times, due to traffic conditions, that the closest vehicle is not returning the strongest signal."

Evidence of the potential size of this error appeared in Car and Driver (October, 1979). The author measured the effective range of a Kustom Signals KR11 traffic radar against various vehicles. The typical small sedan did not show up on the radar until it was less than 1200 feet away from the antenna,

but the same radar unit locked on to a Ford 9000 semi at 7600 feet. This shows how common vehicles reflect microwaves differently.
The Texas instructors confirm this problem with radar, saying "It is not unfair to say that the reading you register could be a larger, better target three-quarters of a mile down the road."
3. Vehicle Interference Error

Because moving radar tries to do a more complicated jog than stationary radar, it is subject to all the errors of stationary radar, plus several additional errors that apply to it alone.

"Vehicle interference" error occurs when moving radar is used in traffic. For example, traffic ahead can confuse the radar's estimate of patrol speed. Moving radar calculates target speed by subtracting patrol speed from the closing speed of the target. Therefore, anything that produces a low evaluation of patrol speed will automatically result in a high speed reading of target speed.
Texas tells its radar operators that this ...."situation becomes more critical if difference in patrol speed and interference-vehicle speed is five to ten mph. A target vehicle moving 61 mph may be recorded at 66-71. These borderline speeds are more difficult to detect with the eye."ey are
an even bigger pain the second time around. - Herb Caen

Exactly right.

I too have a GPS40.

: It's watertight & floats if dropped off a boat.

I think this isn't quite right. The package is too dense to float.
Nor are the units truly watertight. Reminds me of a small HT in size and
density.

Much more discussion in sci.geo.satellite-nav.

: I've seen reports in the nav newsgroup about the Garmin 40 not tracking
: well under heavy tree canopy. I personally have not had this problem. In
: general you will find Garmin, Magellan, and Eagle users to be very
: satisfied. As in the PC vs Mac wars, each likes his own GPS best.

No GPS can work when the satellites are obscured. Again, much more info
in s.g.s-n.

The UALR site is the best for most searching, however, QRZ has a new
search engine that allows masking of callsign.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 25 OCTOBER AND FORECAST FOR 26 OCTOBER - 28 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 24 Oct
Daily Proton Fluence >1 MeV: 4.2E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.7E+07
(normal)
X-ray background: A3.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 Oct 27 Oct 28 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 26 Oct: 75/13
COMMENT: Recurrence suggests high electron fluences are to be
expected during the interval 1-7 November.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 24 Oct
Learmonth 4 1211 2111
Fredericksburg 7 9
Planetary 10 8

Observed Kp for 24 Oct: 3222 3321
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
26 Oct 10 Quiet to unsettled
27 Oct 10 Quiet to unsettled
28 Oct 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Oct normal normal normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Oct normal normal fair
27 Oct normal normal fair
28 Oct normal normal fair
COMMENT: Degraded HF comms conditions expected for mid-high
latitudes after 31 October.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
25 Oct 5

Observed Australian Regional MUFs:
near predicted monthly values at all sites. Townsville, MUFs
were enhanced 40% during the interval 05-08UT. Spread F observed
during local night hours at Sydney and Hobart.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
26 Oct 5 Near predicted monthly values
27 Oct 5 Near predicted monthly values
28 Oct 5 Near predicted monthly values
COMMENT: Degraded HF comms conditions expected after 31 October.

Robert Smits (rs@ham.island.net) wrote:
: The Texas Department of Public Safety produced a comprehensive manual based onthe Federal tests.

By the way, what Federal tests. There were some photo-radar tests a few years ago, but I'd be surprised if the Texas Department of Public Safety produced a comprehensive manual based on them. It would be a waste of taxpayers money. To the best of my knowledge, there are no agencies in Texas that use photo-radar. From about 1986 to 1988, the Galveston County Precinct 8 Constables used a unit. But that was before there were any such tests. The only other uses of photo-radar in Texas has been for demonstration purposes and for development and testing purposes.

If you are in Texas and are worried about receiving a photo-radar ticket, you are wasting your time. You would have a better chance of getting bitten by a rabid dog. Hell. You would have a better chance of getting bitten by a rabid elephant.

That's why you always drive as fast as you can within 10 miles of home,
you want to spend as little time there as possible. ;-}

It's much more likely that the GPS/computer interface does NOT utilize the
strobe signal provided on more costly receivers but not on the cheap
ones. It takes some time after the time code signal is received to decode
it and send it out an RS232 port. The strobe pulse gives you the exact
beginning of the NEXT second beyond the one whose identity you just
received, and it is corrected for propagation delay.

Well, from my perspective, I wish the salespersons would simply ask,

"Would you like to be on our mailing list?", or
"Would you like to receive our catalog in the mail?", or
"Would you like to receive advance notices of our sales?"

BUT...

They DON'T. What they usually say is,

"Name."
"Zip Code."
"Address." (Because they spelled my name diffrently than last time.)

I don't care to get junk mail, so I return the curt statements with:

"I'm already on your mailing list."

Well, if they wanted to have a nicer day, they would not be so obnoxious
to begin with.

cheers-
=paz=

Subject: Re: 2m Handheld Transceiver

>>My recommendation is to go to your local radio store, and pick one
>>that you like best based on price, size, and ease of use. (If
>>you like lots of bell and whistles, buy accordingly. If not, get
>>something simple.)

AFTER, of course, joining your local Amateur Radio Club and seeing what's happening in your area in Amateur Radio.

My first HT was the best unit available for MY use - but would have been useless for a lot of the continent. Only by joining my local clubs and performing a little research did I learn that the Standard C288a (220 only) was the HT of choice - again, for MY situation.

Subject: Need Info!!

>>I am very much interested in getting into HAM-Radio and

What is Ham Radio, and
How do I get started?

A short introduction
by Hans Brakob, K0HB

Here on HamNet we frequently see messages asking for more information about the hobby, and how to get started. This file is a VERY brief attempt to explain the hobby and give some pointers on where to get more information. Almost certainly I won't answer all your questions, so feel free to ask for help on the forum. Hams are famous for their eagerness to help newcomers.

(First I have to explain something you might not have realized. In doing so, I'm going to paraphrase something written by Steve Ford, WB8IMY, in his introduction to a book entitled "The ARRL Operating Manual". Steve, by the way is a regular here on Hamnet. He acts as the ARRL HQ representative.)

In case you didn't know, belief in magic is a necessary requirement for all Amateur Radio operators. Of course, you won't see a question concerning magic or metaphysics on the test you take to obtain your license, but in your heart you will come to believe in that powerful, intangible force.

All of us in the hobby have felt its influence at one time or another. Some night when the band is dead as a doornail you'll be tuning aimlessly, not expecting to hear a single signal because NOTHING could be coming through at that hour. But then, rising out of the noise like a ghost, there will be a faint call from another stalwart explorer thousands of miles distant. You pounce, establish contact and both of you marvel at the fact that the conversation is taking place at all. A few minutes later, however, the signal vanishes as quickly as it came. Your rational mind will shrug it off as a quirk of propagation, but that little tingle in your gut will tell you otherwise.

If you could travel back in time to, say, 1294 AD, you'd probably be burned at the nearest stake for even suggesting that two human beings could communicate with each other over great distances without a physical connection. No

doubt they would accuse you of dabbling in magic -- and they'd be right!

As Amateur Radio operators, we work feats of magic every day. Many of us have become jaded about our powers and we tend to dismiss them as commonplace. We hardly think twice when we use our equipment to sommon the elemental forces of the universe. But every so often we need to pause and remind ourselves of what we are really doing. We need to remember the essence of what drew us to our unusual avocation in the first place: the wonderful magic of wireless communications.

So how can YOU become a magician?

First, you need to prepare to obtain a Magicians License. The Federal Communications Commission calls them Amateur Radio Operator Licenses, and they come in 5 "classes".

There are two "entry class" licenses, namely the Novice and Technician class. These two classes of license are designed to give the newcomer access to a number of frequency bands without a too-strenuous examination.

The Novice class gives the widest range of frequencies, and will be attractive to folks with a desire to talk to "distant" places. The written test is the simplest of all the tests, and the examination also requires you to be able to copy Morse code at 5 words per minute. This license will also give you access to some "local" bands, but not as many as the Technician class.

The Technician class license, as the name implies, is aimed more at folks with a technical bent (you don't have to be an electrical engineer though). The written test is a bit more difficult, but you don't need to know Morse code for this license. The frequency bands for this license give you more "local" communications, although if you wish, you CAN take the Morse test, in which case you will also get access to the "worldwide" bands the same as the Novice class.

The next three classes of license are General, Advanced, and Extra. These three classes have access to portions of all amateur bands, with progressively more difficult exams, and requirements for copying faster Morse code (13, 13, and 20 words per minute respectively).

To prepare for the exams you will need some study material

(Continued from previous message)

and more information about classes, examination points
(the exams are given by volunteer Hams in your community),
and clubs in your area. A number of organizations will be
more than willing to help. One such organization is the
American Radio Relay League. Write them at:

ARRL
225 Main Street
Newington, CT 06111

or call them at 1-800-32NEWHAM.

Ask for their "newcomers" package. It will include more
detailed information, a list of classes and clubs in your
area, and a list of scheduled examinations in your area
also.

If you are near a Radio Shack store, go there and ask for
a book entitled "Now You're Talking". This book is also
available from the ARRL. It contains all the information
you need, including study material and sample questions
for the examinations for Novice and Technician licenses.

Good luck, and welcome to the "magical" hobby.

Robert Smits (rs@ham.island.net) wrote:
: wej3715@tam2000.tamu.edu (Walter Eric Johnson) writes:

: >Robert Smits (rs@ham.island.net) wrote:
: I'm sorry, but you're wrong.

: The Texas Department of Public Safety produced a comprehensive manual based onthe Federal tests.

: Among the radar "errors" detailed by the Texas manual:

: 1. Antenna Positioning Error

On photo-radar, the beam is not down the road. It is across the road at
about a 25 to 30 degree angle. To aim the beam down the road would
require one wild error.

: 2. Look-Past Error

In photo-radar, if there is a car the other side of yours, the
photo is supposed to be discarded. In most cases, the radar will
see two signals there and nullify the picture even if it is already
taken. It can do this because there is two parts to the picture.
In one unit, the picture is taken, and the speed, date, time, and
other information is written on the picture by some tiny LEDs as
the film is advanced. The film is not advanced until a couple of
seconds after the picture is taken. The picture is taken based on
a quick and dirty preliminary analysis. A more complete analysis
is done using all the data instead of the first few readings after
the picture is taken.

: Texas instructors warn, "It is a widely-held misconception that the reflected
: target signal received by the radar antenna will always be that of the closest
: vehicle to the antenna. There are times, due to traffic conditions, that the
: closest vehicle is not returning the strongest signal."

Regular radar instructors, not photo-radar instructors.

: Evidence of the potential size of this error appeared in Car and Driver
: (October, 1979). The author measured the effective range of a Kustom Signals
: KR11 traffic radar against various vehicles. The typical small sedan did not
: show up on the radar until it was less than 1200 feet away from the antenna,
: but the same radar unit locked on to a Ford 9000 semi at 7600 feet. This shows
: how common vehicles reflect microwaves differently.

Is the KR11 traffic radar a photo-radar unit?>
For that matter, photo-radar won't pick up the vehicle until is much
closer. 100 feet is probably pretty much the maximum range.

: 3. Vehicle Interference Error

: Because moving radar tries to do a more complicated jog than stationary radar,
: it is subject to all the errors of stationary radar, plus several additional
: errors that apply to it alone.

I don't believe that anyone in North America uses a moving photo-radar. I
believe there is such a thing, but from my understanding, it is not used
that way, here.

You shouldn't confuse regular radar with photo-radar. You are reading a
handbook for regular radar. It does not apply to photo-radar at all.

: Gary

I wasn't aware that it had been used in Georgia. There's not really
very many places in the US that it has been used. All the cases
that I'm familiar with used manned units -- the radar was mounted
in the back of a blazer or on the trunk of a police car.

To ALL:
I have a TM_742a with the UT-28s module installed. I also have
done the expanded TX/RX on the unit. The unit works fine except on
the 10M side. It seems that the unit can TX up to 45mhz, but it
will not RX over 30mhz. I sent the unit to Kenwood Service Center
East and they said it is up to specs. The problem is that I need
to receive freqs. at 33.94 and lower. I can tranmit there but I
don't need that I just need to receive. These are fire bands and
going to the fire calls without having a scanner in the car would
be a great help.

Is there anyway to fix this problem???
ANY HELP IS GREATLY NEEDED!!!

THanks Robert H&#65533;yvald, KB2UWJ

To me, someone calling CQDX is merely stating his interest in long distance communications. I don't feel slighted or rejected when I hear someone calling CQDX. I have called CQ and CQDX and I have answered even more plain CQ and CQDX calls. On a number of occasions, although admittedly rare, local stations have answered my CQDX calls. This has led to equaly interesting QSOs and I have welcomed these responses just as I would have welcomed responses from DX station. While sweeping the bands, I do not, answer all CQ calls. I may, for instance, not answer a very weak station if I am tired and don't feel like putting in the effort required. I think that for an interesting QSO to take place (or any communication between humans for that matter), there must be a common interest. If someone gives me, through is CQ call, an indication of what he is looking for (such as a DX or a call to Canada, etc...), or of where is interest lies. I may then be in a better position to help him have a contact which he is interested in. Our hobby is about *COMMUNICATIONS* and for communications to take place, there has to be a desire from both sides to engage in that communication. There also has to be mutual respect and that sometimes requires a good dose of tolerance. Tolerance to me is *NOT* trying to impose my views to the rest of humanity. Vive la difference!

1198. HELIAX LDF5-50A coaxial cable characteristics

Newsgroup: rec.radio.amateur.misc

I have come across about 4000 feet of this type of coaxial cable Andrews HELIAX LFD5-50A. The cable is very clean condition other than slight tarnishing between tho outer copper spiral jacket and the foam. This is from condesation, I believe since all the other parts are just like new and the cable was properly pressure capped. I have never cut apart this type of cable before and am assuming this moisture is normal for cable operated in outside enviroment. If you have had first hand experience with this type of cable, I would be interested in you opinions. Thanks for your interest in advance.

What about the back plate picture? Some photo radar units will also
take a back plate picture.

I have a chance to go to Las Vegas next month. Are there any good "candy stores" (ham dealers) there? Anything else to do? Sorry, no interest in the gambling scene.
